*TRS-80 IS A TRADEMARK OF RADIO SHACK, A DIVISION OF TANDY CORP.

DOSPLUS

Experience the Power

"Awesome". The word only begins to describe the power of DOSPLUS 3.5, the latest in the line of popular Disk Operating Systems from Micro-Systems Software, Inc.

Long known for its production of high quality, user friendly operating systems, Micro-Systems Software introduces a whole new breed of DOSPLUS. Version 3.5 explores avenues of power and flexibility previously untouched in TRS-80 DOS.

DOSPLUS 3.5 is the last word in professionally crafted operating systems and combines un-

limited power and flexibility with the same reliable and steady performance you have come to expect from the name DOSPLUS. In short, DOSPLUS puts you in total control. From its parameter rich library, to the many and powerful utilities, to the full featured BASIC, DOSPLUS is THE system for the TRS-80 Model I or III.

Priced at \$149.95, DOSPLUS gives your micro-computer mainframe power without mainframe price. Order yours today and experience the power...DOSPLUS!

- DOSPLUS 3.5's total device independence and completely external device structure allow interface to almost ANY kind of peripheral. Support will be given for hard disks, printers, and non-standard floppy drives.

- In addition, DOSPLUS 3.5 offers many utilities including a menu driven user interface that allows file manipulation at the touch of a key, full file and disk editing utilities, and a directory check utility with optional repair. Standard utilities let you map file locations, restore killed files, or offset file locations in memory.

- DOSPLUS 3.5 also includes one of the best Disk BASIC Interpreters available with any DOS. With exclusive features like controlled screen formatting and label ad-

ressing, DOSPLUS BASIC puts you a step ahead. Single step debugging, global text editing, program cross referencing, and a multi key/multi array sort are all standard.

- The DOSPLUS 3.5 manual will set new standards in documentation. Almost 400 pages of clear, easy reading text that will acquaint you with all areas of system operation. The user's manual is written in English instead of "computerese" and is aimed at both the novice and the experienced user alike. The technical manual clearly documents every part of the system and will prove a gold mine to programmers seeking to interface with DOSPLUS.

ONE

FOR ALL

IE • IBM-PC • APPLE II • TRS-80 • P

Percom Data Corporation has one hard disk drive system for just about ALL personal computers... including of course... IBM-PC, APPLE II, and TRS-80. Percom Data's innovations with 5 1/4" Winchester technology mean that for most personal computers... having a reliable hard disk system is as easy as hooking up a cable.

A Percom Data PHD™ will interface with your present system... and your future system... so if you do change computers, you can still keep your most important investment... your Percom Data Hard Disk Drive.

Because Percom Data helped create the industry standards of today... new designs in software and hardware will make your selection of a Percom Data Hard Disk Drive pay off tomorrow through system compatibility.

A Percom Data PHD works so expertly because we take the time to correctly develop interface software to your computer which leaves no performance holes for you to fall into. Percom Data knows software functionality is the key to hardware performance.

Today, Percom Data PHD supports a variety of software to match your computer:

IBM-PC, PC DOS™ 1.1 OR 1.0

CP/M-86™, CONCURRENT CP/M-86™

APPLE™, DOS 3.3, CP/M™

TRS-80™ MODELS III & I, DOPUS, LDOS

IMAGINE... Percom Data Winchester 5 1/4" technology... for today's computers... and tomorrow's.

To receive an informational booklet describing Percom Hard Disk Systems, or to determine if we have a system for your computer call our Hard-Line Hot-Line at 1-800-527-1222.

We will also give you the name of a nearby authorized Percom Data Dealer. Dealer inquiries are welcome.

The left bracket, [, replaces the up arrow used by Radio Shack to indicate exponentiation on our printouts. When entering programs published in 80 Micro, you should make this change.

80 formats its program listings to run 64-character lines wide, the way they look on your video screen. This accounts for the occasional wrap-around you will notice in our program listings. Don't let it throw you, particularly when entering assembly listings.

Article submissions from our readers are welcomed and encouraged. Inquiries should be addressed to: Submissions Editor, 80 Pine Street, Peterborough, NH 03458. Include an SASE for a copy of our writers' guidelines. Payment for accepted articles is made at a rate of approximately \$50 per printed page; all rights are purchased. Authors of reviews should contact the Review Editor, 80 Pine Street, Peterborough, NH 03458.

Manuscripts are welcome at 80 Micro. We will consider publication of any TRS-80 created material. Guidelines for publishing authors are available. Please send a self-addressed envelope and ask for "How to Write for 80 Micro." 80 Micro is published monthly by 1001001 Inc., a subsidiary of Wayne Green Inc. Cover by Chris Demerest

After watching *80-US* magazine cozy up to Radio Shack, I was surprised to see the editor finally turn and bite the hand that has been feeding him. And a vigorous bite it was...opining that Radio Shack has a "stodgy image." He wants them to plunge into a high-priced television battle with Texas Instruments, Apple, Atari, Commodore, and IBM. Oh tsk, tsk.

The Radio Shack decision not to pour millions into a television campaign and fight commercial-for-commercial may be a good one. Remember that the average consumer is unequipped to make a rational decision among the various computers. The fact is that it is often difficult to get experienced professionals to offer any clear guidance when it comes to computer selection. This will remain, for a while, more of a theological matter than one arguable with facts.

Radio Shack has for years depended more on local newspaper ads than national media. I'd say that as long as the bean counters can show they get more sales per invested ad dollar with co-op newspaper ads than they do with almost unmeasurable television ads, they should put their money where it does the most good.

No reputable ad manager is going to embark on a campaign without doing some tests first. With magazines, you try a relatively small direct-mail shot at a few subscribers and get an idea of what percentage you are going to pull. Then you buy your yearly ad contract, investing perhaps \$50,000 or more. A test like this can cost as little as \$500 and save tens of thousands.

Experimenting with television is a lot more expensive. The 30-second commercial can easily cost \$25,000; some go to 10 times that. But the test to measure the impact in one area of the country is not a big deal...and, just as with the magazine ads, is well worth the actual cost before millions are invested in a national campaign.

Most firms make these local area tests first. I'm sure that Radio Shack is trying things like that here and there, looking for some formula that is a winner. Once they have an ad that pulls well for them, they can run it for the country and win big.

But I doubt if, as suggested elsewhere, trying to answer the claims of other manufacturers is appropriate.

Tandy— TV or not TV?

No, you sell your products best if you point out the benefits in your TV ads and get the folks into the stores to shop. If you really have a strong story to sell over other systems, then handle that in computer-oriented magazines—where people turn to make this sort of decision—and via literature in the stores.

Advertising is only a gamble if you don't know what you are doing. If you are working with an expert, you will find him testing every inch of the way before he puts up the big bucks. In that way, he'll know just about what sales a campaign is going to generate before he goes into it. A big outfit like Radio Shack, which does use TV around Christmas time, will use TV when they know it is the best thing to do, and not because some editor is whining for them to blow money.

There is some question about the need for trying to go head to head against T.I., Commodore, Atari, and the other low-end computer firms. I will be surprised if those firms don't knock each other out in a year, with no real winner. If Radio Shack can stand back and let 'em murder each other and aim more at the long haul, it may be the smart move. Of course, this is based on the guess that the el cheapo computers, without adequate information and software support, will go the way of the video game and hula hoop fads. Seems likely to me.

Those Antique Cassettes

The Load-80 programs have been produced in both cassette and disk form for several months. Despite the higher price, the disk sales have been increasing every month. Let's make a try at being reasonable about this whole thing, eh?

The purpose of the Load-80 program dumps is to save you an incredible amount of time typing in the program listings from *80 Micro*. With the Load-80 tapes you can load a good many of the programs from an issue of the magazine. This is a lot better than spending a couple of hours typing in the program and then several more extremely frustrating hours trying to find where you made your typing errors.

Now I'll grant you that getting Load 80 on a disk will allow you to load things a whole lot faster. But you're paying heavily for the convenience with the increased cost of the disk version. It's \$10 more, which is the difference between the cost of a disk and a blank cassette...plus a bit additional because disks are more expensive to duplicate and package than cassettes.

One other factor that many users seem to overlook is the importance of the back-up disk. As soon as you get a disk, you want to make sure that you have a back-up, just in case. Okay, add in the cost of that back-up, too. If you'd bought the cassette version and loaded it onto part of a disk, you could put away the cassette and have it handy should anything blow up. The cassette is easy to store and index, and remarkably safe from the magnetic disasters that hit disks.

One of the favors the Apple people have not done for their users is getting rid of the cassette interface, thus automatically adding from \$5 to \$10 to the cost of every program bought. Radio Shack did a similar disservice to Model II owners. This was even worse because the system uses the even more expensive 8-inch disks.

There may be a market out there for a cassette interface board for the Model II (and for the Apple). It would pay for itself in a short while, first by cutting the cost of program interchange, and second by providing a much lower cost medium for storing data and programs that are not often used. I'd sure hate to put some valuable data on a disk for archive storage. ■

THE SWITCH

SWITCH TO 5¹/₈" DOUBLE DENSITY

LNDoubler 5/8

FEATURES

- 5- and 8-inch* disk drives
- Single- & double-density
- Any size and density in any mix
- Read Model I, II* and III disks
- 5- or 8-inch* system disk
- Single & double sided disk drives
- DOS+ 3.3.9 included, with Disk BASIC.
- 6 month warranty
- Up to 3.75 megabytes online
- Easy installation - plug-in & run
- Analog phase lock loop data separation
- Precision write precompensation
- Regulated power supply
- Guaranteed operation at 4MHz
- All contacts gold plated
- Solder masked & silk screened
- Runs under DOS+ 3.3.9, TRSDOS 2.3, NEWDOS 2.1, NEWDOS/80 1.0, LDOS, NEWDOS/80 2.0, and ULTRADOS
- Reads 40- and 35-track disks on 80-track drives
- FD1791 controller + your FD1771
- Fits Model I expansion interfaces
- Fits LNW expansion interfaces
- Track configurations to 80-tracks
- 5 inch disk storage increased to:
 - 161,280 bytes - 35-track SS/DD
 - 322,560 bytes - 35-track DS/DD
 - 184,320 bytes - 40-track SS/DD
 - 368,640 bytes - 40-track DS/DD
 - 368,640 bytes - 80-track SS/DD
 - 737,280 bytes - 80-track DS/DD
- 8 inch disk storage increased to:

591,360 bytes - 77-track SS/DD
1,182,720 bytes - 77-track DS/DD
SS: single-sided DS: double-sided
SD: single-density DD: double-density

COMPLETE - The LNDoubler 5/8, switches your Model I or LNW-80 into the most versatile computer you can own. The LNDoubler's switch allows you to boot from 5- or 8-inch system disks, and it's accessible from outside the interface. The LNDoubler 5/8 comes with a double-density disk operating system (DOS+ 3.3.9), complete with BASIC and utility programs... ready to run your software NOW!

VERSATILE - Whether you want single-sided, double-sided, single- or double-density, 5- or 8-inch operation, complete versatility is here today! Any combination of 5- and 8-inch disk storage is possible with the LNDoubler 5/8. Each of your present 40-track, single-sided 5-inch drives will store up to 184,320 bytes (formatted storage) - that's an 80% increase in storage capacity for only half the cost of just one disk drive. With three 8-inch double-density, double-sided drives your Model I will have 3.75 Megabytes of online storage - that's more storage than a Model II or Model III!

ADVANCED - The LNDoubler 5/8 is the most technically advanced, tested and reliable double-density

board you can buy. The LNDoubler 5/8 has more features, more options and more software support than any other product of its kind.

EASY TO INSTALL - The LNDoubler 5/8 is easy to install. There are no traces to cut, no wiring to do, just a screwdriver and a few minutes of your time is all that is required. The instructions are fully illustrated for all interfaces. In minutes you will be 'up-and-running', and enjoying your computer as never before.

COMPARE - Compare features, compare quality, compare value, and make the SWITCH today!

Immediate delivery from stock - at your dealer NOW for only

\$ 219.95

DEALERS - You too can make The Switch.

In a relative sense, microcomputer programming techniques have come a long way since the micro arrived.

But we too often assume that computers and programming did not exist before micros came along, that FOR...NEXT loops, multi-dimensional arrays, and editor/assemblers were devised by and for microcomputer users. The truth is that most programming techniques and languages were developed long before micros made the scene in 1975.

Another truth is that we microcomputerists have spent the last eight years more or less re-inventing the wheel, learning to do on micros what programmers of large computers were doing in the 1950s. This is one reason why mini-computer and mainframe people snickered at micros for so long. They had been using structured programming, subroutines, and arrays for decades and couldn't understand why micro programmers thought such techniques were something new and exotic.

What the mainframers failed to realize was that micros were being acquired by people with no formal training in programming. We learned as we went along, "discovering" concepts and techniques that had been in use for 25 years.

As more people became familiar with the intricacies of computer operation, they used their experience as a base on which to build their knowledge. Features and commands long a part of mainframe applications were adapted to the microcomputer and incorporated as programming options. As a result, today's micro capabilities are more sophisticated and powerful. Today the mainframers have stopped laughing. Micros have come into their own.

The business community is a good barometer of this. Applications formerly the exclusive domain of mainframes and minis, like data base management, accounting functions, production control, and economic modeling can now be effectively handled, albeit on a smaller scale, by micros.

Computing power has moved from the cloistered back rooms of data processing departments into the front office. Chris Christiansen of The Yankee Group, a Boston-based consulting firm, estimates that 4.8 million micros will be used in the office by the end of 1983.

But as micros proliferate in business, are their new-found capabilities utilized

Technology transfer and the micro

to the fullest? Tom Willmott, project manager of International Data Corp.'s Strategies for Office Planning, thinks not. At IDC's 1982 Information Processing Industry Briefing Session, Willmott described the introduction of the microcomputer into the office as hindering information management and upsetting the traditional role of data processing professionals. Management professionals want to take advantage of the processing power of micros, but lack the technical background to do so. As a result, pressure is put on the data processing department to fill this information gap.

DPers find that they not only have to provide the technical know-how to maintain and support conventional large-scale data processing equipment; they now have to provide support for a whole range of new systems, including microcomputers.

So we're at a position where microcomputer technology exists to make versatile computing power available to applications-oriented individuals, but we're at an impasse in transferring that technology to the human operator so it can be used to its full advantage.

A parallel exists between this situation and the personal use of microcomputers. Here, too, the technology exists, but the use of that technology is often hindered by a lack of knowledge.

It's impossible to foretell how the problem of technology transfer will be resolved. Already we have made enormous progress; witness the interest recently generated by the West Coast Computer Faire, the spring Comdex show, and this month's National Computer Conference.

The solution to technology transfer is probably more complex than any of us realize right now, but it might start with user's groups, more conscientious manufacturer support, or magazines like *80 Micro*. ■

Bar Code Fever

I'd like to see a bar code reader series including:

- A hardware project to adapt the HP-wand reader to the TRS-80 or to build one from scratch.
- Software to support the reader.
- Software and printer specifications to print data or programs in a bar code format.

It would generate great interest if you printed bar code versions of the programs published in the same issue of *80 Micro*.

*Eric A. Ziercher
155 Harford Road
Dryden, NY 13053*

Anyone out there doing any work with bar code readers?—Eds.

For LNW Users

While more programs are becoming available for the LNW-80 all the time, support for LNW's special features is still lacking. One additional source of LNW-80 technical and programming information is available through our user's group's bimonthly newsletter.

Subscriptions to the newsletter are \$12 per year. You can contact the user's group at the address below.

*Jay J. Hokanson

Grand Island, NE 68801*

Tandy Reliability

We like Tandy equipment. Our company uses a Model 16, and we have found it to be most reliable. Our machine has not had one microsecond of down time in over six months of heavy use. This reliability is a plus in the Model 16's favor that you constantly overlook when you take potshots at Tandy.

Your articles, information, and editorials about Tandy are one-sidedly pejorative. This would be understandable if your differences with that organization were all well-founded; however, not all of them are.

Tandy has been most supportive of our needs. With regard to program and

operating-system updates, software help, and hardware changes, they have done more than any other company to treat us as a valued customer.

I agree that large corporations should be prodded when they display a lack of awareness over product problems. In our experience, Tandy does not fall into this category. On the contrary, we find that they do not neglect their obligations.

I have yet to find better machines than the Model 16 or Daisy Wheel II, a better word processor than Scripsit, or a better customer-service setup than the numbers in Fort Worth! We have product reliability, excellent software, and good technical support.

Such factors are not indicative of a corporation bereft of ethics, as you infer in several articles in the February issue.

*John J. Esak
Nexus Inc.
50 Chuckanut Drive
Oakland, NJ 07436*

Supporting Software

I agree that piracy can be a problem for software producers and distributors. I've written rather complex programs myself, and am aware of the tremendous effort involved in writing and debugging them. With more complex and therefore more expensive programs, the improvement process should never stop.

Herein lies the best software protection available: continuing development, enhancements, and debugging. With these available only to registered owners, the pirate will soon be left behind.

Indeed, the software artist who markets a program of any complexity at more than a nominal price and doesn't provide continuing support deserves to get clobbered. He has abandoned his product in the marketplace. I don't contend that continuing support should be free, but it must occur.

I have a number of programs that are pirated, but anything I'm serious about I buy because I want on-going support. Before I'll buy a program, I usually start with a pirated copy to see how it performs.

Please don't misunderstand me. I am neither supporting nor advocating piracy. I am seeking a way for the customer to determine if software is suitable before, rather than after, a purchase. A 15-minute demonstration and pep talk by a salesman won't do.

The two DOSes I haven't paid for went through anywhere from several days to nearly three weeks of shake-downs before they proved unreliable with my software.

I'm hoping that out of this dilemma will emerge something to protect not only the rights of the software producers and distributors, but the rights of the purchasers as well.

*Richard Torgerson
17 Surrey Lane
Decatur, IL 62526*

AND/OR?

In the February 1983 *Input* (p. 22), William T. Faulkner points out that the XOR function can be emulated in Basic by ANDing two input values with each other's inverse and then ORing their results. This is correct, but I have been using a simpler approach.

When you perform an XOR, you OR the two values and then drop those bits that are set during an AND of the original values. Mr. Faulkner's $C = (A \text{ AND } (\text{NOT } B)) \text{ OR } ((\text{NOT } A) \text{ AND } B)$ can be shortened to $C = (A \text{ OR } B) - (A \text{ AND } B)$.

*David R. Goben
Lecoma Star Rt. Box 30
Rolla, MO 65401*

The Key to Disk Basic

The following modifications to Don Rigg's "Autokey" (*80 Micro*, December 1982, p. 280) allow you to use the program under Model III Disk Basic.

First, delete lines 100-440 of the Assembly listing and enter Program Listing 1. On line 870, replace the Return command with a Jump com-

AN IMPROVED VERSION of
the WINNER of THREE
80 MICRO READERS' CHOICE AWARDS

The NEW AIDS-III™

by SofTrends, Inc.

- 1. TRUSTWORTHY.** A bad diskette or an undependable machine can ruin your whole day. The NEW AIDS-III checks itself. If something's wrong, it tells you, instead of turning on you like a mad dog.
- 2. GENEROUS.** The NEW AIDS-III doesn't use BASIC. But it does use the memory BASIC uses. And to make the most out of that extra memory, it selectively compresses bytes into tiny bits. It all adds up to more usable data records. Up to 3 times as many.*
- 3. THOUGHTFUL.** The NEW AIDS-III never treats you harshly. If one keystroke will do, it won't ask for two. The NEW AIDS-III remembers things like report formats, search strategies and file names. So you don't have to. It even reminds you, gently, to save your important data.
- 4. INTELLIGENT.** The NEW AIDS-III is smart. It doesn't waste your time with questions about record sizes, field counts and other technical mumble-jumble. A new system can be created, or an old one modified, in a couple of minutes. Even if your name isn't Albert Einstein.
- 5. KIND.** The NEW AIDS-III is always ready to help. It says so, on every screen display. HINTS™ (Help INDEXed To Screen) tells you on which page in the NEW AIDS-III manual to look for more information. The manual is easy to understand and easy on the eyes.
- 6. QUIET.** If you hit the wrong key, you won't hear any annoying buzzes, clicks or chirps. Instead, FLAWS™ (FLash-Annunciated Warning System) will create a striking visual effect. But only for an instant. And without affecting any of the text on the screen. Guaranteed to catch the eye of the fastest touch-typist.
- 7. ALERT.** If the NEW AIDS-III is left alone, it lets you know it missed you. It worries about your important data. After several minutes of no activity, the NEW AIDS-III creates a striking visual display to get your attention. Touch any key to let it know you're still there, and it stops. For a little while, anyway.
- 8. LEAN.** There's no fat in the NEW AIDS-III. That's because it uses SofTrends' proprietary PMX™ system architecture. Small, lightning-fast, reliable. Lean? Yes. Mean? Definitely not.
- 9. FAST.** Searches and sorts hundreds of records in seconds. Screens are displayed in the blink of an eye. Disk access rates approach one-thousand characters per second. No waiting for "garbage collection". The NEW AIDS-III lives fast. Up to 10 times as fast.*
- 10. REASONABLE.** At only \$79.95, the NEW AIDS-III is very reasonable. Down-right inexpensive, if you value your time. Join the thousands of AIDS owners around the world. Order yours today and put the NEW AIDS-III data management system to work for you.

* As compared to MTC AIDS-III, Version 1.0

NEWDOS/80-Version 2.0
you need

BREVI-T™

by SofTrends, Inc.

If you have trouble remembering command formats, want to simplify use of DOS, do a lot of program development or just want to be more effective with your TRS-80™, then BREVI-T is for you. Abbreviations can be defined for both DOS and BASIC. These are automatically expanded as part of the command line processor. Optionally, parameters may be defined as part of an abbreviation. For example, "F 1" might be used to FORMAT drive 1. Change the 1 to a 2 and FORMAT drive 2. It's that simple. Complete with easy-to-follow instructions, examples and a sample abbreviation file.

Specify Model I or Model III \$19.95

Let your TRS-80™ Test Itself With THE FLOPPY DOCTOR & MEMORY DIAGNOSTIC

by David Stambaugh

A complete checkup for your MODEL I or MODEL III. THE FLOPPY DOCTOR-Version 3 completely checks every sector of single or double density 35-, 40-, 77-, or 80-track disk drives. Tests motor speed, head positioning, controller functions, status bits and provides complete error logging. THE MEMORY DIAGNOSTIC checks for proper write/read, refresh, executability and exclusivity of all address locations. Includes both diagnostics and complete instruction manual.

SYSTEM DIAGNOSTICS \$24.95
For MODEL III \$29.95

mand to 59C8H for TRSDOS, 5F79H for NEWDOS, or 02B8H for LDOS. Insert Program Listing 2 between lines 1120 and 1130.

Mr. Rigg used lines 2790-2810 to custom-design an additional one-key command linked to the Z key. To retain this feature, change line 2790 to read: DEFM '2FORI=1TOLEN(Z\$):POKEI+&Hnnnn. In place of the nnnn, use the memory address at which line 2780 assembled.

I also deleted the auto-start routine in lines 2860-2910 because I no longer use a cassette.

Now that you have changed the program, give it the file name DISKEY/CMD and enter the Basic program in Program Listing 3, using the file name DISKEY/BAS. To run DISKEY/CMD in Basic, type RUN"DISKEY/BAS". Line 20 will require changes under operating systems other than Model III TRSDOS.

Jack Blum
Rt. 1 Box 1025
Orland, CA 95963

Mr. Rigg's article also contained a Basic version of Autokey. This letter does not modify the program to work with disks.—Eds.

Colorful West Virginia

We have now formed a TRS-80 Color Computer User's Group in the Morgantown-Fairmont West Virginia area. For more information, contact me at the address below or call 304-599-4493.

Donald G. Barber, Jr.
P.O. Box 295

LPVIII Graphics

Many of you would probably like to have your LPVIII print graphics as they appear on the screen. The subroutine in Program Listing 4 will do just that.

The LPRINT statement in line 1000 initializes the printer. You can change the CHR\$(number) in line 1030 to any of the graphic code numbers, from 225-255. The CHR\$(128) in line 1030 prints the required blank spaces.

Jin Hanson
39723 Aub-Enum Hwy.
Auburn, WA 98002

```

Program Listing 3

LNW Bulletin Boards

Two bulletin boards are operational in support of the LNW-80, one at 504-291-4331 and one at 516-924-8115. These bulletin boards contain a listing in download of little-known but important engineering change notices from LNW Research. The service also contains information on new, exciting, and inexpensive graphics software.

With the gradual disappearance of the Model I, I consider the LNW-80 the new frontier with abilities yet to be explored.

Larry Davidson
P.O. Box 592
Bothell, WA 98011

Printing Labels

Since the publication of "Making Labels" (80 Micro, Anniversary Issue 1983, p. 240), I have changed several lines of the program to simplify

adaptation for printers other than the Heath H-14.

First, delete line 835. Then change line 240 and add line 245 as shown below:

```
240 A$=INKEY$:IF A$="" THEN 240
    ELSE IF A$=CHR$(8)PRINT
    A$;:GOSUB 2000:IF BS<1GOTO220
    ELSE GOTO240
245 IF A$<>CHR$(13)THEN
    TS(J)=TS(J)+A$:IF LEN(TS(J))>ML
    THEN TS(J)="" :GOTO220 ELSE
    PRINT A$;:GOTO240
```

If your printer is not a Heath H-14, modify line 840 to: LPRINT TS(J) and change line 780 to: LPRINT"TEST LINE";J.

Lines 710-750 are specific to the Heath printer in that they set type size and lines per inch; you can delete or change them if you use a different printer.

The statement OUT 251,n is the same as LPRINT CHR\$(n) and is valid only for the Model III. Model I users must change all OUT 251,n statements as above.

One minor error appears in the original listing. Line 600 (for cassette users) should read T=INP(240):IF T=255 GOTO 1500.

William A. Nelson
1354 Hackett St.
Beloit, WI 53511

```
1000 LPRINT CHR$(18);CHR$(10);CHR$(27);CHR$(14);
1010 FOR H = 0 TO 47
1020 FOR W = 0 TO 127
1030 IF POINT(W,H) THEN LPRINT CHR$(255);ELSE LPRINT CHR$(128);
1040 NEXT W
1050 LPRINT ""
1060 NEXT H
```

Program Listing 4

REAR GUARD

Deadly waves of enemy Cyborg craft attack your feet from the rear. You are the Mothership's sole defender. You have unlimited firepower, but the Cyborgs are swift, nimble attackers. Your abilities are tested hard in this game or lightning fast action and lively sound from Adventure International. Price: B

STRIKE FORCE

As the primary defender of a world of cities under deadly alien attack, your weaponry is the latest rapid fire missiles, long range radar, and incendiary star shells. Your force field can absorb only a limited number of impacts. A complex game of strategy, skill and reflexes from Melbourne House. Price: A

PANIK

Trapped at an enemy building site, your fate seems certain. Your laser is empty and evil Mzors are closing in. You'll have to climb ladders and think one step ahead of the various monsters. A challenging game for agile minds. From Fantastic Software with voice (Disk has larger vocabulary). Price: B

SEA DRAGON

Your submarine, the U.S.S. Sea Dragon, penetrates a mined enemy channel. Armed with missiles and torpedoes, you engage the enemy while navigating unknown waters. Succeed or come to a salty end in this game. 29 screens of horizontally scrolling seascape and sound from Adventure International. Price: B

As you can see, all the best games from the top producers are joystick compatible. These games are fun without the joystick but we hope that you are one of the many thousands who enjoy the advantage of real joystick action.

Now you can deduct up to 20% on the price of games: buy any 2 games deduct 10%, buy any 3 games deduct 15%, buy any 4 games deduct 20% from game prices.

TOP TEN

1. SCARFMAN - All time favorite
2. PANIK - Remarkable Voices
3. PENETRATOR - Rave reviews
4. ARMORED PATROL - Super 3D graphics
5. CATERPILLAR - Good rendition
6. CRAZY PAINTER - Unique game concept
7. DEFENSE COMMAND - Tough struggle
8. STELLAR ESCORT - Fast and Challenging
9. ROBOT ATTACK - With voice
10. SEA DRAGON - Amazing "Seascape"

STELLAR ESCORT

The latest super action game from Big Five. As the Federation's top space fighter you've been chosen to escort what is possibly the most important shipment in Federation history. The enemy will send many squadrons of their best fighters to intercept. With sound. Disk version has voices. Price: A

ROBOT ATTACK

Talks without a voice synthesizer through the cassette port. With just a hand laser in a remote space station you encounter armed robots. Some march towards you, more wait around corners. Careful! The walls are electrified. Zap as many robots as you dare before escaping to a new section. More robots await you. Price: A

LUNAR LANDER

As a vast panoramic moonscape scrolls by, select one of many landing sights. The more perilous the spot, the more points scored -- if you land safely. You control LEM main engines and side thrusters. One of the best uses of TRS-80 graphics we have ever seen. From Adventure International. With sound. Price: A

SUPER NOVA

Asteroids float ominously around the screen. You must destroy the asteroids before they destroy you! Big asteroids break into little ones! Your ship will respond to thrust, rotate, hyperspace and fire. Watch out for that saucer with the laser! As reviewed in May 1981 Byte Magazine. Price: A

OUTHOUSE

You are the mighty protector of this small (but important) wooden structure. For reasons unknown, a bizarre gang of miscreants wish to vandalize, loot and otherwise destroy the little "half moon house." Your patrol craft has lasers and smart bombs to deal with this terror. From SSM with sound. Price: A

GALAXY INVASION

The sound of the klaxon is calling you! Invaders have been spotted warping toward Earth. You shift right and left as you fire your lasers. A few break formation and fly straight at you! You place your finger on the fire button knowing that this shot must connect! With sound effects! Price: A

LASER DEFENSE

In this game of ICBM's high-energy lasers and particle beams, you control the U.S. strategic defense satellite system. From your viewpoint high above the globe, you intercept Soviet nuclear missiles in flight and attempt to destroy their scattered missile silos. With sound from MED Systems. Price: B

CHICKEN

Will the chicken cross the road? That's up to you. Can you guide these helpless little chicks across the perilous 10 lane super highway to safety? Or will you bumble, littering the blacktop with a storm of chicken leathers? A humorous yet challenging game of nerves from SSM with sound. Price: A

PENETRATOR

Soar swiftly over jagged landscape swooping high and low to avoid obstacles and enemy missiles attacks. With miles of wild terrain and tunnels to penetrate, you're well armed with bombs and multiple forward missile capability. From Melbourne House. Features sound, trainer mode and customizing program. Price: C

DEFENSE COMMAND

The invaders are back! Alone, you defend the all important nuclear fuel canisters from the repeated attacks of thieving aliens, repeatedly. An alien passes your guard, snatches a canister and flies straight off. Quick! You have one last chance to blast him from the sky! With sound and voice. Price: A

BOUNCEOIDS

Huge boulders career off the walls. You're in the middle in danger of being flattened. Keep your wits about you as you blast these "bounceoids" from the screen. Large ones break into many small ones. Clear a screen, and enter a fast-paced challenge stage with a chance for big bonus points. From the Consoft Group. Price: A

SCARFMAN

This incredibly popular game craze now runs on your TRS-80! It's so hot, it's eaten! You run Scarfman around the maze, gobbling up everything in your path. Try to eat it all before nasty monsters devour you. Excellent high speed machine language action game from the Consoft Group. With sound. Price: A

ARMORED PATROL

A realistic tank battle simulation. Your view is a 3-D perspective of an alien landscape. Maneuver your T-36 tank to locate and destroy enemy tanks and robots that fly hidden, ready to assault you. Clever graphics create the illusion of movement and dimension. From Adventure International. With sound. Price: B

CATERPILLAR

An arcade favorite! Stop these multi-sectioned crawlers before they creep down through the mushrooms. Zap one and it splits into two smaller bugs, each with its own sense of direction. There are moths and tumble bugs too. It all adds up to lots of fun for kids and adults alike. From Soft Sector Marketing. With sound. Price code: A

CRAZY PAINTER

You have to paint the floor white. We gave you the paint and brush. Sounds easy? Hah! You'll be confounded by slay dogs, snakes, sloshing buckets of turpentine, even a ravenous "paint eater." A crazy, imaginative new game with ten selectable levels of skill for new or seasoned game players. Lot's of laughs. Price: A

Program Listing 5

Cassette BASTEP

"BASTEP" by Alan D. Smith (80 Micro, January 1983, p. 352) is excellent for debugging Basic programs. To use the Assembly-language version for a 16K cassette system, renumber line 120 as 125 to make room for new lines.

Then make the changes and additions in Program Listing 5.

BASTEP is now located at the top of 16K memory and can be relocated by changing the addresses in statements 110, 111, and 117 by equal displacement.

By adding 16384 to each address, you

place the program at the top of 32K memory. This allows placement below any other Assembly-language programs that might be stored in memory.

This program also runs on the Model III. Ignore the syntax error that appears after loading the program.

Bremerton, WA 98310

Model 16 Update

While I like seeing coverage of the Model 16, Jim Hawkes' article, "The Model 16" (80 Micro, February 1983, p. 228), has several problems.

The 68020 has 32 data lines, but only 24 address lines. The 68032 will have 32 address lines.

Since I've used a set of stand-alone, 8-inch drives for some time, I believe I am inserting disks in my Model 16 right side up: label at the top outer corner and facing me. The Model 11 is upside down.

Only the run-time environment of the multi-user operating system will be free. This lets you run turnkey application packages. The development package will include a full C compiler and cost about \$700. It is Xenix, Microsoft's licensed UNIX with extensions. Tandy is not writing their own 16-bit operating system.

Radio Shack has announced that they will sell and support CP/M 3.0, also called CP/M Plus, for the Models 11, 12, and 16. This version supports bank-switched RAM for the Z80.

They have not announced support of CP/M-68K, the Digital Research operating system for the 68000 CPU. CP/M-68K is written in C and should be available from a third party.

I have not found a way to emulate four single-sided drives on my two double-sided ones, under either TRSDOS or CP/M.

Multi-user Cobol, as well as Fortran and an expanded-address Basic, will be added to C as Microsoft brings them up. High-level languages will be plentiful under Xenix.

UCSD Pascal and the rest of the p-System Version IV (Fortran, Basic, Lisp) are already up and running on the 68000 in a Model 16.

At this time, I don't know if the expanded card cage in the Model 12 (six

slots) will fit the Model 16, or be an external option.

Incidentally, the Model 12 cage is accessible to the user through a two-thumbscrew panel in the back that is not sealed. Also, the new keyboard should fit the old II/16 units with a female/female adaptor. The new keyboard has the cable attached, whereas the old had a socket for the cable from the cabinet.

At last we have nonproprietary operating systems and user access.

Hawkes Replies

I agree that the phrase "true 32-bit device" is a bit strong as applied to the MC68020. However, I believe that the 68020 would be considered by most as a 32-bit CPU despite having only 16 megabytes of addressable memory.

Second, I think that most 80 Micro readers would agree with my statement

Error Trap

The Color Key (80 Micro, March 1983, p. 34) gave the wrong address for Nelson Software. The corrected version is as follows: 9072 Lyndale Ave. S., Minneapolis, MN 55420, 612-881-2777. For orders only, call 800-328-2737.—Eds.

regarding the insertion of the Model 16 disks.

Also, the article specifically stated that the "CORE" system would be free. Finally, this article was written in September 1982, and at that time little real software was available to report.

Jim Hawkes

Charleston, SC 29424

Color Save

In Feedback Loop (80 Micro, March

1983, p. 414), Terry Kepner recommends buying a copying utility to CSAVEM a machine-language program on the Color Computer. It is much easier to enter the following commands from the keyboard after you load the program.

```
<?PEEK(487)*256+PEEK(488)>
<?PEEK(126)*256+PEEK(127)-1>
<?PEEK(157)*256+PEEK(158)>
```

These commands give you the starting address, ending address, and execute address, respectively. Then CSAVEM "Filename", starting address, ending address, execute address.

This method only works with non-auto-execute machine-language programs and it does not work well with a disk system.

Model II News

As you are aware, there are many more Model I and Model III systems than there are Model IIs.

However, help is on the way for Model II users, as we have just formed a national Model II user's group. We plan to publish a user directory and a short newsletter. Anyone interested in finding out more about our group should send us a stamped, self-addressed envelope.

NOW MODEL I AND MODEL III!

Now Model III users can take advantage of the ALPHA I/O system too. Our new **MOD III/I BUS CONVERTER** allows most port based Model I accessories (such as our **ANALOG-80**, **INTERFACER 2** and **INTERFACER-80**) to connect to the Model III bus. **MOD III/I BUS CONVERTER**, complete with all connectors, only \$39.95.

PRINTSWITCH

Have 2 printers on line at all times and select printer 1 or 2 by means of a conveniently located switch. End the problem of constantly plugging and unplugging printer cables. **PRINTSWITCH** is a compact module that plugs onto the parallel printer port of your TRS-80 and provides an edge connector for each of your two printers. It works with any two types of printers: dot matrix, daisy wheel, plotters, TRS-80 converted electrics, etc. Assembled, tested, ready to use with connector and instructions. For Model I or III (please specify). **ONLY... \$59.00**

SUPERIOR QUALITY REPLACEMENT & EXTENSION CABLES

Highest quality cable and high force, gold plated contacts ensure the utmost in connection reliability.

- 1 KEYBOARD TO EXPANSION INTERFACE \$21.
- 2 DISK DRIVE CABLE FOR 1 OR 2 DRIVES \$32.
- 3 DISK DRIVE CABLE FOR 3 OR 4 DRIVES \$45.
- 4 DISK DRIVE CABLE EXTENDER \$22.
- 5 PRINTER CABLE EXTENDER \$24.
- 6 40 PIN BUS EXTENDER - 2 ft. \$22 4 ft. \$24.

Custom cable configurations are also available. Call us.

YOU ASKED FOR IT: "EXPANDABUS" X1, X2, X3 AND X4. CONNECT ALL YOUR TRS-80 DEVICES SIMULTANEOUSLY on the 40 pin TRS-80 bus. Any device that normally plugs into the keyboard edge connector will also plug into the "EXPANDABUS". The "X4" is shown with protective covers (included). The TRS-80 keyboard contains the bus drivers (74LS367) for up to 20 devices, more than you will ever need. Using the E/I, it plugs either between X8 and E/I or in the Screen Printer port. Professional quality, gold plated contacts. Computer grade 40 conductor ribbon cable X2... \$29 X3... \$44 X4... \$59 X5... \$74 Custom configurations are also available. call us

ANALOG-80: A WORLD OF NEW APPLICATIONS POSSIBLE.

8 DIGITAL MULTIMETERS PLUGGED INTO YOUR TRS-80!!! Measure Temperature, Voltage, Current, Light, Pressure, etc. Very easy to use. For example, let's read input channel #4 10 DUT D 4 "Selects input #4 and also starts the conversion 20 A-IN(PD) Puts the result in variable 'A' Voltage Specifications Input range 0-5V to 0-500V Each channel can be set to a different scale Resolution 20mV (on 5V range) Accuracy 8 bits 1% Port Address jumper selectable. Plugs into keyboard bus or E/I (screen printer port). Assembled and tested. 90 day warranty. Complete with power supply, connector, manual. **\$139.**

TIMEDATE 80: REAL-TIME CLOCK/CALENDAR MODULE

Keeps quartz accurate time for 3 years on 2 replaceable AAA batteries (not included). Gives MO/DATE/YR DAY of WEEK, HR MIN SEC and AM/PM. Features INTELLIGENT CALENDAR and even provides for Leap Year. This compact module simply plugs into rear of Keyboard or side of Expansion Interface (may be slipped inside E/I). Includes cassette software for setting clock and patching to any DOS (including NEWDOS 80 2.0). Optional "Y" connector allows for further expansion. For Model I Fully assembled and tested. Complete with instructions and cassette. **ONLY \$95.00 "Y" option add \$12.00**

GREEN SCREEN WARNING

IBM and all the "biggies" are using green screen monitors. Its advantages are now widely advertised. We feel that every TRS-80 user should enjoy the benefits it provides. But **WARNING:** all Green Screens are not created equal. Here is what we found:

- Several are just a flat piece of standard colored Lucite. The green tint was not made for this purpose and is judged by many to be too dark. Increasing the brightness control will result in a fuzzy display.

- Some are simply a piece of thin plastic film taped onto a cardboard frame. The color is satisfactory but the wobbly film gives it a poor appearance.

- One "optical filter" is in fact plain acrylic sheeting.
- False claim: A few pretend to "reduce glare". In fact, their flat and shiny surfaces (both film and Lucite type) ADD their own reflections to the screen.

- A few laughs: One ad claims to "reduce screen contrast". Sorry gentlemen but it's just the opposite. One of the Green Screen's major benefits is to increase the contrast between the text and the background.

- Drawbacks: Most are using adhesive strips to fasten their screen to the monitor. This method makes it awkward to remove for necessary periodical cleaning. All (except ours) are flat. Light pens will not work reliably because of the big gap between the screen and the tube.

Many companies have been manufacturing video filters for years. We are not the first (some think they are), but we have done our homework and we think we manufacture the best! Green Screen. Here is why:

- It fits right into the picture tube like a skin because it is the only **CURVED** screen. **MOLDED** exactly to the picture tube curvature. It is cut precisely to cover the exposed area of the picture tube. The fit is such that the static electricity is sufficient to keep it in place! We also include some invisible reusable tape for a more secure fastening.

- The filter material that we use is just right, not too dark nor too light. The result is a really eye pleasing display.

We are so sure that you will never take your Green Screen off that we offer an unconditional money-back guaranty. Try our Green Screen for 14 days. If for any reason you are not delighted with it, return it for a prompt refund.

A last word. We think that companies, like ours, who are selling mainly by mail should list their street address, have a phone number (for questions and orders), accept CODs, not every one likes to send checks to a PO box, the convenience of charging their purchase to major credit cards. How come we are the only green screen people doing it? Order your **ALPHA GREEN SCREEN** today. **\$12.50**

SPECIAL THIS MONTH!

DISK DRIVE EXTENDER CABLE, FREE YOUR MINI-DRIVES.

End the daisy-chain mess once and for all. Fits all mini-drives: Percom, Aerocomp, Shugart, Micropolis, MTI, Vista, Pertec, Siemens, BASF. Easy to install: just remove the drive cover, plug in the **EXTENDER CABLE** and replace the cover.

Now you can change and move your drives without disassembly. Keep the cover on and the dust out. High reliability gold plated contacts, computer grade 34 conductor cable. Tested and guaranteed.

Get one for each drive... **ONLY... \$8.95**

3 power relays under your control

INTERFACER-80: the most powerful Sense/Control module

- 8 industrial grade relays, single pole, double throw isolated contacts. 2 Amp @ 125 Volts. TTL latched outputs are also accessible to drive external solid state relays.

- 8 convenient LEDs constantly display the relay states. Simple "OUT" commands (in basic) control the 8 relays.

- 8 optically-isolated inputs for easy direct interfacing to external switches, photocells, keypads, sensors, etc. Simple "INP" commands read the status of the 8 inputs. Selectable port address. Clean, compact enclosed design. Assembled, tested, 90 days warranty. Price includes power supply, cable, connector, superb user's manual. **\$159**

Found and Fixed

I found and fixed some bugs in my "Outbreak" program (January 1983, p. 216). Most of the problems come from the sound routine, but a bug lives in line 200. To exterminate this problem enter it as: 200 IF X>126 THEN A = -A:X=126:GOTO 170.

If you own a tape system and are having problems with the sound routine, change Z1 = 127 to Z1 = 126 in line 700, or set the memory size to 32000. The sound is improved by changing all the USR(12)'s to USR(0)'s.

If you own a disk system and are having sound routine problems, you should change line 700 to: 700 DEFUSR0 = 32000: Z=32000. You should also change all JJ = USR(12)'s to JJ = USR(0)'s.

"The 2,000-Year-Old Algorithm" article (March 1983, p. 332). The line numbers mentioned in the first column on p. 333 refer to this program listing.—Eds.

The Judge's Decision

Figure 1 in my "Judge 80" article (January 1983, p. 221) is incorrect. The correct pinouts to IC4 are, from top to bottom:

IN	OUT
3	4
1	2
13	12
5	6
11	10
9	8

Also, the correct identification for IC2 in the IC list is:

IC1,2	74LS367
IC3	74LS08
IC4	74LS04

Stuart A. Cole
Rt. 5, #1 Five Oaks Lane
Gulfport, MS 39503

Directory Patches

Although the code in Carl Anderson's "Easier Directory" (December 1982, p. 32) assembled with no errors, the program produces nondescript garbage. The problem is not with the code, but with TRSDOS 1.3. Radio Shack released TRSDOS 1.3 with several errors and then published patches for some of them in the October 1981 issue of *TRS-80 Microcomputer News*. The problem is found in the I/O call to display the directory. The following two patches correct this anomalous I/O call.

PATCH * 10 (ADO = 4E2E, FIND = CD3E4B, CHG = CD8A50)
PATCH * 10 (ADD = 508A, FIND = 4469736B, CHG = 4FC33E4B)

James A. Calloway
645 Tarreyton
Ruston, LA 71270

Better Music

The "Dual-Voice Music Synthesizer" by Lee Morgenstern (1983 Anniversary Issue, p. 253) bombs on the Model I with an OV error at line 1160. To correct this, change line 1160 to read: 1160 READ Q:POKE X-1+P,Q:NEXT and

change line 1030 to: 1030 CLS: CLEAR
500:DEFINT A-Z.

After doing this, insert line 1055 which reads: 1055 M\$=STRING\$(152,0). Line 1055 is exactly the same as line 1110, but don't delete line 1110. This changes the starting address of M\$ to 32464 instead of 32616.

Paul F. Smith
305 S. Warmister Road
Hatboro, PA 19040

Fire One!

I found an error in David Edick's "Space Duel" program for the Model III (August 1982, p. 260). To let your spaceship fire, change line 123 to: IF A\$="C" THEN 1000.

Mari Ascolese
115 Ave Maria
San Antonio, TX 78216

Sorting Problem O.K.

There's an error in Bill Barden's "Assembly-Language Primer" program listing (1983 Anniversary Issue, p. 16) that prevents the last element from being sorted. The eighth data element in line 101 of Program Listing 3 should be changed from 254 to 255.—Eds.

Turtle Problems

Larry Brackney's "TRS-Turtle" program (February 1983, p. 116) has a bug under its shell. To get rid of it, change line 250 to: 250 L\$(W)=B:W=W+1:T\$=B.—Eds.

It's an Arrow!

There's a typo in the correction to Delmer Hinrichs' "Practical Regression Analysis" program in the February 1983 Debug column (p. 30). In line 2830, between the DZ and 3 there should be an up-arrow instead of a parenthesis. Otherwise it is correct.

Oh, well. You know what they say: "...and these bugs have smaller bugs upon their backs to byte them..."—Eds.

UNITED SOFTWARE ASSOCIATES

SPECIALIZING IN TELECOMMUNICATIONS

THIS MONTH FEATURES!

ULTRA TERM

A Full Featured Terminal Program

The Ultra Term communications package is one of the easiest to use and most versatile communications programs available for the TRS-80. It includes a full featured intelligent terminal program, with all the popular features of competing programs costing two to three times as much, and some new features that can't be found anywhere else at any price. Ultra Term also includes a self-relocating host program, and hex conversion utilities for bulletin board downloading. Some of Ultra Term's unique features are:

- Support for manual and auto dial modems.
- Exclusive Ultra Term direct to disk file transfer mode.
- An exclusive split screen feature.
- Line printer support with a 1K print buffer.
- Half and full duplex support.
- Universal format ASCII file.
- A full featured host program.

Retail Price: \$59.95

INFOEX - 80

Bulletin Board System

The INFORMATION EXchange bulletin board program contains all the software necessary to set up your own bulletin board service or message center.

The Infoex-80 software automatically answers phone calls, displays a logon message or bulletin, allows callers to enter and retrieve messages, and lets users chat (type) directly to the system operator.

Infoex-80 supports uploading and downloading in both universal ASCII format and Ultra Term disk file transfer format for accurate and fast file transfer.

Infoex-80 allows users to apply for individual passwords, so private password protected messages can be left for any user. The system also keeps track of the number of times each user has accessed the system, as well as the highest message each user has read, and advises each user when messages have been left for them.

The system automatically recycles on loss of carrier so it can recover if someone hangs up without signing off.

INFOEX-80 Version 2 Price \$134.95

LYNX MODEM

EMTROL Systems Lynx modem is an auto dial auto answer modem for use on TRS-80 Model 1 or Model 3 with or without an RS-232 interface. That's right, this modem includes an RS-232 interface internally, so you can use it on any TRS-80 computer, even if you don't have an expansion interface or RS-232 board installed.

The Lynx includes a one year factory warranty with one day turn around on service should it ever become necessary.

Lynx Modem price \$239.95

COMMBAT

Combat is a two player tank strategy game that can be played over a modem. In this game, the playing field is divided into a two by four matrix of sectors that are further divided into a 32 by 16 matrix. The player is given eight tanks, a base, three decoy bases, and various weapons including rockets, lasers, shells, mines and one ICBM. Your mission is to locate the enemy's base and destroy it with your ICBM, before he can discover the location of your base. Combat comes complete with a TRS-80, Apple, and Atari disk for one low price.

Combat price \$44.95

Changing the Basic language

onto the stack and then passes control to the RST address.

The instruction at 0010H is JP 4003H. The normal instruction at 4003H is JP 1D78H. As Basic begins to execute each new instruction, control jumps from 1D5AH to 0010H to 4003H to 1D78H—a circuitous route to jump ahead 30 bytes in memory. Several other routines in Basic also use RST 10H to call the subroutine at 1D78H, which gets the next character from the current command line or line of Basic, does some simple testing, sets the status flags according to the value found, and returns control to the calling routine. RST 10H is probably used dozens of times each second a Basic program runs.

An important point to remember is that 4003H is in RAM. You can put a new address for the JP instruction there and patch in your own routine. As long as your patch knows which ROM routine called it, it interrupts that routine and adds new features to Basic. Because the stack points back to the original caller, your routine merely has to examine the first two values on the stack to know whether it should interrupt.

With that in mind, and with the help of other ROM routines, I wrote Program Listing 1. The heart of the program, lines 580-950, uses only 48 bytes of memory and is completely relocatable. The first part of the program, lines 350-530, is a short routine that finds the top of unprotected memory, places the main program there, protects it, and correctly patches the interpreter exit at 4004H.

The main program works by testing the stack to see if RST 10H was called by the execution routine at 1D5BH. If that test fails, control is returned to normal interpreter flow in line 650; otherwise, you must make additional tests.

Lines 690-750 test to see if the next executable command is the token for the Restore verb. Again, if that test fails, control returns to normal program flow. When a Restore verb is found, lines 790-820 determine if it is followed by a numeric value. If not, the normal Restore routine is invoked. But when a numeric value does follow the verb, the final (and most important) part of the program is used.

Line 870 calls a ROM routine that translates the numeric value following the Restore verb into a line number and places the line number in the DE register pair. Then line 890 calls another ROM routine placing the address of the line in the HL register pair.

Finally, in line 910, the resulting address is placed in the read pointer at 40FFH—the objective all along. Then the stack and the HL buffer are tidied up and control passes back to the Basic interpreter as if nothing happened. The interpreter doesn't know it was interrupted by a new routine.

Using the New Restore

If you plan to use the new Restore with Disk Basic, you must first make one crucial test to be sure it works. Go to Disk Basic and run the following:

```
PRINT PEEK(&H4004); PEEK(&H4005)
```

If your computer does not respond with the values 120 and 129, your operating system is already patched into the RST 10H RAM exit. Use Debug to find the value stored in 4004H and 4005H (remember that the address is stored in least significant byte/most significant byte, LSB/MSB, order). Use that new value for the exit equate in line 290. The program documents other necessary changes.

Assemble Listing 1 as either a /CMD file or a system tape. Run the program and try the short test in Program Listing 2 (with a disk system, run Listing 1 before going to Disk Basic). If the

This column is a little different from my previous offerings. Instead of discussing how to include machine-language routines in Basic programs, I will explain the ultimate Basic interface: how to change Basic itself. I hadn't planned to delve into this topic for several months, but the one change explained here makes a lot of other programming much simpler.

I have always been aggravated by the lack of a proper Restore command in Radio Shack's Basic. Restore should set the read pointer to any data table in a program. In a large program with data statements for subroutines as well as the main line of the program, you must often Restore to the beginning of the program and then include dummy, time-wasting reads until the correct data table is found. Saving and reloading the read pointer with PEEKs and POKEs helps only if the program reads the same data table more than once.

After examining ROM, I developed a modification meeting all my requirements. Restore works as it always did until a line number is added—then it works the way I want it to. My modification supports tape or disk systems and operates under all disk operating systems. The patch works so well I have added it to my copy of NEWDOS80 2.0.

I will explain how to add this Restore patch to your operating system. In future columns, I will feel free to include the patch in my programs.

Patching Basic

How do you alter Basic? Depending on what you want to do, the process is fairly simple. Several exits from ROM to low memory let you interrupt and expand the normal process of Level II Basic. Disk Basic uses most of these exits, so the biggest difficulty in adding more Basic features is identifying the appropriate exit.

The execution phase of every Basic command starts at ROM location 1D5AH, where the first machine instruction is an RST 10H. An RST, or restart, is a 1-byte call to a frequently-used subroutine instead of a normal 3-byte call sequence. When a restart is performed, the Z80 processor pushes the next address (1D5BH in this case)

Order from your Software dealer or from:

PROSOFT[®]

Dep't. C, Box 560 No. Hollywood, CA 91603

TERMS: VISA, Mastercard, checks, money orders, COO. No P.O.'s accepted. Most orders shipped within 24 hours. Please add \$3.00 for surface UPS in U.S.A., or \$6.00 for UPS Blue Label. Add \$6.00 in Canada, \$15.00 overseas air shipment, 6 1/2% sales tax in California.

BUILT-IN SUPPORT FOR MOST POPULAR PRINTERS, INCLUDING:

Anadex, Brother, Centronics, C.Itoh, Diablo, Epson, Gemini, Microline, NEC, Prowriter, Gume, Radio Shack (LP 1-8, DW2, OMP-410, DWP 200-2100), Smith Corona, Teletype, Typewriter, anything compatible with any of these, and many others, parallel and RS-232.

SPECIAL AVAILABLE OPTION: Right-justified proportional for Diablo, F-10, Gume, Spinwriter, etc. Requires "Daisywheel Proportional" Option plus NEWSSCRIPT.

REVIEWERS AND USERS AGREE:

"NEWSSCRIPT" is the best word processor I have seen ... unsurpassed in printer control ... no other TRS-80 word processor can match its ability to format text ... its editor is fast, easy, and powerful." (80 MICRO, Oct. 1982)

"Your phone information system and the prompt and courteous staff that you provide to help your clients ... are worth the cost of the system." (V.H.H.)

"Better than cold beer on a hot day!! Thank you!!" (R.S.)

"What a program. So easy to learn and easier to use. I waited too long before ordering!" (P.J.M.)

"... takes the TRS-80 to a new level of text handling ... very user-friendly ... superb documentation, adaptability to many printers and operating systems ... a standard against which other TRS-80 word processing programs will be judged." (SOFTSIDE, Dec. 1982)

"... ongoing support second to none, with superb documentation." (80 U.S. Journal, Feb. 1982)

number anywhere the old RESTORE is used except as part of an If...Then statement. If...Then has its own syntax checks and reports RESTORE 400 as a syntax error. Also, if you use a renumbering utility, you'll probably find that it won't correct line numbers

"If the screen fills with asterisks, everything is working perfectly."

after RESTORE because it won't expect any. You will have to reset the line values yourself.

Making It Permanent

If you find the Restore patch useful, make it a permanent part of your operating system and a standard part of Disk Basic. I've successfully included it in both NEWDOS80 2.0 for the Model I and TRSDOS 1.3 for the Model III; you can add it to other Disk Basics using the same techniques.

Be sure that you work with a scratch copy of your operating system, never with the original or your primary backup. Also, keep careful records of your work. You might want to change the patch next week or next year, and without those records you'll have trouble.

Your first job is to find room in Disk Basic and in memory to patch in the new code. Most operating system writers include patch space in their major programs to allow for future updates and corrections.

I will start with NEWDOS80 2.0. Figure 1a shows the Superzap dump of BASIC/CMD's relative sectors 14D and 15D (as they are on my original copy of NEWDOS80). Sector 15 is composed almost entirely of zero bytes—a strong indication that it is zap space. In order to test whether this space is useful for patches and zaps, you need to know where in memory it loads.

Load Basic and perform as many Disk Basic functions as you can, includ-

screen fills with asterisks, everything is working perfectly. If you get an error message, or if any zeros appear on the screen, examine Listing 2 first, and then check Listing 1.

The syntax for the new Restore com-

mand is exactly what you expect. If you wish to read a block of data starting in line 400, enter RESTORE 400 or RESTORE400. RESTORE without a line number works as it always has, and you can use RESTORE followed by a line

"WHERE DID ALL THE MONEY GO?"

TALLYMASTER offers a new, powerful, easy-to-use way of summarizing and analyzing budgets and expenses. It's designed for personal and small business use by people who need quick answers to the question, "Where Did All The Money Go?"

Like most PROSOFT products, "TALLYMASTER" originally was developed just for our own use. To find out why our expenses kept rising, we looked for a quick and easy way to categorize our bills. The check register gave too much detail, and with "VISICALC", it was hard to just add new numbers at random.

TALLYMASTER takes a simple, common-sense approach to organizing and summarizing expenses and sales. Up to 702 categories can be defined. As numbers are added to them, new totals are shown instantly. It's like having a room full of calculators, all in easy reach. Totals can be sorted, reports printed, and disk files combined.

TALLYMASTER's handsome documentation has a step-by-step tutorial, with dozens of examples and illustrations. We've even included five sample disk files for you. Whether you're managing a home budget or business expenses, this program can give you better understanding and control. It helped us, and it can help you.

TALLYMASTER is available for the TRS-80 Models I and III (48K) and the IBM Personal Computer (128K). The TRS-80 version is just \$79.95. The IBM version, with function keys and an extra-fast sort, is just \$129.95.

Figure 1b

To find the load address of the code in the sector, scan through the entire sector looking for a 01 byte. This could be a data value, a file load marker signaling that a section of code is to be loaded, or a machine-language instruction to load register pair BC with the following 2 bytes.

If the 01 is a file load marker, it is followed by a 1-byte value indicating how many bytes are to be loaded (00=256). If you start counting from the first byte after the count indicator, the count ends on the last byte before the next file load marker (which could be on the next sector). In sector 14, the file loading marker is at relative byte 0CEH and is followed by a count of 256 (or 00).

The 2 bytes after the load marker and load count indicate the memory load address of the subsequent data. (These 2 bytes are in LSB/MSB order.) The 2 bytes at D0 and D1 indicate the load address of 65C9H. In the area of this address, make sure that Basic won't write over the zeros.

Now to install the patch. Two different patch sections are needed—one to place the code in memory and a second to place the code's address at 4004H. The 256 bytes that would have been loaded at 65C9H must be broken into two smaller pieces. You need 6 bytes of disk space to patch the RST 10H exit, so the first job is to change the load count at relative byte CFH to FAH.

The actual code is inserted on the disk starting at relative byte EAH. By using the load address of 65C9H and counting forward, you can easily calculate that this code starts at 65E1H when loaded into memory. The program code spans from the end of sector 14 to the beginning of sector 15.

Now, load the new RST 10H exit address by starting at relative byte CAH of sector 15. First, place the 01 load code on the disk followed by a 04-count byte. Then the RST 10H exit address in LSB/MSB format and the address that the main code section has in memory are zapped onto the disk. When you finish, the two sectors should look like those in Fig. 1b. Notice the change at byte CFH of sector 14; the other changes are easy to see.

Changing TRSDOS 1.3

To patch the Disk Basic in TRSDOS 1.3 (Model III), use the File Patch utility of Debug. However, Basic's password

MICROSOFT BASIC-80

CP/M: THE SOFTWARE STANDARD

- * CP/M presents an industry-standard software interface. Programs designed to run under CP/M can run on all CP/M computers.
- * CP/M is available for almost every computer on the market, including IBM, Xerox, Apple, Commodore, DEC, NEC, Tandy, and many, many more.
- * There are thousands of CP/M programs available — word processors, languages, data bases, and applications. No single manufacturer, not even Tandy, Apple, or IBM, could ever develop and support this much software.
- * With hundreds of software developers competing for a place in the CP/M market, CP/M programs will continue to get better and cost less.

CP/M: POWER AND VERSATILITY

- * The majority of business and professional computers offer CP/M. CP/M programs tend to be "state of the art" in every respect.
- * CP/M means reliability and dependability. Over the years, CP/M has evolved into a mature, sophisticated, and thoroughly debugged product. There are no hidden surprises with CP/M.
- * With CP/M and TRSDOS, your TRS-80 can run twice as much software as other computers. You get to choose the best from both worlds.
- * CP/M offers far more versatility than TRSDOS. CP/M computers are available that offer hard disks with tape backup, multi-user capability, multi-high speed processors, and many other features. There is a CP/M computer to meet all your future needs.

CP/M: SAVE TIME AND MONEY

- * Unlike TRSDOS, CP/M programs can be transferred to your next CP/M computer. All of the money you spend on CP/M software can be considered an investment in the future.
- * Your old TRS-80 will never be obsolete with CP/M. When you buy your next computer, your TRS-80 can serve as a completely compatible home or backup unit.
- * With CP/M, you can effectively master your new computer before you buy it. You will not need to relearn operating procedures, rewrite programs, re-enter old data, or learn new applications programs.
- * With all of these advantages, CP/M is simply the most powerful and cost-effective product you can add to your TRS-80. CP/M conversion easily pays for itself in time and money saved.

OMIKRON CAN SAVE YOU MONEY

- * **Save Now**—Omikron's hardware prices are the lowest in the industry. However, with Omikron, hardware savings are only the beginning. Omikron also sells a variety of CP/M software products for use with our CP/M adapter. Our special software prices can easily save you \$1000 or more on the finest, most popular CP/M programs available.
- * **Save Later**—To help our customers afford the CP/M software they require, Omikron has formed *Cougar*, our official users group. With *Cougar*, Omikron can arrange to purchase CP/M software products at high volume discounts. This allows us to offer our customers surprising discounts on top quality software products. Over a year's time, many of our *Cougar* members save hundreds of additional dollars on software purchases.

*Cougar products and prices are available only to Omikron hardware purchasers.

OMIKRON PRODUCT INFORMATION

- * Omikron products are designed for years of trouble-free operation. All Omikron printed circuit boards carry a "life-time warranty" to the original purchaser.
- * Omikron products are designed for simple, "plug-in" installation. No soldering or modification to your TRS-80 is required.
- * The Omikron CP/M system features a sophisticated set of utilities and drivers designed to optimize and enhance the use of CP/M on the TRS-80.
- * Over the years, Omikron, has sold thousands of CP/M adapters. Our products have been highly praised in reviews in Byte, Interface Age, SoftSide, 80-US, Desktop Computing, 80 Micro, and many others. Reviews are available on request.

OMIKRON'S PRODUCTS

- Mapper I/48 — 48K CP/M for the Model I
- Mapper I/64 — 64K CP/M for the Model I
- Mapper III/48 — 48K CP/M for the Model III
- Mapper III/64 — 64K CP/M for the Model III
- Mapper II — 8" drives for the Model I
- CP/M software including: WordStar, MailMerge, SuperSort, Microproof, Electric Webster, COMMX, and, CBASIC II.

New Products: (available 2nd quarter, 1983.)

Program Listing 2

PATCH *5 (ADD = 52ED, FIND = BE, CHG = 00)

TRSDOS Basic doesn't appear to have patch space, but room exists at the end of the file. In the directory, the end of the file is marked as the end of the 20th sector, but that sector actually ends at relative byte B9H. You can use the rest of the space without changing the directory. Also, about 300 bytes of empty space exist in memory between the end of Basic and the beginning of the Basic program (this increases when file space is reserved). Use this space for patching.

Figure 2a shows the last sector of Basic as it appears in Debug. To get to it, enter Debug from DOS Ready, then press F and answer the prompt with BASIC/CMD. Use the + key to move to sector 14H. At byte B6, you will see 0202 4D61. The first 02 is a file-loading code instructing the system to stop load-

ing bytes into memory and to now find a transfer address (address where a program begins). The second 02 indicates that 2 bytes are used for the address. The 4D61 tells the system to jump to 614DH and start processing from there.

Move the transfer address instructions toward the end of the disk to make room for the Restore patch. The modification is shown in Fig. 2b. Starting at relative byte B6, a 01 load code and 32 (hex) count byte are entered, followed by a load address of DD64 (64DDH). Then the 48 bytes of modification are entered. At relative byte E9, another 01 load code and a 04 count are entered, followed by the address of the RST 10H exit and the new address to be patched there. Finally, starting at relative byte EF, the transfer code of 02 02 4D 61, that was originally at byte B6, is put back in. After you hit enter, the modification will be part of your copy of TRSDOS.

Final Comments

Run Listing 2 after modifying your operating system to be sure that you installed the modification properly. Any erratic operation will indicate a misplaced byte somewhere on the disk.

As of this writing, I have used a modified NEWDOS80 2.0 disk for over six months without any problems, but I can't guarantee that you won't have any. I tested the TRSDOS 1.3 modification, but, since I don't normally work with a Model III, I can only say that it looks trouble-free. If you have problems with the modification routine being overwritten, let me know.

Finally, let me offer one warning about the Restore modification. If you return to DOS from Basic without a reboot, the modification will still be in place and functioning. If you then execute either a library function or a CMD program that overwrites the memory area where the patch resides, and if DOS or that program subsequently uses a RST 10H command, you will have problems. The computer is likely to lock up or reboot. To prevent this, reboot every time you leave Basic to run the culprit program.

Comments and suggestions about *The Next Step* are always welcome. If you would like a personal reply, please include a SASE with your letter. You can write to me in care of 80 Micro or through e-mail on CompuServe where my PPN is 72165,735. ■

Figure 2b

NEW!
ESF III
NOW AVAILABLE!

SIMPLY AMAZING!

NEW LOW PRICE—\$99.50

How else can you describe the *Exatron Stringy Floppy* system? You could say that it's an under \$100, compact, reliable, robust, high-speed, computer-controlled, easy-to-use, well-supported alternative to disk drives, for a Model I TRS-80—*simply amazing!*

Amazing Technology

Based on a special endless-loop tape cartridge, called a Wafer, the ESF system was designed specifically for computer data storage. The direct-drive transport mechanism has only one moving part, and data is transferred to and from the tape at a rate of 7200 baud.

Amazing System

Thousands of ESF buyers have been amazed by 16K programs loading in less than 20 seconds; automatic verification of saved programs; up to 70K bytes, and 99 files, on a single Wafer; a ROM operating system (RAM based in Model I) no need for an expansion interface; and 1-year parts and labor warranty.

Amazing Support

With an ESF system you don't just get a piece of hardware, you get total support with hundreds of user workshops; dozens of high-quality, reasonably priced programs (such as Electric Pencil 2.0, Electric Spreadsheet, File Management System and Technical Word Processor); access to hundreds of FREE public-domain programs; an @NEWS user column in 80-US; @LOAD program magazine; and a toll-free information line.

Amaze Yourself

To see for yourself how amazing the ESF system is, or for more detailed information, call us toll-free at **800-538-8559** (inside California **408-737-7111**) and take advantage of our 30-day money-back return policy. Copies of the 80-page manual are available for \$4.95 (which you can credit towards an ESF), and while you're on the line ask about our equally amazing 64K RAM/ROM board for the Model I.

Stringy Floppy is a trademark of Exatron Corp.

This edition of The Color Key is a mixed bag. I'm giving myself some slack time in which to evaluate your reactions to the column, and I have a couple of unrelated topics I'd like to discuss.

Color Keyboard

Slowly but surely, the world is depriving me of some favorite gripes. For the past month or so I've had the pleasure of using a real keyboard on my Color Computer.

The hardware in question is a classy 57-key unit marketed by the Micronix Corp. (#7 Gibraltar Square, St. Charles, MO 63301). It's a direct plug-in replacement for the standard calculator-style keyboard, assuming you have a Series E or earlier motherboard.

Series F keyboards attach in a different manner, so if you have a late-model CoCo you might want to contact Robert Brooks at Micronix to express your interest.

I've done a complete review of the keyboard for our sister publication, *HOT CoCo* (June 1983, p. 16). All I want to say here is that the keyboard works perfectly, allowing me to get maximum efficiency from my modest typing ability.

Micronix has relocated some keys to make room for four function keys (programming to be implemented later), but otherwise there is little for the user to relearn.

The Micronix keyboard sells for \$79.95, so it isn't an impulse purchase. Nevertheless, it beats the effort required to wire up and install a bare keyboard on your own. Check it out if you're into word processing in a big way.

Word Processing Progress

My enthusiasm for Howard Cohen's Telewriter (Cognitec, 704 Nob Ave., Del Mar, CA 92014) is well-known. I'm writing this column with the latest version, Telewriter 64, and it's a beauty. The product has had a prolonged gestation period, but what finally emerged was worth the wait.

Several new features have been added to my old friend, bringing it up to date with some of the other word processors that have appeared since my May 1982 review (*80 Micro*, p. 208). It is now possible to right-justify text, giving your

A collection of CoCo updates

correspondence a much more professional appearance. You can hyphenate and designate nonbreakable spaces, too.

Another welcome feature is the ability to change the position of page breaks. Have you ever prepared a thoroughly professional letter, only to have it print out with all the text on the first page and "Sincerely yours" at the top of the second?

A new command, clear-V (clear is the Telewriter control key), causes the cursor to advance through the text one page at a time so you can check page breaks. Blank lines can be added or deleted to reposition page breaks if need be, and you can mark the breaks with a nonprinting character.

The whole formatting process is aided by Telewriter's new-found ability to display three different text densities on the screen. In addition to the standard 24 51-character lines, you now have the option of going to either 64 or 85 characters.

Neither is of much use for the writing process unless you have a wideband video monitor, but the high-density formats can be handy for checking the appearance of finished material before committing it to print.

Telewriter now has user-adjustable tabs. The stops are first defined in an embedded command line that must be the first entry in the text file. The clear-enter combination advances the cursor to the next tab position from any point in the text. Previous versions of the program had predefined stops every eight

spaces, unsuitable for either paragraph indentation or the composition of tabular material.

I'd like to mention two more of the many new features: the ability to generate ASCII text files, and the program's increased text capacity.

ASCII files take longer to read and write, and occupy more tape or disk space, than Telewriter's usual compressed binary files. However, ASCII is a necessity if you want to run your material through a spelling checker.

I have been using Peter Stark's Spell 'N Fix (Star-Kits, P.O. Box 209, Mt. Kisco, NY 10549) for some time; ASCII conversions have been handled by a Basic program named Convert that came with the original disk version of Telewriter.

Unfortunately, the combination does not treat Telewriter's embedded command lines properly, so a text file that has been converted to ASCII, corrected, and converted back to binary for printing will generally have to be reformatted first.

Telewriter 64 has remedied that by including a new conversion routine whose output survives everything that Spell 'N Fix and I can throw at it. One peculiarity should be noted, though: When the ASCII version of a file is listed on the screen, Telewriter 64 prefixes embedded commands with a spurious lower-case k. Ignore it; when the file is read back into memory the command lines are in their proper form.

Finally, the size of the text buffer has increased. The disk version makes almost 25K of RAM available in a "64K" machine, in contrast to the 18K available under the old v2.0. The cassette version of the new program frees almost 40K.

Before you can realize this capacity, the computer must be capable of addressing all 64K of RAM. The modification is the same as the one you would perform to use FLEX, but Telewriter itself does not require the alternative operating system. And that brings me to my next topic.

The New Breed

I detect an interesting trend: People are writing software that takes advantage of the 64K CoCo modification without requiring FLEX or any other

operating system.

The programs typically contain loader routines that change the memory map to the all-RAM configuration, patch in any required portions of the Basic ROMs, and take off. The usual result is more user-available RAM.

Although my own experience with 64K word processors is limited to Telewriter 64, I should at least mention the existence of another: Text Pro II (Cer-Comp, 5566 Ricochet Ave., Las Vegas, NV 89110).

I assume that this program unfolds the CoCo memory map in the usual way, although one item on the specification sheet catches my eye: the size of the text buffer. This weighs a hefty 54K, which makes me curious as to what's left in the program.

I've been using a couple of other 64K packages recently. Spectrum Projects (93-15 86th Ave., Woodhaven, NY 11421) has produced a trio of handy utilities on a single disk: 40K, which copies the Extended Color Basic ROM to high memory, freeing an additional 8K for user programs; Spool64, which

employs the unused 32K as a print spooler; and Romcrack, which allows you to make disk copies of most Radio Shack ROM packs.

The extra RAM liberated by the 40K program is available to the Basic programmer, as well as to the machine-language expert. Free memory varies from 31015 bytes with four graphics pages to 35623 bytes with a single page reserved. In all other respects, the computer plays as usual.

Spool64 performs high-speed relocation of text to the unused 32K; it is subsequently dumped to the printer. This frees the RAM normally addressed by Basic so that other tasks can be undertaken while printing proceeds at its own relatively slow speed.

Spooling is normally accomplished with outboard hardware. Spool64 provides a viable, minimum-cost alternative. It does require a printer capable of accepting data at 1200 baud, which leaves out my Line Printer VII. Thus I haven't been able to use the program myself.

Romcrack, the third utility, allows

you to make disk copies of ROM programs up to 8K in length, without needing the start, finish, and transfer addresses. You can even copy programs written in position-dependent code. For example, I've used the utility to add a copy of Project Nebula to my games disk.

Once you have transferred the ROM packs, you have eliminated a potential source of damage to the computer's cartridge connection. This can be worthwhile. Disk Basic's card-edge connector is a weak point of the whole Color Computer system, and repeated switching between the disk controller and a ROM cartridge might reduce system reliability.

It might be argued that Romcrack can make pirated copies of cartridge programs. In fact, programs for locating and changing position-dependent code segments have already appeared in print.

I prefer to think of the program as a convenience for the individual whose system has grown through the acquisition of a disk drive, and who wants to have most of his software on one

INTERSTELLAR DRIVE™ A SOLID STATE DISK EMULATOR

Save valuable time!
5 to 50 times faster
performance than floppy disks
and Winchester drives

PION'S INTERSTELLAR DRIVE is designed for use with a family of interfaces and software packages. Currently available are interfaces for IBM, S100, TRS80, Apple, SS50, and most Z80 uP, and software for most popular operating systems. Additional interfaces are continually being developed for the most popular computers.

Basic Price for 256KB unit [Includes Interface and software]

**Increase your
computer's productivity**

The INTERSTELLAR DRIVE is a high performance data storage subsystem with independent power supply, battery backup, and error detection. It has 256KB to 1 Megabyte of solid state memory integrated to perform with your operating system.

Turn Your Color Computer into *SUPER* Computer

Color Computerists

HOT CoCo. The exciting new monthly magazine for the TRS-80 Color Computer*. It promises to transform your low-end machine into a high-resolution superstar.

HOT CoCo is the brainchild of Wayne Green, the publisher of *80 Micro*. The information in **HOT CoCo** is first rate with monthly columns and reviews that focus on valuable money-saving techniques. Time savers too! Plus problem solving articles on:

- Utilities—patching, aiding, troubleshooting
- Graphics—graphs and patterns
- Hardware—interfacing and enhancing
- Games—fun and strategy
- Programming techniques and tutorials
- Coverage of home use, business, communications and education applications

Best of all, **HOT CoCo** is written by users just like you. The material is always up-to-date and useful. Hardware, software, books... what's new... what's best... what works.

All this is yours for the affordably low subscription rate of \$24.97. With pre-payment (check or credit card), you'll receive

a 13th issue FREE! Use the attached order form, the coupon below, or call toll free 1-800-258-5473.

Turn your mild-mannered machine into a *SUPER* computer. Subscribe to **HOT CoCo** today.

YES! I want a subscription to **HOT CoCo** at \$24.97.

I understand that with payment enclosed or credit card order, I will receive a FREE issue making a total of 13 issues for \$24.97.

medium. Piracy is going to exist for a long time, Romcrack or no.

Spectrum Projects' utility disk is reasonably priced at \$21.95.

Another new program intended to capitalize on 64K of addressable RAM has made an appearance. It's a data-file manager called Disk Data Handler, or DDH, and it comes from Mel Hefter at Custom Software Engineering (807 Minutemen Causeway, Cocoa Beach, FL 32931). I've only taken a quick look through the documentation, but DDH looks fairly potent.

It is used to construct and manipulate data files of various types and offers a screen editor, fast sorting/selection capabilities, and flexible report formatting. DDH is also used to construct files that are further manipulated by Basic programs.

It takes time to wring out a data-management program, so the complete report on DDH will have to wait. The point I want to make now is that the Color Computer is being treated as an honest 64K machine by applications software authors.

That's as it should be. Color Basic is fine for your own programming, but commercial applications programs should not be limited to 23K of RAM when it's so easy to free up additional memory. Maybe some combination of FLEX, OS-9, and stand-alone programs like Telewriter and DDH will finally do the job for the Color Computer.

The Shack's blessing in the form of its own official 64K machine won't hurt, either.

Good Deals

You don't need to spend a bundle to get something worthwhile for the Color Computer. There are some good low-cost products, especially if you occasionally get out of computer stores.

For example, a recent trip to a local cooking-supply outlet produced a large clear acrylic stand, intended to hold cookbooks at a convenient angle. It now sits atop my computer, holding up magazines and notepads while I type into the machine. It handles a 500-page magazine with ease, it lets me see a complete double-page spread at one time, and it cost all of \$5.

I've previously gone on at some length about C.C. File, the \$7 program that Bill Dye produces (Trans Tek, 194 Lockwood Lane, Bloomington, IL 60108). It's an electronic notebook, or memo pad, or something; all I know is that it's an extremely convenient way to store unformatted information, and I use it to record anything that doesn't deserve the full data-base treatment.

Not that Dye is the only one turning out inexpensive software. Eigen Systems (Box 10234, Austin, TX 78766) has a couple of attractive items: The Stripper and Disk Timer.

The Stripper (\$7.95) is a utility that increases the efficiency of Basic programs by deleting remarks and unnecessary spaces, and by packing multiple statements onto a single program line. The idea is to save an archival copy of each of your programs, complete with explanatory remarks and the use of spaces to increase readability.

This code isn't used at run time, however. Instead, the Stripper is used to produce a tighter, faster-running version. You can always go back to the original if it becomes necessary to modify the program or to explain it to someone.

Disk Timer (\$6.95) is a software

tachometer. It takes ten one-second averages of disk speed and displays the individual readings and the high, low, and overall averages. A disk must be present in the specified drive.

The numbers can be helpful. Floppy drives are specified at 300 rpm, with a typical tolerance of ± 4 rpm; however, my Radio Shack Drive 1 starts acting flaky above 302 rpm, and it does drift upward over a period of several weeks. My guess is that the separation between recorded sectors becomes too small for reliable I/O well before the rated tolerance is exceeded.

Removing the drive's case reveals the likely culprit: a cheap speed-control potentiometer on the motor-control board. It's a little plastic job, quite possibly susceptible to drift. I have used Disk Timer as a real-time tachometer while adjusting the potentiometer; it makes things simple.

I've added a couple of lines to Disk Timer's Basic code to display the spread between high and low speed values, expressed as a percentage of the average. I find this a useful measure of drive stability. The modification is

```
65 XX=AT*(HI-LW)*100/AV
66 PRINT "SPREAD=";;
PRINT USING "#####",XX;;
PRINT "%"
```

The MPI drive I use as drive zero doesn't have the speed-control problem.

One More Wish

Color Computer disk-system owners learn quickly how important it is to keep the drive-controller contacts clean. I use a squirt of contact cleaner on a cotton swab to remove oxides from the controller's card-edge connector. That avoids the destructive, abrasive action of the usual pencil-eraser treatment.

The connector inside the computer's case uses gold-plated contacts and doesn't need much attention. A gold-plated connector that could be soldered to the disk-controller card would prevent oxidation at that critical press-fit connection inside the cartridge slot.

I know that someone makes a similar product for Model I connectors. Now that I have a good keyboard maybe I'll make this my new crusade. ■

MAILING LIST SYSTEM \$89.95

For TR5-R0 (Tandy Trade Mark) Model I and III

We proudly present here what many consider to be the most powerful and versatile mailing list system on the market today. It is primarily written in BASIC...with embedded machine code for the speed sensitive areas. This makes our system **easy to modify**, yet extremely fast...Our system is specifically configured to run on floppy disk drives. Some other major systems, run on floppies but are really intended for use on hard disk drives. To get the real benefit of such a system, one usually has to purchase expanded track/density disk drives and even then a problem occurs when all the drives are filled with data. We have neatly solved this problem by allowing your data disks to be maintained in continuous order even though, due to limitations of your drives, the list is too large to all be "on line" at one time. Thus our system accomodates extremely large lists using your existing drives and yet avoids the "segmented" data problems of the hard disk approach.

- Simple to use...even for the novice.
- Permits 2260 names on-line with 40 track dbl density drives and almost 5000 names with 80 track drives. 35 track single density drives permit 1025 on-line entries.
- Super fast sort by alp. or zip order (8 sec. for 1000 entries)...both orders can exist simultaneously on disk.
- High speed recovery of entries from disk...speed of sort is meaningless if retrieval from disk is slow...ours pulls in over 8 per sec!
- Optionally supports a second address line.
- Transfers old files over to our system.  **LOOK!**
- Zip order is "sub-alphabetized."
- Less than 5 digit zips have leading 0's appended.
- Supports 9 digit zips, **Canadian zips**, and foreign abbrev.
- Backup data disks are easily updated as entries are created, edited, or sorted...extremely useful!!
- Optional reversal of names about commas. This permits disk storage in last-name-first order to facilitate meaningful alph. order while the printout will be in "natural" order.
- Permits telephone, account, and/or serial numbers, etc.
- Prints on envelopes or on labels, 1, 2, 3 or 4 across.
- Test label/envelope printing lets you make horizontal and vertical adjustments with ease.
- Master printout of your list in several formats (not just a re-hash of the labels)...extremely useful.
- Selective printing by specific zips or by zip range.
- Editing is simple and fast...direct access or automatic search...Batch transfer of edited entries to backup disks.
- Optionally provides for duplicate labels to be printed.
- Deleted entries have "holes" on disk filled automatically and alph. order is still maintained!
- System adjusts to any DOS.
- Our automatic repeat feature allows often used names/addresses to be entered with a single key stroke.
- Load and "scroll"/edit through entries on disk.
- All labels optionally support an "ATTN:" line with provisions for multiple entries.
- Plenty of user defined fields with various options for simultaneously purging and selecting the printout...even allows for inequalities...powerful and easy to use.
- All 0's in address labels are replaced by easier to read O's.
- Continuous display of number of labels/envelopes printed.
- Each disk entry automatically "remembers" how many mailings have been made for that particular entry...Can be tied in with purge/select.
- Extensive assortment of extra cost options for customized master list printout (in addition to the standard one mentioned above), transfer of entries between disks, summary reports, and "publisher's" type multiple list label printouts.
- Continuing expert support just a phone call away. You will be able to discuss your problems/modifications with the authors.
- Hardware requirements: 32K, printer and 1 or 2 drives.

FORM LETTER (Use alone or with the mail list system) \$39.95

Create letters and store on disk with provisions for later retrieval and additions. Then print the letters using your mailing list.

- Same select and purge features as mailing list system.
- Select either continuous fanfold or "cut sheet" paper.
- Selectable tabing, test printing, and paging.
- Allows regular or legal size pages.
- Greetings are selectable by codes on mailing list. Options include Mr./Mrs., First/Last Name, global, or user defined.

SIGN (Supplied on tape, can be transferred to disk) \$19.95

Produce large (reduced 50% here) attention getting signs.

SUPER CALENDAR (Supplied on tape only) \$19.95

Prints out calendars of individual months of years ranging from 1583 to any time in the future. Standard banker's holidays are noted...Additionally prints out large "graphics" type wall calendars with memos under each day...Use as a planning calendar with optional disk storage...Requires 16K and a printer

Football Scouting Report (Disk Only) \$89.95

Allows coaches to scout opponents up to 5 times in advance and then **reliably** predict their actions.

Loan Amortization (Supplied on tape, can be transferred to disk) \$29.95

Achieves pin point accuracy with a built in calendar...This sophisticated program produces an exceptionally professional looking printout that includes yearly summaries as well as "totals-to-date"...Several options for calculating interest including one that pushes the payment date ahead to the next business day if the regular pay date falls on a weekend or holiday. Hardware requirements: Model I or III, 16K, and a printer.

FAST SORT and ALPHABETIZER (Disk only) \$29.95

Interfaces to your own basic programs...sort with the speed of machine code but with the convenience of basic. Use your disk to merge our short basic programs (with embedded machine code) with your own basic program. Follow simple instructions to set up a sort of string, integer, single, or double precision arrays (also ascending or descending order)...Sample sort time - 8 sec. for 1000 dbl. prec. numbers...Also included is a ready to use basic program. Use it to obtain a printout of alphabetized names.

Buy our Mailing List System and Form Letter Option together and get our Super Calendar and Sign programs absolutely free!

Drive errors and other bugs

Mr. Jim Girardi of Ocean City, NJ, wrote a Model II program using a CP/M system from the Software House (P.O. Box 16020, Fort Worth, TX 76133). He wanted to make his program available for customers with Model 16 computers. With the Mod 16 in the Model II mode, the CP/M disk refused to recognize the second disk drive (drive 1). Every time the program tried to access the drive, a "drive not ready" error occurred.

The CP/M manufacturers already had the problem fixed. Mr. Girardi just sent them \$25 and his licensed CP/M disk, and they returned a Model 16 version.

They plan to offer a Model 16 CP/M version that uses double-sided disks and the MC68000 microprocessor.

You'll also find this "drive not ready" error when you use Model II TRSDOS on the Model 16 in the Model II mode; in particular, you'll find it when you do a back-up or format on the second drive.

Model II drives rotate constantly, so they're always up to speed. If after about 20 seconds the disks are not accessed on the Model 16, they are programmed to stop rotating. This saves wear and tear on disks, but the drives

take 8/10 of a second to reach the proper speed. If the computer tries to access a disk too quickly, it is signalled that the drive is not ready.

To get around this problem, copy your programs onto the latest version of Model II TRSDOS (TRSDOS 2.0b), using FCOPY. Or, you could simply copy the THINLINE utility over to your old disk. Regardless of the method used, you ultimately have to run THINLINE from the TRSDOS Ready mode. This tells the computer to wait until the disk drives are up to speed before attempting

a read or write.

The TRSDOS 16 Drive command lets you set parameters to access different types of drives. This DOS command makes THINLINE and its opposite function, UNTHIN, unnecessary. Of course, if you set up the drives in the Model 16 mode and then reboot to the Model II mode, the parameters are not saved.

Engineering Literature

Motorola, maker of the MC68000 microprocessor, offers a large selection of application notes, data sheets, and other hardware-related publications. We picked up a free document on the technical aspects of the MC68000.

They also have hundreds of bulletins and pamphlets on topics such as A to D and D to A conversion, CMOS devices, memories, microprocessors, interfacing, instrumentation and control, phase locked loops, power supplies, and rf signal design.

For more information, contact Motorola's Literature Distribution Center, P.O. Box 20924, Phoenix, AZ 85036. Ask for their "Technical Literature in Inventory" directory and their "Application Note and Engineering Bulletin Catalog" number CTG3R14. ■

Assembly-Language Corner

A typographical error appeared in the February Assembly-language corner. Somehow we managed to leave a space out of a critical line.

The problem is an odd-address, trap-error message that does not show up during the assembly. The last few lines of the listing shown appear as follows.

```
MESSAGE      TEXT      '80 MICRO'
              DATAB     13
SVC BLOCK
              RDATA     32,0
              END        BEGIN
```

A space should be included inside the quoted text so that it reads:

```
MESSAGE TEXT      '80 MICRO '
```

All instructions for the MC68000

must fall on an even-numbered memory address, because it's a 16-bit microprocessor and instructions are one word (2 bytes) long.

The instruction SVC BLOCK RDATA 32,0 begins on an odd address because of the uneven number of bytes in the message section. The message text '80 MICRO' has an even number of characters, but the following byte, an ASCII 13 carriage return, places the next instruction on an odd address.

There are two other ways to fix the problem. An extra byte of memory could be reserved ahead of the SVC BLOCK by adding another DATAB 13 statement.

Mr. Jacob Heskes of Rockville Centre, NY, solved the problem by

simply switching the message section behind the SVC BLOCK.

More Bugs

One problem with new equipment is bugs in hardware, software, or documentation.

Page 142 of the Model 16 owner's manual contains a misprint. It shows data on the CLOSEF supervisor routine. Near the top of the page is the identifying supervisor call: 133. But later on that same page, a sample program uses 265 in the EQUW instruction. 133 is actually the identifying supervisor number.

The next problems all fall under the OPEN supervisor routine section beginning on p. 177 in the manual.

First, the manual describes some-

thing called a "user attribute byte." This is a number used to identify a file within your program. On p. 178 it states "you can use zero or any number from 32-255 for this value. TRSDOS will not examine this user attribute...." Both statements are incorrect.

When we tried the number zero as a user attribute, the file became password-protected. The computer must make up its own password and protect the file. Of course, the file is valueless since there is no way to know the password. And since this password protection is activated, the disk operating system must be examining that byte.

One final major error exists in the open routine. The following excerpt is from an example showing how to use the open supervisor routine. It appears on p. 179 of the owner's manual.

```
MOVW  @A1,#WRITE ACCESS
MOVW  1@A1,#RECORD LENGTH
MOVW  2@A1,#FIXED FILE
```

```
MOVW  3@A1,#OPEN ONLY IF EXISTS
MOVW  4@A1,#USER ATTRIB
```

Line 4@A1,#USER ATTRIB should read 4@A1,#USER ATTRIB with a capital "A" for the address register.

The real problem is in the MOVW (move a word) instructions. We were unable to get the sample program to work. Since only a single byte needs to be loaded under each of the five Move instructions, we changed the W's to B's (to indicate a byte operation) and the program ran fine.

```
MOVW  @A1,#WRITE ACCESS
MOVW  1@A1,#RECORD LENGTH
MOVW  2@A1,#FIXED FILE
MOVW  3@A1,#OPEN ONLY IF EXISTS
MOVW  4@A1,#USER ATTRIB
```

We invite you to send us any comments, ideas, or errors you encounter. We will try to duplicate errors and report them to other unsuspecting programmers. ■

PEL-TEK Announces EXTRAORDINARY VALUES for the TRS-80 MOD I/III

Pel-Tek's Word Machine Version 2.0

A full featured line oriented word processor in machine language... now better than ever with these features:

- Block graphics (for printers that support it)
- Embedded printer controls
- Help screen
- Lower case support for unmodified Mod I's
- Variable margins, line length, page length, line spacing
- Access to D.O.S. with warm start re-entry
- Scroll up/down text
- Save/load disk files
- Insert/delete characters/lines
- String search
- Printer independent
- Simplified commands
- Twenty four page typeset manual with command summary sheet (Manual FREE with S.A.S.E.)

Easy to learn, easier to use, now compatible with Aspen's RANDOM HOUSE proof reader.

for Mod I/III 32/48K Disk..... \$20.00

The Random House Proof Reader

From Aspen Software, the best price/performance spelling checker on the market today. Based on the Random House Dictionary:

- Shows spelling errors in context
- Allows immediate correction
- Add or delete words from dictionary
- 32,000 word dictionary

Suitable for use with Pel-Tek's word machine or other TRS-80 Mod I/III Word Processors.

for Mod I/III 32/48K Disk..... \$50.00

SAVE \$10.00!! Order Pel-Tek's Word Machine and the Random House Proof Reader together for one low price, only..... **\$60.00**

**Deadline
Infocom Inc.
55 Wheeler St.
Cambridge, MA 02138
Model III, 32K, one disk
\$49.95**

by Eric Grevstad
80 Micro staff

Poor Marshall Robner. His wife is cheating on him with a ski instructor. His son George is an irresponsible wastrel, running up huge gambling debts when he's not lying around listening to records; in fact, Robner was planning to write George out of his will. His business partner, Baxter, is selling the company to a greedy conglomerate, over Robner's dead body.

Literally. One or more of the above suspects, or perhaps Robner's secretary or gardener or housekeeper, murdered him, cleverly leaving his body in a locked room with a fatal overdose of antidepressant pills, prescribed after he'd threatened suicide, in his stomach. Marshall Robner's troubles may be over, but yours are just beginning.

This is the premise of *Deadline*, the wittiest, most thoughtful, and most rewarding adventure yet. Apple and IBM magazines and journals like *The New York Times* have raved about the game since its debut last fall; the TRS-80 version, finally in distribution,

is worth the wait.

Deadline's documentation alone is more fun than many adventures. Besides meeting your own character (a master detective, summoned by the family lawyer), you're given a full dossier on the case: coroner's and lab reports, photo of the library with overturned chair and chalk outline of Robner's body, plastic packet of pills found at the scene, and transcripts of interviews with the suspects. Your predecessors, intimidated by that pesky locked door, are ready to call it suicide and close the file.

You have 12 hours—8:00 a.m. to 8:00 p.m.—to roam the Robner mansion and crack the case. Arrest someone and a letter from headquarters purveys the result. In my attempts so far, the D.A. has refused to indict due to lack of evidence; better sleuths will obtain a trial and conviction. Move too slowly and the Chief Inspector escorts you to the door.

Deadline comes on a TRSDOS disk and lets you save games in progress on another disk. You can also make a transcript of your investigation if a printer's on line, an excellent feature. The top line of the display shows your current location and the time, which ticks away at about one minute per move. You can't examine a room and be done with it, either; the foyer that's empty at 8:30 will not be vacant at 10:52.

You're free to wander the house and grounds to search for evidence; you're

Our reviewers use a five-star rating system. One star represents the low end of this spectrum, while five stars represent the spectacular and high end of the spectrum.

aided by the indispensable Sergeant Duffy, who materializes from nowhere and whisks off to the lab when you want to analyze something ("His efficiency and quiet dedication impress you quite a bit"). Most of all, you're obliged to talk with the suspects. They range from charming to surly, and you'll find they lie through their teeth.

This interaction is carried out in the most natural, challenging prose in the adventure genre. Deadline uses complete sentences, as does the celebrated Zork series. In handling objects, "Examine the red herrings carefully" and "Put the pencil, the teacup, and the sugar bowl on the desk" are allowed. In quizzing suspects, "Mr. Baxter, tell me about the merger" and "Mrs. Robner, where is the new will?" are standard practice.

My one complaint about Deadline's vocabulary is, I suppose, that it isn't infinite. When I try something other than "Tell me about" or "Where is," the program interrupts with "Detectives are expected to know how to conduct a proper interrogation." No one will tell me whether Robner was right-handed, and I haven't been able to prompt

suspects who exclaim "Murder? But how do you know it was murder? I'm sure—" and then break off.

Even if your sentences are accepted, you'll soon be gnashing your teeth in gleeful frustration. The suspects are as cool a bunch as ever stonewalled Sherlock. They walked past me, brushed their hair, or lay down while I stood, ignored, in the bathroom or bedroom. They were never shocked into confession when I showed them bits of evidence ("Have you nothing better to do than pick up every object in the house and show it to me?").

The game taunts you as Jack the Ripper did Scotland Yard. One window, you're told, is too dirty to see through; when you retort "Wipe window," Deadline comments "Think you're clever, don't you?" and says it can't be cleaned that easily. Try something impossible ("Take bed" or "Get Mr. Baxter") and other adventures say "You can't do that." Deadline replies "Surely you jest."

In fact, part of the fun of Deadline is trying stupid moves for the sake of seeing the answers. Look under a bed, examine a toilet, try to kiss or molest a suspect or steal the silverware, or climb onto a dresser and jump off ("Wheeee!"), and you'll find Interlogic's Marc Blank ("Principal Architect," if you read the house's cornerstone) has anticipated you.

All adventures are to some extent interactive, letting you do certain things depending on whether you have certain objects. Deadline tops them all. Not only does the game know what you're totting, even if you forget ("You must be crazy, carrying that ladder inside the house!"), but the same suspect will answer the same question differently, depending on what you've discovered before asking.

In addition to different endings (carrying the Inspector Clouseau persona to the limit, I accidentally killed myself several times), the documentation hints that Deadline supports different solutions—if you find the right evidence, you can make a case against and convict several people. This should keep even competent detectives busy until summer; Witness, Infocom's second mystery, is due then.

In the meantime, I'd be happy to convict anybody, or even to get on the murderer's nerves and be killed. That would mean I'm getting warm. ■

MicroTerm
Micro Systems Software Inc.
4301-18 Oak Circle
Boca Raton, FL 33431
\$79.95

by **G. Michael Vose**

MicroTerm, or MTerm, is a terminal program for the Models I/III (and the IBM PC) from the folks who gave the world DOSPLUS. With MTerm and a modem, you can tune your computer into the network nation; information services like CompuServe and BSR After Dark, or one of hundreds of bulletin boards, are within your reach.

MTerm supports a range of baud rates, from 110 baud to 19.2 kilobaud. It supports automatic telephone dialing and macro-keys, which store often-used phrases or keystroke sequences.

MTerm also provides user-definable translation tables that filter printer output to translate ASCII control codes for your printer.

MTerm stores the data it captures on disk or it loads a file from disk and transmits that file to an information service or other computer.

The Features

Among MTerm's primary features is its adjustable RS-232 parameters. These parameters include baud rate, number of bits-per-data word, number of stop bits, and parity. Adjusting these parameters is simple; select "Set RS-232 parameters" and type in any new settings, or press enter to leave a current setting unchanged. The default MTerm setting for RS-232 communications is 300 baud, 7-bit words, 1 stop bit and even parity.

MTerm has two principal modes, the terminal mode, signified by a blinking dash (hyphen), and the command mode, identified by a full screen menu.

The MTerm command menu lets you change a number of settings for special communications, including your own screen's echo (duplex), elimination of carriage returns or line feeds, or putting your printer on-line to print all incoming and outgoing communications. You can change these settings with a single key.

These features are similar to many terminal programs. Where MTerm rises

above the crowd is in its ability to assign frequently used phrases and keystrokes to single keys (called *macro-keys*), and its ability to store up to 10 telephone numbers for modems with an auto-dial function.

MTerm's macro-keys are useful for storing sign-on or log-on messages. For example, when you access CompuServe, your identification number and password are requested. With MTerm, you can assign this information to macro-keys to streamline your log-on—with the added plus that you don't have to remember your user number or password.

MTerm stores from one to 64 characters for each macro-key and 10 macro-keys are available.

Similarly, you can store telephone numbers that are called with single keystrokes, greatly simplifying the dialing process for your auto-dial modem.

Printer Support

One question you should always ask before purchasing a software product is, "Will it work with my printer?" With MTerm, the answer is yes. Even more important, however, is MTerm's ability to take advantage of your printer's special features.

MTerm takes care of special-feature support by providing user-definable translation tables through which all files are sent to the printer. These translation tables replace the control codes of one printer or software package with the codes required by your printer. For example, if your printer uses an ASCII 0EH to engage its double-wide print mode, you can build a translation table that converts the code used by a word-processing package or another printer to 0EH so that your printer prints in the desired mode.

Setting up MTerm's translation tables for your printer is straightforward. You'll need your printer manual to find the codes it uses and you'll need to know the printer control codes used by the program to be translated. With this information, building tables is a snap.

Utilities

MTerm comes with two utilities to transfer non-ASCII files (XFER/CMD) and to convert a file into ASCII for use with MTerm (FILECONV/CMD). These utilities enhance the power of

MTerm without complicating the main program.

The Acid Test

Using MTerm is a real pleasure. The program is fast and its screen displays are easy to understand. Its adjustable Electronic Industries Association (EIA) RS-232 communications port settings make it versatile and powerful.

Running MTerm on my TRS-80 Model III proved that the Radio Shack and IBM versions are virtually identical. I did experience some serious bit-dropping at 9,600 baud while using my Model III as a terminal hooked to a single-board computer running an Intel

*"Using MTERM
is a real pleasure."*

8088 microprocessor. Dropping the baud rate to 4,800 alleviated the problem. I suspect MTerm had trouble sending the XOFF character to the attached computer in time to halt transmission while MTerm cleared the TRS-80 capture buffer. Another terminal program I tested under this configuration (Super-

term) dropped more bits than MTerm.

With typical Micro Systems Software elan, MTerm's documentation is broken down into short, easy-to-understand chapters and sections that are written in a breezy, conversational style. The technical information is segregated from the user information so you can learn how to use MTerm without getting bogged down in the details of how it works.

The glossary at the end of the MTerm manual defines about 80 computer terms including *glitch*, labelled, "an unwanted and annoying defect... in a program or... data file." Fortunately, glitch doesn't apply to MTerm. ■

Bable Terror is an arcade-style game in the Pac-Man tradition. A high-quality maze generator and the luck required to score well are its distinguishing features.

The Basics

Bable Terror takes place in a castle inhabited by hostile servants who have built a labyrinth to thwart their master's return from the Crusades. Dangerous creatures and bables randomly roam the maze's passages.

As the hero of Bable Terror you play a knight: an anxiety-ridden bumpy being with eyes that look fearfully ahead as you move through the maze via the arrow keys or a joystick. While you see the entire maze at the game's outset, throughout the game you see only a small portion of the maze; this twist adds to your anxiety.

Your life's mission is to slay bables and gather the ten twinkling treasure crosses scattered throughout the maze. Each cross you gather is worth 30 permanent points and up to a maximum of 300 temporary bonus points. The higher your permanent score, the fewer bo-

nus points you acquire with each cross.

The bonus points are credited to an on-screen timer that counts down to zero. They give you the power to slay

ables, horrible munching creatures that become harmless and toothless as long as you have time on the board.

Each bable you slay adds 100 points to your permanent score. If you gather all ten crosses without meeting sudden death, you receive a new maze and any remaining bonus points as part of your permanent score. You also receive a new knight at every 1,000-point mark.

In addition to bables, your antagonists include two types of evil creatures: a ghost and a horned, disembodied head that looks like a demon or a dragon. These are invincible and always deadly.

Tricks of the Trade

Each game allows you three drinks of a potion that makes you invisible. In a tight spot, you quaff the potion and disappear by hitting the space bar.

Thereafter, hitting the space bar gives you a brief look at the entire maze, highlighting the locations of any remaining treasure crosses.

The most frightening parts of any maze are the long straightaways. Since your view of the maze is truncated, enemies can suddenly appear in your path and catch you unprepared.

The Best and the Worst

Bable Terror's best feature is its maze generator. After dozens of games, I've yet to see two identical mazes. All of them are complex and challenging.

This seemingly endless variety of mazes gives the game its fascination. Unfortunately, you are not allowed to finish the maze if you're slain by one of the evil creatures. This might be frustrating to anyone who enjoys a puzzle for its own sake.

Sometimes Bable Terror is annoyingly repetitive. You might be trapped by a series of creatures that you must dodge one at a time in exactly the same manner. You can get quite bad-tempered repeating the same sequence of movements over three square inches while the rest of the maze goes unexplored.

Continues on p. 45

"THE RESULTS ARE IMPRESSIVE..."

— Dennis Kitz, 80 Microcomputing, 12/82

Langley-St. Clair's* **Soft-View™** Replacement CRT's eliminates the strobe, flicker and fatigue from TRS-80's™

Now you can upgrade your monitor with the new medium persistence green or amber phosphor tube.

State-of-the-art systems such as IBM™ and Apple III™ do not use the less costly "P4" E&W display tube because it is actually intended for TV viewing and its rapid strobes (60 times per second) cause irritating eye fatigue.

No amount of "green plastic" will solve this problem. But the new **Soft-View** CRT display tube from Langley-St. Clair will.

- Available in slow decay Green or medium decay "European Amber" (the standard in Europe)
- Made with Lead/Stannium impregnated glass that stops X-ray emission.
- Of high-contrast face glass that also stops most C.V. radiation.
- Available in frosted glass with extra Anti-Glare benefits.
- Easily installed... comes with pre-mounted hardware.
- Warranted for one full year against manufacturing defects or tube failure.
- The finest quality double-dark glass phosphor fields to produce dramatic contrast.
- Best for Word Processing and Programming, yet fast enough for Games and Graphics.

Don't let price get in the way of owning a quality printer.

Adding a printer to your computer makes sense. But deciding which printer to add can be tricky. Do you settle for a printer with limited functions and an inexpensive price tag or buy a more versatile printer that costs more than your computer? Neither choice makes sense.

Here's a refreshing option—the new, compact STX-80 printer from Star Micronics. It's the under \$200 printer that's whisper-quiet, prints 80 cps and is ready to run with most popular personal computers.

The STX-80 has deluxe features you would

expect in higher priced models. It prints a full 80 columns of crisp, attractive characters with true descenders, foreign language characters and special symbols. It offers both finely detailed dot-addressable graphics and block graphics.

And, of course, the STX-80 comes with Star Micronics' 180 day warranty (90 days on the print element).

The STX-80 thermal printer from Star Micronics. It combines high performance with a very low price. So now, there is nothing in the way of owning a quality printer.

The new STX-80 printer for only \$199.*

The game's most questionable aspect is its high incidence of luck. Because the creatures move randomly, you become at the mercy of chance once you become familiar with the game. It soon becomes difficult to discern any improvement in your ability to fend off evil creatures.

Features

The disk version of Bable Terror contains a permanent top-ten scoreboard, a nice feature in any video game. You can also freeze the action.

Bable Terror comes with sound that includes the usual loading and welcome noises and a special sound during maze

“This is a video game for existentialists. Death is dealt randomly, regardless of your ability or just deserts. If you take satisfaction in pitting yourself against the inequities of luck, you’ll enjoy the game.”

generation. These are little more than background distractions.

Other noises are more useful: You are signaled when you run out of bonus points and when you accumulate 1,000 permanent points. Once you recognize these two sounds, you can concentrate on the maze and ignore the point displays.

Finale

This is a video game for existentialists. Death is dealt randomly, regardless of your ability or just deserts. If you take satisfaction in pitting yourself against the inequities of luck, you'll enjoy the game. If you're frustrated by the daily repetitions of life, you'll enjoy it only until it becomes all too familiar.

Bable Terror is an addictive, well-designed game. Just make sure you're the right personality type for battling bables. ■

Color Pilot

**Tandy/Radio Shack
Fort Worth, TX 76102
Color Computer
\$59.95 cassette
\$79.95 disk**

by Carlos Calle

Color Pilot is a language designed to help you write teaching programs. Pilot stands for Programmed Inquiry, Learning, or Teaching. The original Pilot was developed in the early 1970s at the University of California at San Francisco. The latest standard Pilot, called Common Pilot, was developed by George Gerhold and Larry Kheriatry at Western Washington University.

Color Pilot is based on this standard but includes special extensions and features to take advantage of the Color Computer's graphics. Nevertheless, most programs written in Common Pilot run on Color Pilot.

Color Pilot has 16 statements and eight graphics commands with five statement modifiers. Table 1 lists the Color Pilot statements. Each of the five statement modifiers can be used with any statement to change its operation. Digit conditioners determine whether an instruction is executed.

Color Pilot allows high-resolution graphics (256 by 191 pixels) in four colors. The normal characters (24 lines by 32 characters) are not regular Color Computer characters, but a new set drawn on the graphics screen. The 96

Symbol	Name	Description	Comments
R	Remark	R:any remark text	Ignored by Pilot
T	Type	T:text	Types to screen
:	Continue Text	:continue text	Continuation line of a Type statement
M	Match	M:pattern	Matches answer
A	Accept	A:answer text	Inputs answer
J	Jump	J:label J:@	Program jump to label or to last Accept executed
U	Use	U:label	Subroutine call
E	End	E:	Return from subroutine
W	Wait	W:number	Number of tenths of second to pause
X	Execute	X:VARIABLE\$	VARIABLE\$ is executed
N	Newchar	N:number, HEX	Defines new characters
C	Compute	C:expression	Provides for calculations
D	DIM	D:VARIABLE\$	Reserves string space
SS	Sound Start	SS:	Turns on and off cassette
SH	Sound Halt	SH:	tape and plays through TV speaker
V	Video	V:variable	Controls video tape or video disk
G	Graphics	G:list	Graphics commands

Table 1. Color Pilot Statements

ASCII characters with full upper- and lowercase allow text and graphics on the screen simultaneously. A double-size text of 16 characters by 12 lines is also available. Shift/zero turns on and off the shift lock. Pilot supports true lowercase characters with descenders. Once you're in lowercase mode, the shift key produces uppercase characters.

Color Pilot Modes

After loading Pilot and executing the machine-language program you are in Command mode, signified by the prompt Pilot:. Eight commands are available in this mode:

- L: Load a Pilot program from cassette or disk.
 - S: Save a program on cassette or disk.
 - R: Run a program in memory.
 - E: Enter Edit mode.
 - P: Print program in memory.
 - I: Enter Immediate mode.
 - Shift/clear: Clear program area.
 - Break: Enter Command mode from Run, Enter, or Immediate modes.
- Three other modes are available:

● Immediate mode executes any Pilot statement immediately. This mode is useful when writing programs since you can enter it from the Edit mode by pressing the break key. Then type your statement and see exactly what it does.

"Color Pilot allows high-resolution graphics (256 by 191 pixels) in four colors."

This option is essential for any kind of graphics.

- Run mode executes a Pilot program. Pressing break stops the execution and returns you to Command mode.
- Edit mode allows you to write Pilot programs. You can exit to Immediate

mode to try out any feature and return to Edit mode without disturbing your program.

The Editor

Color Pilot provides a fairly good screen editor. Immediately after you enter the Edit mode by pressing E from Command mode, the screen blanks and the cursor appears at the lower left corner. If no Pilot program exists in memory, the cursor is all you see and the computer is ready to accept program statements. If there is a program in memory, only the first line appears at the bottom of the screen, with the cursor immediately below the first character. You can change the line or scroll through the text line by line or all at once.

By pressing shift in combination with any one of the four arrow keys you can scroll up, down, left, or right. However, the up and down arrow commands are backwards—Shift/up-arrow takes the cursor down through the text. You should interpret this command as bringing text up instead. Even the man-

COMPUTER KITS – FROM \$69.95

LNW SEMI-KITS can save you hundreds of dollars. By obtaining your own parts at the lowest possible cost and assembling the **LNW SEMI-KITS**, you can have the most highly acclaimed microcomputer in the industry – the **LNW80**. The **LNW SEMI-KITS** are affordable modules. You can start with a modest cassette system and expand to a full 4Mhz TRS-80 compatible system with 5 or 8 inch double density disks and color at any time.

A. LNW80 CPU – Made of high quality FR4 glass epoxy double sided circuit material, with plated-through holes and gold edge connector. It is fully solder-masked and silk screened. Here are just some of the outstanding features you will have when your **LNW80 CPU** board is fully assembled:

- 16K RAM ● Color and black and white video ● 480 x 192 high resolution graphics ● 64 and 80 column video ● 4 Mhz Z80A CPU ● Upper and lower case display ● 500 and 1000 baud cassette I/O – \$89.95

B. SYSTEM EXPANSION – Expand the **LNW80** computer board, **TRS-80** and **PMC-80** computer with the following features:

- 32K memory ● Serial RS232C and 20Ma port ● Real time clock ● Parallel printer port ● 5 inch single density disk controller ● Expansion bus (screen printer port) ● Onboard power supply ● Solder-masked and silk screened legend – \$89.95 (tin plated contacts) – \$84.95 (gold plated contacts)

C. KEYBOARD – 74 key expanded professional keyboard – includes 12 key numeric keypad. Fully assembled and tested. – \$99.95

D. COMPUTER CASE – This stylish instrument-quality solid steel case and hardware kit gives your **LNW80** that professional factory-built appearance. – \$84.95 Add \$12.00 for shipping.

E. SYSTEM EXPANSION CASE – This stylish instrument-quality solid steel case and hardware kit gives your **SYSTEM EXPANSION** interface that professional factory-built appearance. – \$59.95 Add \$10.00 for shipping.

F. LNW80 CPU – HARD TO FIND PARTS KIT – \$82.00

G. LNW80 VIDEO – HARD TO FIND PARTS KIT – \$31.00

H. SYSTEM EXPANSION – HARD TO FIND PARTS KIT – \$27.50

I. LEVEL II ROM set. (6 chip set) – \$120.00

VISA and MasterCard accepted. Add \$3.00 for shipping plus \$1.00 for each additional item. All shipments via UPS surface. Add \$2.00 for U.S. Mail. Shipments outside continental U.S.: funds must be U.S. dollars. Sufficient shipping costs must be included with payment.

ual instructions are backwards on this point (p. 32).

The editor is vastly superior to the Extended Color Basic editor. It is not a true screen editor, however, because it handles instructions that fit only on a single line.

Drawbacks

Color Pilot is far from perfect. Take, for example, the Sound command. The statement SS, sound start, turns on the cassette tape and plays the recorded sound through the TV set, explains the manual. SH (sound halt) does the opposite. And that's all the sound provided. The Color Computer's impressive sound capabilities are unused.

Using eight graphics commands, you can draw triangles, squares, rectangles, little houses, small cars, even little people if you're artistically inclined. You can fill enclosed areas with colors and draw lines with different colors, too.

But Color Pilot doesn't even know joysticks exist! Say you want to draw a nice triangle somewhere in the middle of the screen. You must type the following command:

G:E,D120,150,L80,100,L160,100,L120,150

This determines the starting point (Dx,y=D120,150) and the lengths of the three sides (Lx,y, where (x,y) are the coordinates of the end point of each line). The third side must go back to the initial point. Three joystick motions and four hits of the joystick fire button would accomplish the same thing faster and without calculations.

Another annoyance: In Immediate mode, the cursor is left at the end of the line after a command is executed. Since this isn't true in Edit mode, where you are most of the time, it is difficult to remember to bring down the cursor before entering another command. The first character entered is always chopped off.

The manual is well-written and assumes you know nothing. However, it doesn't have an index.

Although there are no Motor On-Off, Audio On-Off commands in Color Pilot, the sound commands SS and SH set the cassette motor and the audio output on and off. You can use them in the Immediate mode to avoid pulling the plugs on the cassette deck to position the tape before loading or saving a program.

"Using eight graphics commands, you can draw triangles, squares, rectangles, little houses, small cars, even little people if you're artistically inclined."

Conclusions

Color Pilot is suitable for teaching when you have complete control of the computers. It would be difficult to set

up in a computer laboratory for students to use unattended because the program has to be loaded into memory for the lessons to run. ■

What do people who've used the NEW amber or green replacement CRT's say about them?

"I was rather surprised when I received the picture tube - I placed the order on Friday and I received the tube on Monday! Thanks very much for such wonderful service.

"After reading the instructions which I found very clear, I decided to change the tube myself. It took me 40 minutes to have this beautiful tube working with no problems whatsoever..

"I am simply delighted - it does everything you mention in the ad.

"Thanks again for a wonderful product."

Harold E. Lange
Miami, Florida

From unsolicited letters of testimonial
reprinted with permission

"Remember the night you worked into the wee hours coding and debugging that super adventure on your TRS-80? Or the time you had to turn out that 30-page, end-of-the-year report with your word processor? Remember how tired your eyes became?

"The Langley-St.Clair Soft-View CRT combats this problem...

"It was only after using the computer for an extended time that I fully appreciated the pleasure of fatigue-free viewing. I became accustomed to the subdued amber screen very quickly, tending to be unconscious of the color and of the absence of flicker and glare until forced to use a standard machine. Having used the amber CRT, I found the black-and-white screen harsh and discomforting..."

If you have any doubt that computers have entered the mainstream, listen to this: that durable commercial couple, Steve Allen and Jayne Meadows, offering a 40-minute guide to RAM, ROM, and Basic on Donna Summer's old label, Casablanca. Forget *Time's* Machine of the Year cover story. If the micro rates an Allen/Meadows album, it's safe to say it's come out of the closet.

While the album jacket says "Steve and Jayne answer those important questions about the home computer," the answers really belong to Arnold Friedman, a teacher in the Great Neck and Bayside, NY schools and author of the album text.

The text, slightly changed in the recording script, is supplied in a handy booklet, which also contains a glossary ("All the words and terms you'll need to understand and speak the 'computer language' ") and one of those useless keyboard diagrams to practice on.

The glossary is quite good, though vague on topics like the difference between compilers and interpreters. The keyboard diagram, "set up just like a real home computer keyboard," features up and left but no down or right arrows, as well as the familiar plus, minus, semicolon, asterisk, and equals-over-colon keys.

Side one of the album sets the tone early. After a recording of a rocket-launch countdown and some jazzy elevator music, Allen declares "Welcome to the computer age. Welcome to the 21st century!" Meadows establishes the level of repartee with "What? It's already here? I must have overslept."

The narration continues in this vein through an overview of computer theory (the four sections: input, memory, central processing, and output) and

applications. For the most part, Meadows plays the ingenue, confessing "I thought computers were huge, complex, expensive machines run by Ph.D.s in white coats" and wondering whether software has something to do with ladies' lingerie.

Allen explains the difference between instructions and equipment with the old saw "If you can kick it, it's hardware." The phrase "booting a disk" never comes up.

After Allen's patient definitions of words like "byte" and "RAM" ("Have you ever been bitten by a ram, Steve?" "No, Jayne, just by the computer bug"), the two proceed to list standard reasons for micro ownership—financial management, inventories of books or recipes, education, word processing, data-bank access, games, and so on.

Meadows reassures listeners that

*"Allen explains the
difference between
instructions and equipment
with the old saw 'If you
can kick it, it's
hardware.' "*

"You don't have to buy all your software," mentioning user's groups and clubs that offer it "at practically giveaway prices, sometimes just for the cost of a blank tape." This would seem to be a hearty endorsement of software piracy.

Side one ends with a brief comparison of the types of micros available. The phrase "color computer" is used generically, though the album photos show Allen visiting a CoCo-owning family.

Such a machine seems to be the pair's choice—they dismiss \$100, membrane-keyboard models as useful only for people who spill things on them, and Meadows says that a \$200 unit looks "like a pretty good deal, when you realize that prices for computers alone can go up to several thousand dollars."

Side two, accompanied by background noises of clicking recorder buttons and computer keys, combines more explanation—"Stripped of all the gobbledygook, when you get right

down to it, a computer is simply nothing more than an enormous number of switches that are contained in the chips"—with some elementary programming exercises.

An imaginary datebook program introduces the mechanics of loading and running; from there, Allen and Meadows dip a toe in the ocean of Basic, cautioning listeners not to mistake Basic for English ("Beginners in programming frequently confuse the two languages, which thoroughly confuses the computer").

The sample programs are traced step by step, with care to explain the difference between IO PRINT "2+3=" and 20 PRINT 2+3, but it's beyond the scope of the album to give any kind of meaningful introduction. By the end, Allen and Meadows have added Input to Print statements and written a Fahren-

"I could wish for Stiller and Meara, but Allen and Meadows' amiable expertise makes the album a painless introduction."

heit-to-Celsius program, but side two leaves a decidedly skimpy impression.

Compared to computer guides in bookstores, *Everything You Always Wanted* is a novelty item. It's less intimidating, but less thorough; it seems aimed at an adult or middle-aged audience rather than the mass market. Too, it's hard to skip back and reread sections of an LP. It might be easier to buy the cassette and sit by the rewind button.

But these shortcomings aren't Allen and Meadows' fault. Their jokes are creaky—"A home financial program can keep track of food, utilities, and charge accounts." "I'd like to know more about your charge accounts, Jayne"—and their asides and chuckles are no doubt part of the script, but the two veteran professionals run through the material without a hitch.

I could wish for Stiller and Meara, but Allen and Meadows' amiable expertise makes the album a painless introduction. ■

TRSDOS 2.3 Decoded & Other Mysteries

James Lee Farvour
IJG Inc.
1953 West 11th St.
Upland, CA 91786
Softcover, 304 pp.
\$29.95

by John B. Harrell, III

The TRS-80 Information Series, published by IJG Inc., is among the many superior publications now available documenting the Model I's hardware and software. James Farvour has followed his superior work, *Microsoft Basic Decoded & Other Mysteries*, with Volume VI, *TRSDOS 2.3 Decoded & Other Mysteries*. This book disassembles TRSDOS and explains each line of coding clearly and concisely.

TRSDOS 2.3 Decoded guides any programmer through TRSDOS's internal operations. You need no programming experience to understand or use this reference, but you must understand the basic architecture of a computer and have some experience in Assembly-language programming.

TRSDOS 2.3 Decoded consists of ten chapters covering various topics related to the disk operating system and its Model I implementation. Two appendices cover the data structures used by the operating system and Assembly listings of each operating system overlay, complete with comments.

The experienced reader can skip the chapters covering basic organization of the computer and generalizations on operating systems. A practiced programmer can read the remaining chapters in any order. Though much of the specific source code is not applicable to users with more sophisticated operating systems, many of the topics are valid for all operating systems and provide excellent insight into systems programming.

The first chapter, a thorough description of Model I hardware, illustrates the use of the Z80 microprocessor in the TRS-80 environment. It discusses input/output operations and explains the memory-mapped addresses where required. The last part of the chapter discusses operating systems in broad terms as a preview to succeeding

chapters.

The second chapter provides a general introduction to TRSDOS. It describes the functions and assigned memory addresses for the core-resident nucleus. A discussion of each system's overlay files provides the reader with a complete overview of the operating system prior to delving into the complex internal structures. One of the key data structures for any operating system is the disk directory, and chapter 2 provides its format.

The heart of TRSDOS is the SYS0/SYS file. It contains TRSDOS's nucleus and is always core-resident after

“TRSDOS 2.3 Decoded guides any programmer through TRSDOS's internal operations. You need no programming experience to understand or use this reference, but you must understand the basic architecture of a computer. . .”

you load the system. Mr. Farvour describes how the ROM routines and the boot loader contained in BOOT/SYS load the nucleus. He uses hexadecimal addresses to bracket his description of short code segments.

Where applicable, particularly important code segments are reproduced. Mr. Farvour uses this style throughout the book for emphasis.

A large section of the third chapter describes interrupt processing on the Model I. Mr. Farvour explains file operations and the disk file manager as part of the nucleus system. He includes an excellent description of managing file space on disk. Next comes a thorough explanation of the disk file loader and overlay loader, and the format of load (CMD) files.

Mr. Farvour considers SYS1/SYS the brain of TRSDOS. In chapter 4, he explains how the command-line interpreter reads and executes commands

for the system, then loads and executes the appropriate system command or user file. SYS1/SYS does this by working in harmony with SYS6/SYS to execute all standard TRSDOS commands.

Most interesting is the discussion of the function calls to SYS1/SYS that move character strings and validate them as file names, add a three-character extension to a file name, and parse parameter lists. This extremely powerful feature allows the programmer to pass complex parameters to his routines that the system interprets prior to execution.

Chapter 5 details the operation of SYS2/SYS, part of the TRSDOS file management system. The book presents many examples of disassembled coding to discuss the operations of Open and Init processing related to disk files. SYS2/SYS also contains the source code to determine the encoded value for passwords. As directory space is limited for a single file entry, it might be necessary to create an extension (overflow) entry linked to the file primary directory entry. Chapter 5 discusses the code for this SYS2/SYS function in detail.

To complete the discussion of the file management procedures, chapter 6 presents the details of SYS3/SYS. This system overlay contains the code to process disk file Close and Kill requests.

The nucleus calls system overlay SYS4/SYS whenever the system routines detect any error condition, and it can be invoked whenever user programs detect similar errors. SYS4/SYS provides the code necessary to interpret these error codes and to display comprehensible error messages.

Mr. Farvour points out a facility in SYS4/SYS that is not used by TRSDOS; it provides detailed error processing during debugging. SYS4/SYS is interesting because its unique data structure provides full error messages. This technique demonstrates a good method of text compression and is not limited to Assembly language.

Chapter 8 is devoted to Debug (SYS5/SYS), a machine-language monitor overlay integrated into TRSDOS. This overlay provides many useful examples of good programming techniques. The design objective was to keep the overlay small and within the bounds of the system overlay buffer. The techniques involved are valuable.

The book describes SYS6/SYS as the only overlay to load in the memory

Continued from p. 50

region above 5200H. It contains the coding necessary to perform the bulk of TRSDOS's commands. Chapter 9 clearly describes the many differences between SYS6/SYS and the other system overlays. This is the longest chapter in the book, with many comments on SYS6/SYS functions. It's interesting to study routines you've wanted to modify for your own use.

The last chapter details the operation of the boot loader contained in the read-only memory and on the system disk as BOOT/SYS. Mr. Farvour paces you through the system functions from the time you press reset until the time SYS1/SYS reads the first command.

Mr. Farvour describes BOOT/SYS as the only core-image program in TRSDOS. This means that sector zero of track zero is read into memory and executed as it exists on disk, unlike the other programs that require a system loader to read them into memory. This is incorrect. Sector zero is also a loader-format file. When you execute it with the command BOOT/SYS.WHO and depress the 2 and 6 keys while loading, it displays the proprietary notice from Tandy.

The NOP (00H) and CP (FEH) instructions located in the first 2 bytes of the sector are cleverly disguised loader codes that cause the system loader to skip the boot loader and go to sector 1 to continue.

Appendix I contains a clear and concise representation of all data structures used in TRSDOS. All entries in the nucleus module (SYS0/SYS) and the appropriate calling sequences are also listed. A nice feature of this appendix is the cross-reference showing all references from one overlay to another.

Appendix II provides the full source code to TRSDOS, complete with comments. The source code is in assembler output format, fully ready for reassembly if the industrious programmer wants to make changes to the system. This feature alone justifies the book's cost.

Mr. Farvour's book has one additional benefit: It identifies many errors that exist in TRSDOS 2.3. With this book and a disk file editor, you can make patches to correct these mistakes or add additional features yourself.

TRSDOS 2.3 Decoded is a valuable addition to the TRS-80 Information Series. I highly recommend it for the Model 1 owner's reference library. ■

Plus Explained
Crest Software
2132 Crestview Drive
Durango, CO 81301
\$12

by Wynne Keller

Crest Software's *Plus Explained* details the finer nuances of the sometimes confusing Profile III+ documentation.

The manual is daisy-wheel printed on yellow paper. The pages are numbered and punched to correspond with the Radio Shack version of the Profile III+ documentation. You insert each Crest page adjacent to the proper Radio Shack page. If you recall, however, Profile III+ is available from another company as well. My version of the data base came from The small Computer Company, and the page numbering is different. It would have been useful if Crest had included both sets of page numbers.

As I first read the Crest manual, I was irritated by the colloquial grammar

and puns. Further along, though, the relaxed style began to appeal to me. Leave staid text to standard documentation; an explanatory manual is allowed a light touch.

There are two potential users of this manual: those who didn't understand the original Profile III+ manual, and those who understood it but want to know more. Crest's manual meets the needs of the first group. If data bases in general, and Profile in particular, leave you confused, *Plus Explained* will help a great deal. The second group won't obtain as much benefit from the Crest manual, but at \$12, it's still informative and worth the price.

The package also includes two flow-chart posters. The posters are available separately for \$2. They are nicely designed, but are most useful when used along with the manual. I recommend that you purchase the whole package, not just the posters, if you need help with Profile.

A final suggestion: the Radio Shack TRS-80 Microcomputer News has been running a series of Profile III+ articles that may be useful to you. They begin with the October 1982 (Vol. 4, No. 9) issue. ■

Nodvill Diet Program
Nodvill Software
24 Nod Road
Ridgefield, CT 06877
TRSDOS 1.3
\$69.95 disk

Stephen F. Tomajczyk
80 Micro staff

Do you eat to live? Or do you live to eat? If you're either an athlete or an active individual, you probably live to

eat—and eat a lot. But did you ever wonder whether you're getting all the vitamins, minerals, and calories your active body needs?

The Nodvill Diet Program, a unique dietary software program from Nodvill Software, can help you.

First Things First

The Nodvill Diet Program totals the nutritive values of all the foods you eat during a given period of time and determines whether you've met your Recommended Daily Allowance (RDA) of nutrition. The program uses TRSDOS Version 1.3 and comes on disk without

an operating system.

Before you can use the program, you have to back up or copy the programs and data files on your own working disk. Use the utility program on your operating system disk. Nodvill Software recommends that you use two disk drives. It's not necessary, but it saves you from formatting several disks for a one-disk-drive unit.

The Nodvill Diet Program consists of six separate program modules: Main Menu, RDA Chart, Food List, Meal Menu, Daily Menu, and Grocery List. The display for each program is divided into two sections: an information-display area in the upper portion of the screen, and a control-option prompt in the lower section.

The information area displays the information and data for whatever program module you select and the control area lets you perform specific functions. Each program allows you to display existing data, add new information to a file, or edit a record that requires corrections or modifications.

RDA Chart

This is probably the most important of the five diet-oriented programs. All the other programs directly or indirectly refer to this RDA chart for comparative information.

The program menu prompts you for your name, sex, age, weight, height, and energy level. You can roughly determine the latter from an energy expenditure chart in the back of the manual. The chart lists the calories you burn during different activities. For example, walking 3 1/4 miles in an hour burns off 300 calories, and playing an hour's worth of tennis burns 420 calories. Select your normal activity and enter it into the RDA chart.

After you enter this personal information, the program displays how many units of niacin, iron, calcium, phosphorus, protein, calories, and vitamins A, B1, B2, and C that your body requires on a daily basis. With this information, you can modify your diet so you receive the nutrients your body needs.

One pleasing program feature is its taking into account whether a woman is pregnant or lactating. These are important factors since both conditions have a marked effect on a woman's body chemistry nutritive needs. I'm only surprised that the software didn't consider menstruation as well. This would seem to play a more important role in determining a woman's dietary needs each month, especially her mineral requirements.

Food List

Pizza, beer, potato chips, sponge cake, brownies, peanuts, and pecan pie all make one's stomach growl in hunger and anticipation. But are these tempting morsels good for you? Before you chow down next, why not consult the Food List program?

The program consists of 734 individual foods. For each item, the program provides a complete nutritional breakdown, including the amount of calories, vitamins, and minerals it contains, and how much protein, fat, carbohydrates, water, and fatty acids are

Tried and Proven:

LOG

THE ELECTRONIC NOTEBOOK
PROGRAM BY KSoft

One year old and a proven success! LOG for the TRS-80 (R) is still the only program on the market that addresses one very obvious problem: Despite data-base managers, word processors, and a dozen brands of spreadsheets, the fact is that most of the information people handle on a day-to-day basis just won't fit into fields, files, and codes.

LOG, on the other hand, is a program that 'thinks' like you do! LOG turns your video screen into a one page of a large notebook. Thumb slowly or search like lightning through your previous entries; modify, update, or erase as you desire with the built-in text editor. Append new pages with a single keystroke, up to 170 individual pages on a Model III diskette! Keep a separate LOG notebook on any diskette in any drive.

Yes! LOG supports hardcopy to your lineprinter.

Yes! All commands are single keystroke (no modes to remember).

Yes! You can access LOG while BASIC is running.

Yes! It really works!

People are using LOG to store address lists, programming notes, diaries, personnel files, recipes, record collections, and a hundred other uses. Think up your own applications. You'll probably use it every day.

Model I	48K	\$49.95	(upper case only)
Model III	48K	\$49.95	(upper/lower case)

Minimum system: 48K, 2 disk drives, DOS 2.3 (I) or 1.3 (III) required. Ask about other Operating Systems or hardware configurations.

present. What more could you ask?

Well, let me tell you. The program scans and displays all 734 food entries one at a time if you are trying to decide what to eat, or it searches out a particular item on the list at your request. The program has entries for all five basic food groups, plus a special junk-food data file.

If you can't find a certain food item, the program lets you add it to the list. Enter the measure and the nutritional values, both found on the food label. If you've come across an unusual measure for the food, such as grams or sticks, an equivalency chart in the back of the manual translates it into a common measure.

Meal Menu

Now that you know your daily nutritional needs and are aware of the nutritive value of your favorite foods, you can use the Meal Menu to put together the perfect meal for yourself, be it breakfast, lunch, dinner, or a snack.

You can enter up to ten individual

food items for each meal. As you enter each item, the program displays the cumulative amount of nutrients and calories of the meal. This allows you to alter either the food item or its quantity in order to meet your individual caloric and nutritive requirements.

Planning a meal is easy. You can either use the computer to search the food list for a specific item and enter its record number, or you can search the food list by food group, going through each until you find something that whets your appetite.

After selecting, say, chicken, enter how much you plan to serve or eat and the computer determines its caloric and nutrient value.

Each meal is labeled with a record number and meal type (breakfast, lunch, and so on) so you can easily refer to it and change it if necessary.

Daily Menus

The Daily Menu helps you plan meals for an entire week on a day-to-day basis. Each daily menu displays the

meals you've selected and the percentage of your daily vitamin, mineral, protein, calorie, carbohydrate, fat, and fatty acid requirements. Obviously, you aim for 100 percent in each category.

This program works closely with the Meal List. In fact, all entries you make for this program must first be entered on the Meal List program. If you're planning a menu, first make certain that the meal exists on the Meal List.

Each daily menu is found by its record number, the weekday, or your name. If you're undecided as to what to eat tomorrow, search through your entire menu file by the weekday to see what menus you've had in the past. Once you find a menu that makes your stomach growl, stop the computer scan and enter it for your present menu.

Grocery List

Now for the icing on the cake: Nodvill Software provides a grocery list program with their package. The program scans and displays each daily menu for the present week meal by meal. As you

review the meal list, check your refrigerator and cabinets for the food items listed. If you don't have the required items, enter its record number.

When you've finished reviewing the menu, the screen displays a grocery list of the items you need to buy. The next time you go to the store, print this list out and take it with you. You'll never have to worry about forgetting to buy something again!

Extras

Nodvill Software recognizes that this dietary program is only as good as the person using it. An individual unfamiliar with nutrition might actually harm himself by accidentally designing meals of little nutritive value.

In order to prevent this, they include a Meal and Menu Planning section in their manual to guide the user in proper

meal planning. They also provide dieting tips, a list of food sources with additional nutrients, and an example of an average day's diet.

*"One word of warning:
The Nodvill Diet programs
are not planned for those
with special health or
nutrition problems."*

Whether you're a serious athlete, a weekend recreationist, or an individual concerned with your health, this program is ideal for tracking and analyzing

your eating habits. Each program comes with sample data for you to follow. You can change these to suit your eating habits and adapt them to your nutritional needs.

One word of warning: The Nodvill Diet programs are not planned for those with special health or nutrition problems. If you are in this category, consult your physician before using the programs.

Although many might balk at the program's \$69.95 price, let me assure you that it is worth every penny, thrice over! Not only will you be pleased with it, you'll feel secure in knowing that your body receives all the vitamins, minerals, and calories that it needs on a daily basis.

This professional and detailed program is the Cadillac of dietary software. ■

★★★★★

D-92 Printer
Data Impact Products Inc.
745 Atlantic Ave.
Boston, MA 02111
\$399.95

by Terry Kepner

What would you think of a printer that gives you six programmable

printing modes, six different printing pitches, six or eight lines per vertical inch spacing, an 800-character buffer, data processing (7 by 9) and correspondence quality (11 by 9) print modes, selectable unidirectional or bidirectional printhead movement, 100-characters-per-second print speed, and costs only \$399.95?

The D-92 has all these features and more. The printer is small, only 17

inches wide by 9.75 inches deep by 6.5 inches high, but in that small space it delivers a lot of power. The print speed is impressive, especially when you consider that the Radio Shack DMP 100, also \$399.95, is rated at 30 cps.

With this high speed you get the full upper/lowercase 96-character ASCII set, with descenders and underline. The character modes are as impressive as the speed. The data-processing mode is good enough to be compared to the correspondence-quality modes of other printers.

The six programmable printing fonts are actually two sets of three fonts, one set in the data-processing mode and the other set in the correspondence-quality mode. Each set contains: a standard font (one-pass), an enhanced font (two-pass), and an expanded font (each character double-width).

Similarly, the six pitches are two sets of three: 10, 12, and 16.5 characters per inch. One set is in standard mode and the other is in expanded mode (double-size characters that produce 5, 6, and 8.25 characters per inch). See Table 1 for six pitches available (40, 48, 66, 80, 96, and 132) and a sample of the enhanced printing.

The character buffer's capacity is 800 characters (about ten lines of print), so it lets your program operate at higher efficiency than nonbuffered printers. The printer prints the characters as you fill the buffer.

The D-92 Dual Mode Printer

New Release

Now supports Mailing Lists, Form Letters, "ZAP-PROCESSING", and 18 more printer drivers.

**STILL ONLY
\$69.95**

IF YOU STILL THINK YOU
HAVE TO SPEND \$200 FOR A
GREAT WORD PROCESSING
SYSTEM, THEN YOU NEED TO
READ THIS AD!!

The Magnificent WORD PROCESSING SYSTEM

For the TRS-80 Model I and III

- Supports over 50 different popular printers including OKIDATA Microlina 80, 82A, 83A, 84A, Oume, Centronics 737, 739, Radio Shack Line Printer IV, VI, Daisy Wheel II, EPSON MX-80, MX-100, Grafrax, Grafrax Plus, Gemini-10, Gemini-15, NEC PC-8023A-C, Spinwriter 5510, 5515, 5520, 5525, C. Itoh Prowriter 8510, Starwriter FP-1500, F-10, Tec 8500R, Smith-Corona TP-1, Brother HR-1, COMREX Com-Riter CR-1, IDS Microprism 480, and Diablo 630.
- Supports proportional space right-margin justifying on Centronics 737, 739, Radio Shack Line Printer IV, Daisy Wheel II, Grafrax Plus, NEC PC-8023A-C, Spinwriter 5510, 5515, 5520, 5525, C. Itoh Prowriter 8510, Starwriter FP-1500, F-10, and Diablo 630.
- Powerful Mailing List and Mail-Merge capabilities for personalizing standard legal documents and Form Letters, handling infinite number of data records per run, infinite number of data fields per data record, and data fields as large as up to 1000 characters each.
- Brand new feature called "ZAP-PROCESSING", allows you to display and edit any type of data or program file in "ZAP" (byte-hexadecimal) format.
- Any character or symbol your printer can print, even dot graphics, can be used in mid-line printing with the Special Character feature.
- Written in fast Z80 machine language with type-ahead key-stroke buffering for speed typing.
- Single key-stroke control of all editing functions for ease of use.
- Continuous on-screen display of word count, line count, and free memory count.
- Superscripts, subscripts, underlined, bolded, expanded and condensed type styles - combine and intermix within a line.
- Automatically justifies and word-wraps on the screen as you type.
- Search, Replace, and Global Search and Replace.
- Odd and even page user-definable headers, footers, and page number lines, with automatic page numbering.
- User-definable linespacing, sheet size, top, bottom, left, and right margins.
- Move blocks of text and copy blocks of text from disk, to disk, and within the text.
- Examine disk directory on any disk and kill files while editing.
- Powerful full-screen editing features for EDTASM and BASIC files, including automatic renumbering of lines.
- Built in function to dump contents of screen to printer.
- Print-previewing formats text, inserts headers, automatically numbers pages, etc. on the screen without printing it on paper.
- Page by page pausing capability for sheet fed printers.
- Supports both parallel and serial printers.
- Printer control code access.
- Works with NEWDOS, NEWDOS80, TRSDOS, MULTIDOS, LDOS, and DOSPLUS - Single or Double Density.
- Compatible with most all available spelling checker programs.

GUARANTEE

Many word processing systems claim theirs are the best, but few would dare guarantee them. Not us! We are confident that ZORLOF is the most useful word processing system on the market for under \$200. If you don't agree, return it within 30 days for a full refund.

Add \$2.00 shipping & handling. Florida residents add 5% sales tax. Checks require 3 weeks to clear banks.

Choose a Quality Computer Services hard disk system for your old or new microcomputer

1. Because it is ultra-reliable and warranted to stay that way.

A hard disk drive from Quality Computer Services is compatible with just about any microcomputer, including those listed at the right. So rugged that hundreds are operating on five continents—including many remote sites where service is not available. When you buy one you get a free warrantee for a full year. (It's free because we don't think you'll ever have to use it.)

Learn more about QuCeS hard disk systems—choice of 6, 12, 20 or 40 megabytes; easy hookup; expansion and backup options; new removable 5 megabyte Winchester disk; high-performance specifications; and name of nearest dealer.* Just return the coupon. Or if you prefer, call or write QuCeS.

* Dealer inquiries invited.

2. Because it offers up to 40 million bytes of high-speed performance.

It's nice to know that QuCeS prices are very competitive. Our price for 20 megabytes for example, including 1-year warrantee, attach software and all hardware, is just \$2999.

Choose QuCeS when you want the best ... for a little less

3. Because you'll get the best ... for a little less.

QuCeS hard disk systems are compatible with Apple II®, Epson™, Heath/Zenith™, IBM®, TRS-80® I, II, III, XVI, Osborne™, many S100™ based, and most other popular microcomputers.

If you fill the buffer, your computer waits for the printer to print a character before it sends another. As long as you don't fill the buffer before the printer can print all the characters you send, your computer operates at full speed without waiting for the printer to finish before going to the next part of your program.

One odd but intriguing feature of the printer is its built-in serial and parallel interfaces. Only one of them is connected, depending on whether you order a serial or parallel printer.

As a further oddity, the manual warns you that changing the configuration of your printer from serial to parallel, or vice versa, voids the factory warranty, but then it tells you how to do it! The RS-232 option supports baud rates of 110, 150, 300, 600, or 1200 baud. Higher baud rates are optional.

The printer has three front panel controls: Single Line Feed, Form Feed, and Printer Select/Deselect. A self test mode comes with the line feed and form feed switches. In addition to these switches, you have an on/off switch and a form size selection switch that allows you to select any number of lines per page as a form. Software can override the form size switch.

These are all standard features. The character fonts, printing modes, pitches, underline, form length, uni- or bidirectional print head movement, carriage return, line feed, form feed, and line density (6 lpi or 8 lpi) features are all available through software control.

The printer is well-designed. The print ribbon is accessible without removing the cover. A single row of DIP switches inside the printer controls the RS-232 controls, self-test mode, and printer line feed/carriage return response. You remove four screws and lift the cover to get at them.

One disadvantage of the printer is the lack of a paper platen knob. You have to use the line feed or form feed switches to advance the paper. Form feed advances the paper five lines per second. However, you can feed paper from the bottom, back, or top of the printer.

The manual is the printer's biggest failing. Its instructions are incomplete. It does describe how to use the standard features, but the descriptions of how to use dot-addressable graphics are poor. The manual does not contain even one example of a graphics command and

what it prints.

From a hardware point of view, the manual is exceptional, giving thorough descriptions of how to connect the RS-232 port to your printer (including hardwiring the printer to match your computer's nonstandard RS-232 port), directions to maintain and troubleshoot the printer, several real pictures of the inside of the printer with important parts identified, and a parts layout drawing of the printed-circuit board.

The documentation needs a short summary page of the various control codes and the effect they have on the printer.

If you want more than the standard features, you can get a tractor feed mechanism for \$50, dot-addressable graphics with four plot densities from 33.3 to 66.6 dots per inch for \$30 (graphics requires the tractor feed option), a switch at the back of the printer to select either 7-by-11 character fonts for \$20, a 2K memory buffer for \$35, a serial port for \$60 (parallel is standard), a cut-sheet feeding tray for \$45, remote printer control (Control X, Control Y) for \$20, a sound cover for \$30, and optional X-on/X-off serial buffer control

for \$60.

A completely configured printer costs \$749.95, but a printer with dot graphics, tractor feed, and sound cover (what the average user wants) costs only \$509.95. These prices don't include the cost of a cable (\$30-\$40) or extra ribbon cartridges (\$14.95, with a print life of five million characters).

The dot-addressable graphics are straightforward: Each line of graphics is 512 dots wide by six dots high. Set the printer to graphics mode, send 512 bytes of graphics data, and watch the printer print. The top dot is the least significant byte of each column.

Recently, the options for the D-92 were on sale for 25 percent off list, a substantial discount. If you're interested in this printer, check with Data Impact Products to see if the discount is still available, or if the prices have changed.

What I liked best about this printer is that 60 seconds after I opened the box the printer was connected to my computer and printing merrily away. After seeing and reviewing many printers, this is the one I'll buy for my personal use. ■

Telewriter 64

Cognitec

704 Nob Ave.

Del Mar, CA 92014

Color Computer, 64K

\$49.95 cassette, \$59.95 disk

(Discounts available when

upgrading from earlier versions)

By Scott L. Norman

Telewriter 64, the latest version of Howard Cohen's powerful word processor, exemplifies the third wave of Color Computer software. It takes advantage of the CoCo's ability to disregard Color Basic ROMs and address 64K of RAM. It's also a stand-alone program; it senses the amount of memory available, and requires no other operating system to set the memory map to 64K.

I have been using Telewriter almost since its inception. I reviewed version 1.0, the original cassette rendition (80 Micro, May 1982, p. 208). By the time the review appeared in print, I had acquired a disk drive and moved on to version 2.0, which became my most-used program. Cognitec has eliminated almost all of the few remaining deficiencies with Telewriter 64.

Upgrading from 32K to 64K gives the user more memory in which to store text. The text buffer doesn't double in size, though (at least not in a disk system), because Telewriter 64 is considerably larger than its predecessors. Many new features have been added, enough to make a re-examination worthwhile.

I'll skip over most of the features common to previous versions of the program. If you are curious but completely unfamiliar with Telewriter, you should know that it is a complete package for preparing and editing text, and for formatting the resulting material for printing.

It features a full-screen editor, high-density text displays with character sets defined in software, and a set of commands that you can embed in the text for real-time control of print parameters like margins, line lengths, and character fonts.

The embedded commands take the form of uppercase letters, sometimes followed by numbers. Since the Color Computer has no separate control key,

Telewriter identifies them as commands rather than text through the clear/period (.) combination.

This causes the control character ^, an upward caret, to appear on the screen when you enter embedded commands. For brevity, the key sequence clear/.x will be represented by ^ X in this review.

Refer to my earlier review for further details of Telewriter's basic operation. I want to concentrate on Telewriter 64's new features. I'll refer to the package as TW64, from now on. Also, I'm going to consider only the disk version, based on my experience.

Important Enhancements

If the computer has a good 64K RAM aboard, TW64 gives the user just under 25K of text buffer in the disk version and 40K with cassettes. This is certainly a worthwhile improvement over

"Cognitec has eliminated almost all of the few remaining deficiencies with Telewriter 64."

the 18K or so provided by earlier versions in a 32K computer, but in a way it's the least of the program's enhancements.

Of greater significance are other features including optional right justification of printed text, high-density screen formats for checking the appearance of text before printing, page-break finders for avoiding awkward-looking printouts, tab stops, and an additional utility program for ASCII file I/O (input/output).

Aligned, or justified, right margins improve the appearance of almost any prose. Formal business correspondence, school reports, and manuscripts certainly look better that way. Earlier versions of Telewriter could not add spaces to a printed line in order to square up the right margins, but TW64 incorporates this feature with a single command.

Like its predecessors, TW64 has three screen menus: Main, Format, and Disk

I/O. One of the new format options is called justify. Like everything else on this menu, it is a numerical parameter that you can alter from the keyboard. The default value is zero, or no justification.

To square up the right margins, type J/1/enter. This is standard Telewriter procedure: The first letter of the option generates a blinking cursor in the appropriate place on the menu, and entering the new numerical value completes the update cycle.

I timed TW64 printing single pages with and without justification, and didn't see any significant difference. However, my Line Printer VII runs at a miserable 600 baud; a faster printer might reveal whether or not the justification process has any measurable effect on speed. In any case, the screen display as TW64 pads a line with blanks is entertaining enough to make up for any slight time loss.

Sometimes you might want to protect a block of text from justification. You can insert the new embedded command ^; before and after the text that you do not want justified.

Even if you don't use justification, this command is useful for keeping a series of short lines, set flush against the left margin, from being merged into a single line by TW64's alignment command. Earlier versions of the program required that you indent each unaligned line two spaces and precede it with a \.

Only the final printout is justified by this option. The video still exhibits ragged right margins. The new high-density text options make the display itself much more useful for general formatting than ever before.

Line and Page Options

Telewriter previously offered a 24-line by 51-character video format. TW64 adds two options: 64 or 85 characters per line. These normally use their own three-pixel-wide character set. You can toggle back to the standard four-pixel-wide character set by entering clear/;. However, this is marginal for 64-character lines and almost useless for anything longer.

The high-density options aren't much good for text entry and proofreading unless you have a good video monitor and a baseband output modification for your computer. Their value lies in checking the formatting of printed

Telewriter-64™

the Color Computer Word Processor

- 3 display formats: 51/64/85 columns × 24 lines
- True lower case characters
- User-friendly full-screen editor
- Right justification
- Easy hyphenation
- Drives any printer
- Embedded format and control codes
- Runs in 16K, 32K, or 64K
- Menu-driven disk and cassette I/O
- No hardware modifications required

THE ORIGINAL

Simply stated, Telewriter is the most powerful word processor you can buy for the TRS-80 Color Computer. The original Telewriter has received rave reviews in every major Color Computer and TRS-80 magazine, as well as enthusiastic praise from thousands of satisfied owners. And rightly so.

The standard Color Computer display of 32 characters by 16 lines without lower case is simply inadequate for serious word processing. The checkerboard letters and tiny lines give you no feel for how your writing looks or reads. Telewriter gives the Color Computer a 51 column by 24 line screen display with *true lower case characters*. So a Telewriter screen looks like a printed page, with a good chunk of text on screen at one time. In fact, more on screen text than you'd get with Apple II, Atari, TI, Vic or TRS-80 Model III.

On top of that, the sophisticated Telewriter full-screen editor is so simple to use, it makes writing fun. With single-letter mnemonic commands, and menu-driven I/O and formatting, Telewriter surpasses all others for user friendliness and pure power.

Telewriter's chain printing feature means that the size of your text is never limited by the amount of memory you have, and Telewriter's advanced cassette handler gives you a powerful word processor without the major additional cost of a disk.

...one of the best programs for the Color Computer I have seen...

— Color Computer News, Jan. 1982

TELEWRITER-64

But now we've added more power to Telewriter. Not just bells and whistles, but major features that give you total control over your writing. We call this new supercharged version Telewriter-64. For two reasons.

64K COMPATIBLE

Telewriter-64 runs fully in any Color Computer — 16K, 32K, or 64K, with or without Extended Basic, with disk or cassette or both. It automatically configures itself to take optimum advantage of all available memory. That means that when you upgrade your memory, the Telewriter-64 text buffer grows accordingly. In a 64K cassette based system, for example, you get about 40K of memory to store text. So you don't need disk or FLEX to put all your 64K to work immediately.

64 COLUMNS (AND 85!)

Besides the original 51 column screen, Telewriter-64 now gives you 2 additional high-density displays: 64 × 24 and 85 × 24! Both high density modes provide all the standard Telewriter editing capabilities, and you can switch instantly to any of the 3 formats with a single control key command.

The 51 × 24 display is clear and crisp on the screen. The two high density modes are more crowded and less easily readable, but they are perfect for showing you the exact layout of your printed page, *all on the screen at one time*. Compare this with cumbersome "windows" that show you only fragments at a time and don't even allow editing.

RIGHT JUSTIFICATION & HYPHENATION

One outstanding advantage of the full-width screen display is that you can now set the screen width to match the width of your printed page, so that "what you see is what you get." This makes exact alignment of columns possible and it makes hyphenation simple.

Since short lines are the reason for the large spaces often found in standard right justified text, and since hyphenation is the most effective way to eliminate short lines, Telewriter-64 can now promise you some of the best looking right justification you can get on the Color Computer.

FEATURES & SPECIFICATIONS:

Printing and formatting: Drives any printer (LPV/II/VIII, DMP-100/200, Epson, Okidata, Centronics, NEC, C. Itoh, Smith-Corona, Termini, etc).

Embedded control codes give full dynamic access to intelligent printer features like: underlining, subscript, superscript, variable font and type size, dot-graphics, etc.

Dynamic (embedded) format controls for: top, bottom, and left margins; line length, lines per page, line spacing, new page, change page numbering, conditional new page, enable/disable justification.

Menu-driven control of these parameters, as well as: pause at page bottom, page numbering, baud rate (so you can run your printer at top speed), and Epson font. "Typewriter" feature sends typed lines directly to your printer, and Direct mode sends control codes right from the keyboard. Special Epson driver simplifies use with MX-80.

Supports single and multi-line headers and automatic centering. Print or save all or any section of the text buffer. Chain print any number of files from cassette or disk.

File and I/O Features: ASCII format files — create and edit BASIC, Assembly, Pascal, and C programs, Smart Terminal files (for uploading or downloading), even text files from other word processors. Compatible with spelling checkers (like Spell 'n Fix).

Cassette verify command for sure saves. Cassette auto-retry means you type a load command only once no matter where you are in the tape.

Read in, save, partial save, and append files with disk and/or cassette. For disk: print directory with free space to screen or printer, kill and rename files, set default drive. Easily customized to the number of drives in the system.

Editing features: Fast, full-screen editor with wordwrap, block copy, block move, block delete, line delete, global search and replace (or delete), wild card search, fast auto-repeat cursor, fast scrolling, cursor up, down, right, left, begin line, end line, top of text, bottom of text; page forward, page backward, align text, tabs, choice of buff or green background, complete error protection, line counter, word counter, space left, current file name, default drive in effect, set line length on screen.

Insert or delete text anywhere on the screen without changing "modes." This fast "free-form" editor provides maximum ease of use. Everything you do appears immediately on the screen in front of you. Commands require only a single key or a single key plus CLEAR.

...truly a state of the art word processor... outstanding in every respect.

— The RAINBOW, Jan. 1982

PROFESSIONAL WORD PROCESSING

You can no longer afford to be without the power and efficiency word processing brings to everything you write. The TRS-80 Color Computer is the lowest priced micro with the capability for serious word processing. And only Telewriter-64 fully unleashes that capability.

Telewriter-64 costs \$49.95 on cassette, \$59.95 on disk, and comes complete with over 70 pages of well-written documentation. (The step-by-step tutorial will have your writing with Telewriter-64 in a matter of minutes.)

To order, send check or money order to:

material.

TW64's main menu has a new option, C (for characters/line), that allows the video display to duplicate the length of a printed line. Usually you compose text in the default 51-character mode for best readability, then reset the C parameter to the desired length of a printed line and switch to one of the high-density modes for final checking.

The manual advises choosing the mode greater than the desired printer line width. If you want to print 60-character lines, set C to 60 and select the 64-character mode with the command clear/+. Clear/@ brings up the 85-character mode and clear/zero gets you back to 51 characters.

Incidentally, if you change the C parameter in this way, you find your new value preserved when you call up the format menu. C is only accessible from format in earlier versions of Telewriter.

The relationship between the display mode, which defines the maximum possible length of a video line, and the C parameter, which sets the actual length, is a little hard to grasp at first. It is worth the effort to do so, however, because the ability to tinker with the display is the key to enjoying several of TW64's advanced features.

Page breaks, for instance, look unprofessional when they split the closing of a letter. It isn't attractive to have the first line of a paragraph at the bottom of a page, or the last line at the top of one. Full-featured word processors allow the user to examine the points at which pages of text end so you can take corrective action to avoid such embarrassments.

A new Vertical Tab command advances the cursor by exactly one page to give an on-screen indication of where the breaks appear in the printed material. Of course, you must first set up the format you use for printing so that the program can count margins, characters per line, and lines per page correctly. Use the format menu and choose the proper display mode.

Once you establish the format, you can examine page breaks by moving the cursor to the top of the text and hitting clear/V repeatedly. Each stopping point is the first line of a new page. If you don't like where it falls, you can fix it.

Corrections usually take the form of additional blank lines or an embedded new page command to force a new paragraph to begin at the top of the next

page. You can also rewrite some material when page breaks occur in the middle of paragraphs.

Once you make such a change, go back to the top of the text or to a previous page break to continue scanning. The very last examination should always begin at the top, because embedded changes in line width (^C commands) can temporarily fool the system.

In general, the page-finder routine takes proper account of such changes as they occur. However, confusion can result when you make page break corrections in the middle of a section that uses a temporarily altered line length.

Although this application is not stressed in the manual, the page finder is also useful for skipping rapidly up and back through large sections of text. It provides an alternative to scanning text one video screen at a time.

The page finder ignores embedded

"In general, the page-finder routine takes proper account of such changes as they occur."

command lines and nonprinting comments when counting the lines per page. You have to make an allowance for headers printed at the top of each page, though.

To get the line count right, the format menu's upper margin parameter U must be temporarily set to a fictitious value. The recipe is (True upper margin) + (Number of line feeds between header and text) + 1. Remember to reset U to its correct value before printing.

I slipped in something about nonprinting comments two paragraphs back. They are another new feature of TW64, and make use of a versatile new embedded command: ^T.

^T corrects one annoying deficiency of earlier Telewriters: the lack of user-definable tab stops. To set tabs in TW64, you use ^T followed by a series of two-digit numbers as the first line in a text file.

For example, the command line that sets up indentation for paragraphs and

the inside return address on my correspondence is:

^T 04 40 49

(Print lines begin at 00, so 04 refers to the fifth position.) The clear/enter combination serves as the tab key.

Incidentally, tabs are always referenced to the left margin of the text, not the edge of the paper. Your text stays in order if you change the margin later.

If ^T, followed by a space, appears anywhere other than the top of a text file, whatever follows on the same line is treated as a nonprinting comment. Thus you can put permanent page break markers in your text. Such comments are useful to remind yourself of the purpose of complicated sets of embedded commands—just as a Basic REM statement can jog your memory.

If ^T is followed by a bit of text without an intervening space, that text is printed but isn't subject to alignment (if it is less than half a line long). You can use this for the inside address of a letter, although I prefer to enclose the entire thing in a pair of ^; commands.

ASCII I/O

One important TW64 feature is the dramatically improved ASCII I/O capability. Telewriter normally writes tape or disk files in the binary format used by SAVEM and associated commands. However, it is often useful to create ASCII files; that's the format used by spelling checker programs, for one thing.

Cognitec included a conversion routine called CONVERT/XXX with earlier Telewriter disks, but it had some flaws. The worst was its inability to guide certain formatting commands through a complete binary-ASCII-binary conversion routine.

The TW64 disk now contains two copies of the normal binary I/O file names S/XXX and S/BIN, and S/ASC, which does the same job in ASCII. When you invoke the main menu's D command to call up the disk I/O menu, you normally get S/XXX.

To generate an ASCII file, you must return to Basic with the B command and enter RUN "S/ASC". The screen then displays another disk I/O menu, but with an "ASCII I/O" title.

Any text file generated before the switch is still in RAM. You can save it

Small wonder.

Introducing: The big news in small computer software.

Open your eyes to the computer software company that's been creating wonders for the past seven years.

While our name may be new to some of you, The Small Computer Company is well known to a growing segment of the computer industry.

They know that we're the company who developed Profile® Plus and Profile III Plus filing system software for Radio Shack.

But the really big news is that now, whether you're an end-user, dealer, or microcomputer manufacturer, you can order our small wonders directly from us, to fit your every need. Our software is so unique, it even has its

own name: Smallware™. Smallware is software that combines high quality with customer support in a complete product line.

Now you'll know who to call for Profile enhancements on the Model II or III, filePro™, our CP/M® electronic filing system, custom designs and more. Even if all you need is a little consultation or program modification.

The Small Computer Company is a highly experienced software design firm that creates award-winning Smallware. And we stand behind our work with a commitment to our customers, large and small. See for yourself.

For further information, call (212) 398-9290. To order, ask for Mr. Burton.

The Small Computer Company, Inc.

230 West 41st Street, Suite 1200, New York, New York 10036

Smallware and filePro are trademarks of The Small Computer Company, Inc. CP/M is a registered trademark of Digital Research, Inc. Profile is a registered trademark of Radio Shack.

through this menu and manipulate it with other programs. You get an active video display during the save, by the way.

You can subsequently read the corrected files back through S/ASC and save them again in binary with S/XXX, if you like. That's the drill for using a spelling checker. Although it takes several minutes to write the ASCII file, the advantage of the new system is that all embedded commands are handled properly.

In a single-drive system, you must copy S/XXX and S/ASC onto each disk used for text files. If you have multiple drives, you need them only on the system disk in drive zero.

Should you know ahead of time that you'll be doing a lot of ASCII I/O, you can avoid much of the menu swapping. Make another work disk with S/ASC as the only I/O control file, and rename it S/XXX. Calling for disk I/O automatically sets you up for ASCII operation.

Cassette-based TW64 systems also support both output formats, although it requires a little more work. Appropriate I/O files are found on the flip side of the system tape.

Other Features

TW64 has several other features and some of them are interesting. I will not cover Cognitec's rather convoluted schedule of prices for upgrading from earlier versions of the program; contact them directly for that information.

Prior versions of the program required that you precede embedded command lines with a space to keep the alignment routine from blending them into one long line. This is no longer necessary; apparently the presence of the ^ control character in the first position of a line is enough.

Telewriter has always been able to send control codes to a printer through the embedded D command. For example, the line

^D2 31

defines a control character (2) that, when invoked, tells my LP VII to shift to double-width print. The invocation consists of typing clear/2, which inserts a reduced-size 2 that looks rather like an exponent, into the text.

TW64 has a new wrinkle: It is now possible to print some of these control codes. The definition command is ^DP,

followed by the appropriate numerical value. For example, the ASCII value for the up arrow is 94, so

^DP3 94

means that clear/3 embedded in text causes such an arrow to be printed: ^.

Wild card characters have been added to the global search/replace options. The ubiquitous ^ in any position of a search pattern causes that position to be treated as a wild card and ignored.

One handy example mentioned in the documentation is finding multi-word

*"As you can tell,
I think a great deal
of TW 64. It is now
my standard tool
for text processing
and that means something
like 10,000 words
per month of
final-draft material."*

combinations that might be split by a carriage return in the final text. For instance, specify

abra^cadabra

as the search target results in a match even if "abra" came at the end of one line and "cadabra" at the beginning of the next.

TW64's format menu has been revised. In the old days, page numbers were always centered at the bottom of each sheet. A new option, W(here), allows the user to specify the numeral's position along a print line.

You calculate the position by adding the value of the left margin to the number of spaces by which the figure should be indented. Five spaces in from a ten-space margin means a W value of 15.

In fact, page numbers need not appear at the bottom at all. You can incorporate them in a header through the use of the backslash character, obtained by

hitting clear/,. The backslash goes into the header definition line at the place where the number is to appear. You still have to specify the initial page number through the N parameter on the format menu.

Now you can print a header on the first page of a manuscript. Just follow the H in the definition line with a plus sign before specifying the number of blank lines between header and text.

Another new format parameter, O(ne Page), instructs the program to pause and await another print command after printing a single page. This is useful for correspondence on single sheets in a friction-feed printer. The default value is zero, change it to anything else less than 128 to get the pause.

Telewriter's ability to handle specific printers is expanded. The old E(pson) parameter has been changed to something called EPS/OKI/LF, and now treats special line-feed/carriage return combinations. It can also specify whether or not the Grafrax option is present on an Epson MX-80.

Summing Up

As you can tell, I think a great deal of TW64. It is now my standard tool for text processing, and that means something like 10,000 words per month of final-draft material.

In terms of features, TW64 is beginning to approach even WordStar, the standard of comparison from CP/M systems. The comparison will be even more valid if Howard Cohen produces a mail-merge package. The possibility is mentioned in the TW64 manual, so this is more than speculation.

Of course, I still wish for a Move command that would automatically delete a chunk of material from its old location after a move. As things stand, TW64 users still have to do a block copy followed by a delete operation.

The ability to verify information written to disk without emptying RAM would be nice, too. Cassette Telewriter users have been able to do this all along. And how about printing headers and footers? Or different headers on alternate pages?

The fact that such questions are appropriate is a measure of TW64's maturity. It is worthy of consideration as a writing tool for major projects, perhaps even up to book length. That's a compliment to the program, and to the Col- or Computer itself. ■

REVIEW DIGEST

Pocket Magic, Bill R. Behrendt, Prentice-Hall Inc.; 96 pp., \$17.95 hardcover, \$9.95 softcover.

"Just as a dog is not meant for bipedal locomotion, the TRS-80 PC-1 is not designed for computer game playing. . . . Behrendt's games are certainly ingenious, and he is to be congratulated. But even his efforts cannot turn the PC-1 into a decent game-playing machine. For little more than the price of the PC-1, and certainly for the price of the PC-2, one can buy a computer that will allow the playing of far superior games." *Personal Computing*, April, p. 150.

Sands of Egypt, Tandy/Radio Shack, Fort Worth, TX 76102; Color Computer, \$29.95.

"Sands of Egypt is more than an adventure, it's an animated adventure. You tell the computer you want to go east and the scene on your screen shifts as you walk east. If you dig and find an object, you see the object. . . . Because of its excellent use of graphics animation, Sands of Egypt represents a new standard for adventure games." *The Color Computer Magazine*, April, p. 56.

The Genie in the Computer: Easy Basic Through Graphics (TRS-80 Edition), Rachel Kohl, Laura Karp, Ethan Singer, John Wiley & Sons Inc.; 169 pp., \$12.95, softcover.

"Learning to write Basic programs for the TRS-80 Model I and III doesn't have to be a long, laborious task. If you can put your intellectual ego aside for a few hours, turn on your machine, open *The Genie in the Computer*, and prepare to have some fun while learning the fundamentals of programming. Simple-minded language or not, this book will have you writing a program by the time you finish page two, which compensates for whatever flaws it may have." *Personal Computing*, April, p. 149.

Audio Spectrum Analyzer, Tandy/Radio Shack, Fort Worth, TX 76102; Color Computer, \$20.

"Every hi-fi buff is a fun lover at heart, and there is no denying that the Spectrum Analyzer is a lot of fun. In the kaleidoscope mode, it becomes a low-cost color organ with added capabilities such as freeze-frame. In the graph mode, the correspondence between music and display is absolutely mesmerizing. If you're the type of person who likes to watch the Mahler symphony, the Audio Spectrum Analyzer is well worth investigating." *Popular Computing*, April, p. 193.

The Professional Keyboard, Spectrum Projects, 93-15 86th Drive, Woodhaven, NY 11421; Color Computer, \$89.95.

"Once in place what we had, essentially, was a Model I keyboard in a Color Computer case. The fit was perfect. The touch was good and there were no real problems. . . . We have heard more complaints about the Color Computer's keyboard than anything else. For those of you who do not like it, the Professional Keyboard offers an excellent alternative that is well put together and works without any problem." *the Rainbow*, March, p. 20.

Preread, Prickly-Pear Software, 9822 E. Stella Road, Tucson, AZ 85701; Color Computer, \$24.95.

"If you have a young child you would like to see receive a head start in reading, Preread, by Prickly-Pear Software, is an excellent tool with which to begin. Three programs are contained within the Preread package. They can teach the young child from three years up important letter recognition. . . . My son, a kindergartner, thoroughly enjoyed all three programs. They keep the child's interest and are viewed as a game, not a test, although a percentage score is given at the end of each program." *the Rainbow*, March, p. 172.

TRS-80 Data Communications Systems—A Guide to the Operation of TRS-80 Microcomputers as Communication Devices, Frank J. Derfler, Jr., Prentice-Hall Inc.; 170 pp., \$12.95 softcover.

"Communications expert Frank Derfler characterizes our present age as 'the second great information explosion,' and compares it to the 'third wave' of the industrial revolution. Against this backdrop comes the easy availability of high-technology computer equipment, in sophisticated communication settings, and in kitchens and dens across the nation.

"The personal computerist first needs a friendly introduction and reference in data communications to guide him through the maze of new concepts and jargon. Derfler's book . . . provides a concise but thorough explanation of personal computers as communication devices. It concentrates on the hardware and software for TRS-80 microcomputers." *Softside*, March, p. 75.

Stinger, Eigen Systems, P.O. Box 1806, Austin, TX 78766; Color Computer, \$34.95 ROM Pak, \$24.95 cassette, \$29.95 disk.

"The objective of Stinger is to capture as many honey bees as possible. You have six bee catchers at your command. They attempt to capture honey bees by overtaking each one and landing on top of it. The honey bees are protected by stinger bees and the Queen bee, which emits killer bees if the stinger bees have trouble protecting the honey bees. When a stinger or killer bee catches one of your bee catchers, they kill it. The game is over when you lose all six bee catchers. . . . Stinger provides a high degree of excitement and a good test of your motor skills." *The Color Computer Magazine*, April, p. 62.

Drivers and DCBs

by Jerry Lindsly

Are you curious about machine-language programming? The ROM subroutines explained and demonstrated here will help you learn.

ROM subroutines make machine-language programming easier. Basic ROM, Disk Basic, DOS, and machine-language programs use driver routines to communicate with various input and

output devices. An I/O driver is used each time an I/O request is made. Standard drivers for keyboard, video, printer, and cassette devices are built into the ROM for Level II users, while disk users

find some of them located in RAM as well, along with disk I/O drivers.

Drivers are machine-language routines with the logic needed to input or output information to or from a specific hardware device in a system.

A driver can be located anywhere in memory. Therefore, if you plan on writing your own drivers or enhancing present ones, be certain that the RAM areas used by your routines don't conflict with RAM areas used by ROM, Disk Basic, or DOS.

Driver Utilization

For each device in the system, a device control block (DCB) is set up. The keyboard (*KI for keyboard input), video (*DO for display output), and printer (*PR for printer) DCBs are located at addresses 4015H-402CH (see Table 1). Each of these DCBs consists of: a 1-byte device type; a 2-byte driver address; 3 bytes that the driver uses to store data pertaining to that driver; and a 2-byte device ID (KI, DO, or PR in ASCII).

Device Type

The device type is used by a master I/O routine in ROM (at 3C2H) to determine whether the action requested is legal.

Here is a bit breakdown of the device type:

Address (HEX)	Comments
4015	Device type (01) Keyboard DCB
4016	LSB—Driver address (3E3H)
4017	MSB—Driver address
4018	Unused (0)
4019	Unused (0)
401A	Unused (0)
401B	"K"
401C	"I"
401D	Device type (07) Video DCB
401E	LSB—Driver address (458H)
401F	MSB—Driver address
4020	LSB—Cursor Position (3C00H)*
4021	MSB—Cursor Position *
4022	Cursor Character (0)*
4023	"D"
4024	"O"
4025	Device type (06) Printer DCB
4026	LSB—Driver address (58DH)
4027	MSB—Driver address
4028	Lines per page (67 or 43H)
4029	Line counter (0)*
402A	Unused (0)
402B	"P"
402C	"R"

Values in () are present on power-up (Level II).

Values with * change with output to device.

Even **Looks up Correct Spellings** for you!

#1

Electric Webster™

The "Cadillac" of Spelling Checkers!

80 Microcomputing, 9/82

- **SIMPLE** 1 Pass Operation
- **EASY** 1 Key Corrections
- **RATED #1** By *80 Microcomputing* Readers
- **JUDGED #1** In Review After Review

Integrates into 7 different word processing programs, (SuperScript, Scripsit, Newscript, Lazy Writer, Electric Pencil, Copy Art, Superscript) You need only press a key and in moments, Electric Webster can actually be saving, proofing, correcting and hyphenating your text—all automatically. You can view words in context, or add them to your dictionary at the stroke of a key. If you think you know the correct spelling of a word, EW will check it for you before it makes the corrections. If you don't know, EW will look up the correct spelling for you, and display the dictionary. In as little as 30 seconds, Electric Webster can return you to your Word Processing program, with your text fully corrected and on your screen.

If this sounds too good to believe, you don't need to take our word for it. Take the word of the thousands of *80 Micro* readers who voted Electric Webster the #1 spelling checker. Take the word of the scores of professional software reviewers who have raved about Electric Webster. Or, ask your local computer or software dealer for a demonstration, and see for yourself!

LOW PRICES—Add features as you need them:

Spelling Checker \$89.99 (TRS-80)/\$149.50 (CP/M)

Spelling Correction \$59.99 — includes correction,

dictionary lookup and 6 word processing integrations.

Grammatical Checking \$49.99

Hyphenation \$49.99

ACCLAIMED IN REVIEW AFTER REVIEW:

MICROPROOF (EW's predecessor):

"There is simply **no finer program** available . . ."
Creative Computing, March 1982

"This is a very useful product and should be obtained by anyone who uses a word processor." *80 Microcomputing*, August 1981

"The summary review of this program? **One word—Excellent.**"
Computronics, September 1981

AND NOW ELECTRIC WEBSTER:

My spelling book is now gathering dust. Electric Webster not only checks spelling, displays words in context and corrects errors in the text, but it will also immediately take you to the right place in a 50,000 word dictionary so you can check the correct spelling for yourself."
Info World, August 1982

"In my opinion, **the perfect combination** is Correcting Electric Webster with the hyphenation and grammar add-ons. To my surprise, it fills every reasonable expectation. It is fast, easy to use and accurate."
Desktop Computing, December 1982

"Actually, Electric Webster is faster than its predecessor (Microproof). . . and spelling corrections are immediately verified against the dictionary before being accepted. . ."
Microcomputing, September 1982

"Electric Webster is the **Cadillac of vocabulary programs**. . . If I could only have one, it would be Electric Webster.

'80 Microcomputing, September 1982

The Ultimate PROOFING SYSTEM

CORNUCOPIA SOFTWARE ✓ 45

Post Office Box 6111 Albany, California 94706 • (415) 524-8098

If bit 0 of the device is set, the device is used for input. If bit 1 is set, the device can be used for output. Bit 2 is unclear, possible uses could be: if set, to enable ability to output control byte to the driver or device or input status from them. The other bits are not used.

If you try an illegal function, ROM jumps to 4033H (Level II power-up), which usually consists of:

```
4033H LD A,0
4035H RET
```

The video is used as an input device. The device type is 07; bit 0 is set. To test this, try the following code:

```
LD DE,401DH ;Point DE to video DCB
CALL 13H ;Set input flag and jump to master I/O routine
```

The input byte will be in the A register and is the ASCII value of the character at the current cursor position on the video display.

Driver Address

The driver routine's address is stored in these 2 bytes in Z80 LSB/MSB

format, with LSB followed by MSB. Turning on Level II puts the addresses of the standard drivers here.

Driver-used Bytes

While the keyboard driver at 3E3H uses none of these bytes, the video driver at 458H uses all three of these bytes as follows: 4020H and 4021H contain the address of the cursor position in screen memory (3C00H-3FFFH), and 4022H contains the cursor character (the character on the screen before the cursor (5FH) wrote over it). If 4022H equals zero, the cursor is not on.

The printer driver at 58DH uses two of these bytes as follows: 4028H contains the number of lines per page. 4029H contains the line number currently being printed.

"A driver can be located anywhere in memory."

Using the Drivers

To use a driver, call the driver address. Since most drivers don't save registers you might be using, save them first. Be sure to tell the driver what type of action is required (input, output, or control).

There are ROM routines that make this easier. First, point DE to the DCB of the desired device and call one of the

Project 1—Flashing Cursor

Intercept the keyboard driver by putting the address of your own driver in the keyboard driver address

(4016H) in the *KI DCB (see Table 1). Whenever Basic, DOS, or any other program accesses the keyboard through 2BH, a jump is made to your driver. There you get the ad-

SUPER DIRECTORY

READS ALL

Reads any single or double density DOS except Tandy Model I double density.

SCREEN EDITOR

Almost eliminates typing with direct screen editor.

MULTIPLE SEARCH

String search any combination of letters through any field.

SORTS

Sort on any field (1000 files in 9 seconds).

INDEX

Cross index on any field instantly!

SCROLLS

Scroll 4 ways in 2 different formats.

FREE SPACE

Automatically keeps track of file names free space, date, and disc name.

REMARKS

Allows 25 character remarks on each file (can even sort and string search them).

FASTEST

Every function works instantly (except sort).

PRINTER

Custom print driver.

EASIEST

Easy! All single key commands.

requires 48k, specify Model I or II single or double density

following addresses:

● **13H-INPUT**—Saves BC RP to stack and loads B with 01. (01 is the flag that prepares the driver for input.) Remember: bit 0 is set. A jump is made to the master DCB routine (3C2H).

● **1BH-OUTPUT**—Saves BC RP to stack and loads B with 02 (02 is the flag that signals the driver for output; bit 1 is set). A jump is made to 3C2H.

● **23H-CONTROL**—Saves BC RP to stack and loads B with 04 (04 is the flag that outputs control or inputs status from the driver). Bit 2 is set and a jump is made to 3C2H.

All of these routines jump to the following one:

● **3C2H-Master DCB routine**—Registers are saved, and IX is pointed to the DCB. The C register is equal to output

byte, and device type is compared to the desired function (B register) for legality. If the function is illegal, a jump is made to 4033H. HL is pointed to the driver, and a call is made to the driver. Upon return from the driver, the register contents are restored and you are returned to the calling program.

The following routines point DE to the DCB and jump to the usual input (13H) or output (1BH) routine:

● **2BH-keyboard input**—DE is pointed to the *K1 DCB and a jump is made to the input routine (13H).

● **33H-video output**—DE is pointed to *DO DCB and a jump is made to the output routine (1BH).

● **3BH-printer output**—DE is pointed to *PR DCB and a jump is made to the output routine (1BH).

Register Set-up to Call Routines

If you use an output driver to call these routines, place the byte to be output in the A register prior to calling 1BH, 33H, or 3BH. If you call 1BH, don't forget to place the address of the desired device's DCB in the DE RP; 33H and 3BH do this for you.

If an input driver is called, the A register contains the input byte after calling 13H or 2BH. If you call 13H, place the address of the desired device's DCB in the DE RP; 2BH does this for you.

If a control byte is to be output or a status byte is to be input from the driver, place the address of the desired device's DCB in the DE RP and the control byte in the A register prior to calling 23H. The status input byte is in the A register upon return.

dress of the cursor from the *DO DCB (see Table 1), and blink it off or

on. Then jump to the old keyboard driver, the address of which is stored

at 4016H prior to your putting the address of your driver there.

Program Listing 1 Line Functions

100-170	Program ID comments.	430-460	Clear screen.
180-340	Define labels and origin.	480	Return back to Basic or DOS.
190	Delay routine in ROM; load BC with delay count and CALL 60H (AF & BC are used and equal zero on return). The code at 60H looks like:	490-620	The actual flashing cursor driver.
	60H DEC BC ;Drop delay count.	500	Load A with the cursor character from the *DO DCB.
	61H LD A,B ;Get MSB.	510	Test it for zero. Zero means there is no cursor (instead of input, printing type action is being performed).
	62H OR C ;OR with LSB.	520	If no cursor, forget about making it flash and jump to the old *K1 DVR.
	63H JR NZ,60H ;If both are not zero, do again.	530	Load HL with the address of the cursor from the *DO DCB.
	64H RET ;Return back.	540	On entry to a driver, IX points to the respective device's DCB; in this case, the *K1 DCB. So load register A with flag byte stored at 4018H in the *K1 DCB. Remember those three unused bytes? You're using one of them now as a flag byte.
230	Set MAXMEM equal to the highest RAM location in your machine:	550	Toggle flag. If A equaled zero, it now equals one, and vice versa. Z flag is set or reset depending on whether the result is zero or one, respectively.
	4K-4FFFH	560	Save the toggled flag back where you got it.
	16K-7FFFH	570	Store a graphics block at the cursor position (blink cursor on).
	32K-0BFFFH	580	If the flag equaled zero after you toggled it, skip the next instruction and leave the cursor on.
	48K-0FFFFH	590	Store a blank at the cursor position (blink cursor off).
240-290	DOS only lines.	600	Load BC with a 6-millisecond delay count.
250	This pointer protects your program from actions of DOS.	610	Delay. This slows down the blinking and provides some key debounce.
300-340	Level II Basic only lines.	620	Jump to the old *K1 DVR. Get a key and return.
310	This pointer protects your program (like "MEMORY SIZE?" does) from the actions of Basic.	630	Auto-start. This is the execution address used by DOS to jump to the start of the program when it is loaded, and by Basic as the "<ENTER>" address of the System command.
350-480	Initialize.		
360	Start of program. Save HL (used on return to DOS).		
370	Load HL with the address of the current *K1 driver.		
380	Save the old *K1 DVR's address at KBSCAN+1 so the jump instruction at that location jumps to the old DVR to return a key to the calling program.		
390	Load HL with address of new *K1 DVR.		
400	Store in the *K1 DCB's DVR address.		
410	Point HL to one less than the driver and save in the pointer to top of usable RAM (protect program).		
420			

Register Set-up at Entrance to Drivers

Register A contains the function flag: 01 for input, 02 for output, or 04 for control status. Status flags are also set as follows: C flag is set for input, Z flag is set for output, and both reset for control/status.

B also contains the function flag, and C contains the byte to be output or the control byte. HL contains the address of the driver; this is useful for making your drivers relocatable. IX contains the address of the device's DCB and DE points to the DCB.

To return the input or status byte to the calling program, place it in the A register and return. ■

Jerry Lindsly can be reached at 1175 Shular Ave., Hamilton, OH 45011.

Project 2—PRINT/LPRINT Output Directing

If you put the address of the video driver into the *PR DCB driver address, all output that normally goes to the printer is directed to the video.

Program Listing 2 lets you direct the output from PRINT or LPRINT to the video, the printer, or both at the same time.

Since this program is executed from Basic, DOS users must use an origin that is easily remembered (such as 65432) so that you can load the program in. Go to Basic, and type "SYSTEM <ENTER>", "/65432<ENTER>". Level II users can simply execute as usual; load the program in with the System command and type "<ENTER>".

Listing 2 continues

Program Listing 2 Line Functions

100-170	Program ID remarks.	230	NAME (418FH) is where control of the Basic interpreter is passed when the command "NAME" is encountered.
180-280	Define labels.	240	DODCB (401DH) is the address of the video device control block.
190	MAXMEM is used to tell the assembler where in memory to assemble the program. Set this equal to the highest free memory location in your machine: 4K-4FFFFH 16K-7FFFFH 32K-0BFFFFH 48K-0FFFFH	250	PRDCB (4025H) is the address of the printer DCB.
200	TOPMEM (40B1H) is where the pointer to the highest available RAM location is stored. Used to protect the program from Basic. This is equivalent to the answer to the "MEMORY SIZE?" question.	260	PRINT (0B2H) is the hex byte token where Basic stores the "PRINT" reserved word.
210	Basic (72H) is a re-entry point to Basic.	270	LPRINT (0AFH) is the token for the reserved word "LPRINT."
220	SNERR (1997H) is the entry point of the syntax error routine.	280	TO (0BDH) is the token for the reserved word "TO."
		290-390	Initialization.
		300	Originate machine code at MAXMEM minus 115 bytes.
		310	Execution starts here. Load HL with address of the video driver.

Table continues

Shape your TRS-80 to communicate with any computer you want.

Omniterm is the most flexible, powerful terminal program you can buy. Omniterm lets you adapt your TRS-80 to communicate with 99.9% of the world's computers. Your company's mainframe, for example. Or any other personal computer, time-sharing computer, or communications service.

Omniterm overcomes incompatibilities in screen formats, baud rates, character sets, control codes and file transfer protocols. Seven complete translation tables let you change any character, for complete compatibility of all input and output devices. Omniterm is so flexible, users have even set up their ASCII-coded systems to communicate with EBCDIC-coded systems.

You can send all ASCII characters, even those that aren't on your keyboard. Reformat your screen to neatly accommodate any line length. Run your printer while you're sending or receiving data. And even review data that's scrolled off the top of the screen.

Omniterm's well-thought-out design makes it easy to use. You can get a status display of all functions while on line to tell you what's going on, and make any changes at the same time. You can create a special file of your settings to make it easier next time. You also get X/Y cursor control, single keystroke sign-on and auto-dialing. Even a phone directory. And lots more.

You don't have to be a computer expert to use Omniterm. Just spend a day with what the reviewers call "the best manual in the business." Then if you need help, just call, write, or contact us via CompuServe, Delphi, or Source.

Omniterm is the proven terminal program. The program thousands of people have used successfully. And the one the editors call the "top program available" (Byte, BO-Micro, Infoworld, etc.)

Omniterm comes complete with sample setting files, conversion utilities, a practical text editor, seven translation tables, and a 76-page manual with index.

Available at leading dealers, or prompt shipment on direct phone and mail orders. Order Omniterm, for a super-smart TRS-80 that's putty in your hands.

Only \$95 for TRS-80 Models I or III (32K memory, one disk minimum). \$175 for Models II, 12 or 16 (64K memory minimum). (In Mass., add 5% sales tax.) MasterCard, VISA, and C.O.D.
IBM PC version coming soon.

Continued

To use the program, execute the following statement from command mode or from a Basic program:

```
NAME src TO dest
src = PRINT or LPRINT
dest = V,P, or B (V = Video, P = Printer,
B = Both)
```

Example: NAME PRINT TO B directs all output normally going to the video to both the video and printer.

If you would rather use a Basic program instead of an Assembly listing, see Program Listing 3. Before running the program, load in all other drivers that you'll need.

The program relocates the routines to just below wherever "MEMORY SIZE?" is set. "MEMORY SIZE?" is reset below these routines.

Note the thorough error-checking included in the program; not only does it tell you what kind of error (HEX Syntax or Checksum), it in-

Continues

Table continued

320	Save, so you know where the video driver is.	570	Load BC with the address of the routine to direct output to both video and printer.
330	Load HL with address of the printer driver.	580	If character is not V, P, or B, syntax error.
340	Save this, too.	590	Increment HL over V, P, or B. At this point, DE points to the DCB driver address we want to change, video or printer. BC points to the address of the driver you want output to go to: video, printer, or both.
350	Load HL with address of your routine to change the drivers.	600	Point HL to the DCB driver address to change; DE contains the next character pointer to the Basic line.
360	Save in the "NAME" command vector, so that when the NAME command is used in Basic it jumps to your routine.	610	Save LSB of the address of selected driver in the LSB of the selected driver address.
370	Point HL to highest available RAM location to Basic.	620	Point HL to MSB of the driver address.
380	Save in the "MEMORY SIZE?" pointer so Basic doesn't overwrite your routine.	630	Save MSB.
390	Jump to Basic.	640	Restore next character pointer to HL (necessary to return to Basic properly).
400-650	Routine to interpret syntax and change the drivers as selected. Upon entry to the routine, HL points to the encoded Basic line after the occurrence of the NAME command. Register A contains the first character following the NAME token.	650	Return back to Basic (continue processing Basic line and program).
410	Test to see if the character is the "PRINT" token.	660-900	The drivers.
420	If it is, you want DE pointing to the video DCB driver address.	670-700	Driver to direct output to both printer and video.
430	If it is the "PRINT" token, skip the following processing.	670	Save flags so that they are the same for both drivers.
440	Test to see if the character is the "LPRINT" token.	680	Output character to printer.
450	If it is, you want DE pointing to the printer DCB driver address.	690	Restore flags.
460	If the character is neither "PRINT" nor "LPRINT", it must be a syntax error.	700	Since video driver immediately follows, there is no need to call it.
470	RST 16 is used to increment HL over the current character in the tokenized Basic program lines; skip over spaces, line feeds, etc., and retrieve the next character to the accumulator. The character is also tested for numeric. C is set if the character is in the range ASCII 0 (30H) to 9 (39H).	710-720	Video driver.
480	RST 18 makes a syntax check. If the next character (pointed to by HL) doesn't equal the byte following the RST 8 opcode, a jump is made to the syntax error routine (1997H). In this case, you want the next character to be the "TO" token.	710	Point IX to video DCB. At entrance to a driver, IX is assumed to point to the DCB of that device. If, however, output is directed from the *PR DCB to the video driver, IX points to the *PR DCB, not the *DO DCB, as it should. This code corrects that.
490	"TO" token used with RST 8 above.	720	Jump to the video driver. At initialization, the address of the actual *DO DVR was stored here at DODVR + 1.
500	Test for V.	730-900	Printer driver.
510	Load BC with the address of the video driver (stored earlier).	730	Save flags.
520	If V, skip over the following process so output goes to the video.	740-750	Transfer IX to HL.
530	Test for P.	760	Get LSB.
540	Load BC with the address of the printer driver.	770	Test to see if output came from *PR DCB (4025H); if so, IX points to it. Otherwise, IX points to *DO DCB (401DH).
550	If P, skip over the following process so output goes to the printer.	780	If output came from *PR DCB, skip the following filter code:
560	Test for B.	790-870	Filter code. Output coming from video DCB to the printer DVR may contain unneeded control codes. This code filters out all but carriage returns and line feeds.
		880	Restore flags.
		890	Point IX to printer DCB for same reasons IX is pointed to *DO DCB in line 710.
		900	Jump to the printer driver. At initialization, the address of the actual printer driver is stored here at PRDVR + 1.
		910	End of program; execution address.

PROGRAMMING TOOLS FOR YOUR TRS-80™ MODEL I AND MODEL III

INSTANT ASSEMBLER

New Version!

The **INSTANT ASSEMBLER** is a powerful assembly language development system for the TRS-80, and our new version is better than ever. If you are already an assembly language programmer, its unique design will greatly increase your productivity. If you are just getting started, there is no better assembler to help you learn machine language programming. Some of its unique features are immediate assembly, which detects syntax errors as source is entered, and a compact source format that allows you to write programs nearly three times as large as other assemblers in the same amount of memory. It produces relocatable code modules that can be saved on disk or tape and linked together in memory for large or modular assemblies. It will also assemble to disk, tape, or directly to memory for immediate debugging with the built-in debugger. You can quickly switch from assembler to debugger without losing your source. The built-in debugger will step through your programs one instruction at a time, showing each disassembled instruction and its effect on the registers and memory. It can even use the symbols in your source code when stepping or disassembling. Our new version will load or save both conventional source files and its own condensed source format.

The **INSTANT ASSEMBLER** package includes six separate programs. The assembler itself includes the editor and built-in debugger. The **LINKING LOADER** is included in several versions for different memory sizes. A stand-alone version of the debugger (**MICROMIND**) is also included. **MICROMIND** can be relocated in memory and has commands to single-step, set breakpoints, display or alter registers or memory, find bytes or words, disassemble to screen or printer, convert between hex and decimal numbers, and write **SYSTEM** tapes. The **INSTANT ASSEMBLER** comes with a comprehensive 65 page instruction manual with many examples.

Specify Model I or Model III. **TAPE INTASM 2.1** \$39.95 on tape
Specify Model I or Model III. **DISK INTASM 2.1** \$49.95 on disk

INSIDE LEVEL II

The Programmers Guide to the TRS-80 ROMs

INSIDE LEVEL II is a comprehensive reference guide to the Model I and Model III ROMs which allows the machine language or Basic programmer to easily utilize the sophisticated routines they contain. Concisely explains set-ups, calling sequences, and variable passage for number conversion, arithmetic operations, and mathematical functions, as well as keyboard, tape, and video routines. Part II presents an entirely new composite program structure which loads under the **SYSTEM** command and executes in both Basic and machine code with the speed and efficiency of a compiler. In addition, the 18 chapters include a large body of other information useful to the programmer including tape formats, RAM usage, relocation of Basic programs, USR call expansion, creating **SYSTEM** tapes of your own programs, interfacing of Basic variables directly with machine code, and special precautions for disk systems. **INSIDE LEVEL II** was reviewed in the April 1982 issue of 80 Micro which said "The book has no flaws; it is a perfect gem." Byte Magazine said "I recommend this book to serious machine language programmers."

Includes updates for Model III. **INSIDE LEVEL II** \$15.95

SINGLE STEP THROUGH RAM OR ROM

STEP80 allows you to step through any machine language program one instruction at a time, and see the address, hexadecimal value, Zilog mnemonic, register contents, and step count for each instruction. The top 14 lines of the video screen are left unaltered so that the "target program" may perform its display functions unobstructed. **STEP80** will follow program flow right into the ROMs, and is an invaluable aid in learning how the ROM routines function. Commands include step (trace), disassemble, run in step mode at variable step rate, display or alter memory or CPU registers, jump to memory location, execute a **CALL**, set breakpoints in RAM or ROM, write **SYSTEM** tapes, and relocate to any page in RAM. The display may also be routed to your line printer through the device control block so custom print drivers are automatically supported.

Specify Model I or Model III. **STEP80** \$16.95 on tape, \$21.95 on disk

DUPLICATE SYSTEM TAPES WITH CLONE

Make duplicate copies of almost any tape including Basic, **SYSTEM**, data lists, assembler source, or "custom loaders". The file name, load address, entry point, and every byte (in ASCII format) are displayed on the video screen. Model III version allows changing tape speed so you can make 1500 baud copies of 500 baud programs like **SCRIPSI**.

Specify Model I or Model III. **CLONE** \$16.95 on tape, \$21.95 on disk

RESTORE DAMAGED TAPES WITH RESQ2

RESQ2 will repair cassette tapes that can no longer be loaded because of "crashed" data. It can restore **BASIC**, **SYSTEM**, **ASSEMBLER**, and **DATA** tapes. **RESQ2** compares two copies of the damaged tape to attempt a restoration, though restoration can often be accomplished with only one copy. After the damaged data is corrected in memory, a new tape may be recorded and verified which does not contain any errors. The success rate of **RESQ2** will depend on the severity and quantity of errors. **RESQ2** comes with a comprehensive user manual and examples of two types of "crashed" programs to practice on.

Specify Model I or Model III. **RESQ2** \$19.95 on tape

DISK INDEX VERSION 3

Our excellent disk indexing program has now been entirely rewritten in machine language. **DISK INDEX** will assemble a master index of your entire program library by automatically reading the program names and free space from each disk. The index may then be alphabetized or searched for any disk, program, or extension. It will alphabetize 2400 programs in less than 50 seconds and will find any program out of 2400 in less than 3 seconds. Disks or programs may be added or deleted manually, and the whole index or any selected part may be printed on paper in several different formats. The index itself may also be stored on disk for future access and update. A 48K machine will hold up to 255 disks and over 2400 programs in each index, and you may build as many indexes as you need. There is no limit to the number of filenames it can read on any one disk. It will run on either a Model I or Model III and catalog disks for either machine regardless of which one is running it, though Model I owners must have double density to catalog Model III disks. It will automatically recognize any DOS and disk density. **DISK INDEX** works with any operating system written for the Model I or Model III except CP/M, and is extremely fast and easy to use.

Specify Model I or Model III. **DISK INDEX VERSION 3** \$29.95 on disk

TELCOM II

Our popular smart terminal program has just gotten a lot smarter. After two years of experience with **TELCOM** and many requests from customers, we have created **TELCOM II** for the most demanding telecommunications applications. **TELCOM II** maintains the same ease of operation and all the features of our original program (see below), and includes many enhancements. The terminal mode now has a help menu, a large spooler for simultaneous printer output at high baud rates, acknowledges receipt of all commands, and displays control characters. You can now load disk files into the memory buffer from within the terminal mode, transmit the buffer with a single command, and send files a line at a time. You can even view the buffer or data that has already scrolled off the screen. **TELCOM II** has 10 different 40 character programmable messages that can each be sent with a single command, and the messages can now include control codes and delays. It also has 5 different character translation tables for compatibility with different systems. One of the most substantial additions to **TELCOM** is a full protocol file transfer mode which is compatible with the **LYNC** program available on CP/M systems and the IBM PC. **TELCOM II** will exchange disk files with any computer running this protocol (including another TRS-80 running **TELCOM II**), and will automatically correct errors in transmission! Files can be sent to or latched from an unattended computer with ZERO errors. The extreme ease of use **TELCOM** is known for has not been compromised. Reconfiguration of the programmable features is done internally from clear menus for fast, easy operation. **TELCOM II** comes with a comprehensive instruction manual which is available separately for \$5 (which will apply to subsequent purchase of the program). You won't find a smarter or easier to use terminal program at any price.

Specify Model I or Model III. **TELCOM II** \$69.95 on disk

TELCOM I

Our original and popular smart terminal program has most of the features needed to communicate with time share systems or for high speed file transfers between two disk-based micros over modems or direct wire. It is menu driven and extremely simple to use. Functions include terminal mode, save RAM buffer on disk, transmit a disk file, receive a disk file, examine and modify UART parameters, 8 programmable log-on messages, automatic checksum verification of accurate transmission and reception, and many more user conveniences. Supports line printers, lowercase characters, Xon/Xoff protocol, programmable character keys, and even saves itself on disk in different configurations. It will also exchange binary files without conversion to ASCII.

Specify Model I or Model III. **TELCOM I** \$39.95 on disk

RAM SPOOLER AND PRINT FORMATTER

This program is a full feature print formatting package featuring user definable line and page length (with line feeds inserted between words or after punctuation), indentation, screen dump, and printer pause. In addition, printing is done from a 4K expandable buffer area so that the **LPRINT** or **LLIST** command returns control to the user while printing is being done. Works with cassette or disk systems. Allows printing and processing to run concurrently. Output may be directed to either the parallel port, serial port, or the video screen. 80 Micro said "I can only give my highest recommendation of Spooler and Mumford Micro Systems."

Specify Model I or Model III. **SPOOLER** \$16.95 on tape, \$21.95 on disk

4 SPEEDS FOR YOUR MODEL I

The SK-2 clock modification allows CPU speeds to be switched between normal, an increase of 50%, or a 50% reduction; selectable at any time without interrupting execution or crashing the program. Instructions are also given for a 100% increase to 3.54 MHz. The SK-2 may be configured by the user to change speed with a toggle switch or on software command. It will automatically return to normal speed any time a disk is active, requires no change to the operating system, and has provisions for adding an LED to indicate when the computer is not at normal speed. It mounts inside the keyboard unit with only 4 necessary connections for the switch option (switch not included), and is easily removed if the computer ever needs service. The SK-2 comes fully assembled with socketed IC's and illustrated instructions.

Model I only. **SK-2** \$24.95

ORDERING: Complete satisfaction is guaranteed or a full refund will be made. Include \$2.00 for postage and handling. Call into weekdays 8:00 AM to 5:00 PM. Visa, MasterCard, and C.O.D. orders accepted. SPECIFY MODEL I OR MODEL III. Dealer inquiries invited.

Box 400-E Summerland, California 93067 (805) 969-4557

Quality software since 1976

dicates in what data line the error occurred. This is accomplished by PEEKing a pointer in reserved RAM; this pointer is constantly updated by Basic and contains the line number of the last read data item. HEX Syntax error refers to an invalid hex character (those other than 0-9 or A-F). The last hex byte in each data line is the checksum for that line. If you get either error, compare the line to the listing.

Now you are familiar with DCBs and drivers. Experiment with what you have learned. Some information on using DOS-reserved words and syntax can also be picked up by studying Program Listing 2. ■

TWO NEW WAR GAMES!

CRUSADERS

(I/III Disk \$24.95 Tape \$19.95)

The scenario is that you are the King of Jerusalem and have to rule your Kingdom from 1169 to 1177. Your ultimate aim is to prevent any incursions by the invading Saracens. You have a total of forty-eight fortresses, all interconnected by caravan routes. The program will pick these off one by one, unless you can defeat the Saracen army in the field, by gathering together an army for yourself from the various garrisons.

Each year consists of six (bi-monthly) moves. At the end of each year (at play rating 6), you will find a new Saracen army moves into the Kingdom from enemy territory. All Saracen armies that stay in the field for a year are reduced by desertions.

The program itself has an artificial intelligence, in as much as the Saracens attempt to siege and take castles and fortresses that they have not previously moved to. In this way a Saracen army that has been sieging for a few years may be reinforced by a new army, which may be sufficient troops to affect the taking of the fortress.

However, your troubles do not stop there! You have to provide food for garrisons and your assembling army. If you find a garrison is under siege, the only way to give them food is to send a caravan, which costs money!

The program is menu-orientated and a map is supplied for both the Northern area and the Southern. The graphics are good, and both Crusader lines and Saracen lines are also displayed, again with an appropriate map. The caravans, of course, are used to transport food from town to town and when this option in the menu is selected then the 5 available caravans are displayed on the screen. You then have four options, to attach or detach food or horses, and to raise or move caravans.

EMPEROR

(Mod I/III Disk \$24.95 Tape \$19.95)

Occasionally a game comes along which is of such immensity that it is almost impossible to describe. Such a game is "Emperor". It is entirely a game of strategy, played on a graphic map of the Roman Empire as it was in the first four centuries A.D. The player takes the part of the Emperor and he must pit his wits and forces against invading barbarians, rebellious provincials and treacherous Roman Generals. Even the Plebs of Rome will have to be placated with bread and circuses if the Emperor is to keep his head and throne. If he can last out for the first eight years of the game, he is judged on the state of the Empire at the end of that time. There are three levels of play. Depending upon his choice, the Emperor has to guide the Empire through the first, third and fourth centuries. To win in the first century he must expand the Empire by two provinces, in the third he must maintain his Empire intact and in the fourth he must lose not more than two Provinces. For each Province the player is given three items of information, the number of loyal Legions, the number of revolting Legions and the number of Barbarian Invaders or Local Rebels. During play Legions must be raised, taxes inflicted and troops moved. The choice of Generals can be very critical—some are loyal and good fighters, some are neither. Battles must be fought and invasions repelled. All the while the citizens in Rome must be kept happy and—you must keep an eye on those Barbarians in Britannia!

NEW FLIGHT SIMULATOR!

JUMBO

(I/III Disk or Tape \$29.95)

You're in the cockpit of a jumbo 747, preparing for a spectacular flight! You are the one and only pilot, which means that all controls will be in your hands. You must first plot a course to a variety of places around the globe. Now prepare for takeoff, watch the array of dials and meters that line your control panel, only you, an experienced pilot can understand and react accordingly. As you feel the plane ease into the air, be prepared for anything! Keep your eyes on the airspeed, but also keep the plane level, watch all indicator lights while making the ride as smooth as possible. As you approach your destination, the automatic pilot kicks off and you must prepare for landing. You release the landing gear, level the plane, and go into final approach. Keep your nose up, and once you hit the ground, drop your flaps and hit the air brakes! You've done it! You've piloted your first successful mission, congratulations! Where will you fly to next?

CUT 11

Apple Core Emulator

by Gary Grout

Now Model I and Model III users can have the best of both worlds. With this emulator, your TRS-80 writes and runs Apple II software.

The heart of the Apple II computer is the 6502 microprocessor. The Apple's popularity can be attributed to its simple program and interface requirements and is manifest by the wide variety of available software.

TRS-80 owners who want to access some of that software don't have to spend \$1,500 to buy an Apple. A less expensive solution is the Apple II emulator program provided here.

An emulator is a software program that mimics the way a particular piece of hardware (like a microprocessor) operates. It performs the same functions

and produces the same results as that hardware.

I call my 6502 emulator the Apple Core Emulator. Not only can it run Apple-compatible programs, it creates them as well. The emulator converts Assembly-language code for the TRS-80 Z80 microprocessor into 6502 machine code.

Since emulation is by nature slow, there are limitations to the emulator's processing speed. It takes several Z80 instructions to duplicate a single 6502 instruction, so it's doubtful that anyone would write a commercial machine-code program for the 6502 to run on a

Z80. But you can produce 6502 code with a TRS-80 that runs on a 6502 microprocessor.

Going to the Code

The Apple Core Emulator interprets 6502 code one instruction at a time and substitutes Z80 routines for each.

The 6502 register structure and its addressing modes are quite different from those of the Z80. The Z80 has 14 registers, eight of which make up a rarely used alternate register set. The emulator uses this alternate register set to keep track of 6502 code.

The 6502 has only three 8-bit registers, a stack pointer, program counter, and flag register. The working registers are named A, X, and Y. The program counter is referred to as PC, the stack as S, and the flag register as P (for phlag).

Although the 6502 has fewer registers, it's more versatile. Microprocessors use addressing modes to access main memory or other registers. One difference between the 6502 and the Z80 is that the 6502 uses paging to address memory: it handles memory in 256-byte blocks called pages. The 6502 has a zero page, the first 256 bytes of memory, called frequently when using the different addressing modes.

The Key Box

Model I and III
32K RAM
Assembly Language
Editor/Assembler

The 6502's nine different addressing modes let you manipulate data in many different ways. The nine modes are: immediate, absolute, direct, relative, indexed, pre-indexed, post-indexed, indirect, and implied.

Coming to Terms

Explaining the addressing modes is difficult. My analogy of a train delivering freight should help you understand each mode.

Consider the CPU as a train traveling down a track. The track represents a program with each railroad tie a byte. The program is a continuous track of memory from byte zero to FFFFH. The engine is a program counter. It travels down the line passing each instruction byte in a sequence determined by the track. The train cars are registers A, X, Y, and P. They are loaded and unloaded as they progress through the program.

Loading and unloading train cars is analogous to using the CPU addressing modes. The program instructions or opcodes (ties) encountered by the program counter (engine) one at a time determine what is loaded, how it is loaded, and which register (car) to load.

*"Consider the CPU
as a
train traveling
down a track."*

The following descriptions of the addressing modes provide a technical explanation, an example instruction, and an explanation using the train analogy.

In the implied mode, the opcode contains the names of the registers it will use. A mnemonic example is TXA. This instruction transfers the contents of the X register to the contents of the A register.

On the railroad, the program counter engine passes over the instruction on the track. TXA names the cars to load and unload; it tells the train to move the cargo from car X to car A.

Immediate addressing uses the next

COMPUTER SHACK

LIBERATOR by John Crane

Adventure, excitement, action, danger and even beautiful girls! Liberators got it all! This fantastic arcade game will get your heart pumpin' and your mind moving!

With your eyes glued to the screen and your fingers wrapped around the controls, move cautiously through the treacherous industrial park on a most dangerous mission. You must locate and rescue four lovely young girls from their monstrous capture. Ahh, but there's a catch! They've been captured by a 2000 pound, seven foot tall, mechanical robot gone mad. Sound easy? Just wait until you see the surprises we've got in store for you! 1982's most popular arcade game, Donkey Kong, comes to life on your TRS-80 screen through the magic of John Cranes LIBERATOR! And if you thought Donkey Kong was fun, wait until you experience LIBERATOR's five separate screens (more than the arcade version) each utilizing the best sound and graphics possible!

CLASH By Bill Dunlevy

Once again, one of the markets most creative programmers, creator of Assault, Jovian, and the ever famous Cyborg, brings to the industry another smash hit! Yes, Bill Dunlevy has created CLASH, a fantastic new arcade simulation!

Mounted upon your great white winged stallion, prepare yourself for a clash within the arena. This day, you will be competing against famous riders from all over the planet. As the tournament begins, there is a frenzy of flapping wings and bucking horses, but finally all riders are airborne and the contest has begun. With a firm grasp on the reins, maneuver your horse above the others and then descend upon them. You must dismount the other riders, before their skill prevails and they dismount you.

Be warned, CLASH is for those riders of skill and reactions! Even one second of carelessness can prove fatal. But for those who love a challenge and an adventure, CLASH, with its multi-levels of play, will definitely become a favorite! Model I/II

Tape.....\$19.95 Disk.....\$24.95

DIG OUT by John Crane

Uh oh! The wackiest game to ever hit an arcade is now invading your computer! Dig Out, that crazy game of dirt and rock will turn your reactions inside out.

As the game begins, you'll find yourself amidst tons of rock and earth. You must dig your way through the surrounding tunnels and hunt down the deadly monsters. But watch out!!! As the hunter, you might just become the hunted. The monsters are strangely powerful, their touch can destroy and their eggs can obliterate. Besides all this, the underground is their natural habitat. With a mere thought, they can move through tons of rock and appear before you. So, you better be quick and your reactions better be good!!!

DIG-OUT is truly another COMPUTER SHACK classic. In each of its fifteen different levels, DIG-OUT combines the best sound, fantastic graphics, and above all, exciting action for a game that surpasses even the original. Model I/III

Tape.....\$19.95 Disk.....\$21.95

ASSAULT by Dunlevy & Froyer

Strap yourself into the dimly lit ATV (All Terrain Transport), check the motor, the laser's, and visibility. Now prepare yourself for an underground trip that you won't soon forget... If you live! After weeks of exploring and mining, you've accumulated quite a tidy sum of gold. But just as you thought the adventure to be over, you stumble upon a part of the mountain that is soon to become your battle ground, if not your grave. These wide open caverns are inhabited by strange creatures set upon stealing your gold and maybe even your life. You can battle them in your laser equipped ATV, but beware! Along the walls grow rather harmless looking mushrooms, that is until you've touched one. But all of this is child's play compared to battling NODRID, the emperor spider of this hellish place. His bloodthirsty fangs will make short work of any unwary adventurer, but you will not find him such an easy prey! Model I/III

byte the program counter points to as data. For example, LDX 2 is an instruction that loads the X register with 2.

As the PC (program counter) engine passes over an immediate instruction, the engineer is informed that the next number he comes upon is something to be loaded onto or unloaded from the train. As the program counter travels over LDX of the example, it is told that the next number (2) should be picked up and placed in the X car.

Absolute addressing uses the next 2 bytes the program counter points to as an address for data in memory. STY \$FE00 is a store opcode that stores the Y register at location FE00H.

As the engine travels over an absolute instruction, the engineer is informed that the next two numbers on the track specify the station where cargo can be picked up or left. As the PC engine encounters the absolute STY instruction, it takes the next 2 bytes on the track (FE00H) as the name of the station where car Y is to be unloaded.

Direct addressing uses the byte encountered by the program counter as an address for a byte in the first page (256 bytes) of memory. This is referred to as zero page addressing; the data is a byte

in zero page. The STY 2 instruction stores the contents of the Y register in the zero page location 0002H.

As the train comes upon a direct instruction, the engineer learns that the next byte is the number of a warehouse at Central Station (page zero) where he is to transfer cargo. In this instance, the cargo is moved from car Y to warehouse 2 in Central Station.

*"Indexed addressing
uses a base address
and adds the value
in the X or Y register."*

Relative addressing uses the next byte ahead of the program counter as an offset added to the program counter, and makes the program branch to some other point of execution.

If the zero flag is set, BEQ 12, the

Branch Equal instruction, adds 12 to the data in the program counter. This instruction branches 128 bytes back or 127 bytes forward.

The instruction tells the engineer that a switch may have been thrown and that the distance to the new destination is the next number under the engine. The instruction, BEQ 12, says that if the flag car contains an equals sign, then it should take the next siding and rejoin the main line 12 bytes down the track.

Indexed addressing uses a base address and adds the value in the X or Y register to it.

The instruction LDA \$3C08,X adds the value in the X register to 3C08H and uses the result as the address of a data byte to be loaded into the A register.

When the train encounters an indexed instruction, the engineer is told the next station at which he is to stop. He is also informed that either the X or Y car has information as to which warehouse to use for transfer. With LDA \$3C08,X, the train stops at station 3C08H and adds the number in X to 3C08H. It then takes the resulting warehouse number, goes there, and then loads that cargo into car A.

Pre-indexed addressing adds the X

StarLogic Announces Savings on Tandy Compatible Disk Drives

register to the next byte in the program. The result is used to point to a 2-byte address in the zero page which then points somewhere else.

CMP (05,X) is the compare operation. It adds the value in X to 0005H, goes to that location in zero page, retrieves the address stored there, and uses it to fetch a data byte from memory to compare with register A.

At this point, the train analogy begins to read like a spy novel.

The engineer receives a message that the next byte the train passes over is the first half of a warehouse number at Central Station (zero page). The second half of the number is in the X car. The two numbers must be added together to get the complete warehouse number. In this warehouse is a note telling the real location of the cargo. In this example, the data in 0005H is added to the cargo number in the X car, resulting in a warehouse number. That warehouse is opened and the shipment address is found. The material at the shipping address is compared to the contents of car A.

Post-indexed addressing takes the next byte in the program as an address in zero page. It uses 2 bytes located there plus the contents of the Y register as a pointer to some other location in memory.

The STA (05),Y instruction adds Y to the 2-byte address in zero page locations 5 and 6. The result is used as the address for storing the data byte in A register.

The engineer receives the message that the next byte is a warehouse number in Central Station. A note in the warehouse holds an address that, when added to the number in the Y car, tells where the shipment is stored. In the example, warehouse 5 is opened and the number in car Y is added to the address. This gives the location of the warehouse in which to store the contents of car A.

The indirect mode uses the next 2 bytes of the program to point to some other locations. JMP (\$4035), the Jump instruction, takes an address from location 4035H and jumps to it.

The engineer receives word that the location of the next shipment is waiting at the next station, 4035H. There he gets a note specifying another location and proceeds there.

Instruction Sets on a Parallel Track

To compare the Z80 and 6502 instruction set, examine Fig. 1. Notice that, although the mnemonics are different, many of the 6502 instructions parallel the Z80 instruction set. All but three 6502 instructions have a corresponding Z80 instruction. The three

What do people who've used the NEW amber or green replacement CRT's say about them?

"If you use your TRS-80 frequently or for extended periods at a single sitting, the improved viewing comfort and health features of these replacement CRT's are very much worth the price."

80 Microcomputing Review

"Over the past few months, I have been noticing your ads appearing in 80 Micro, 80 US, and just recently, a plug for your monitor was mentioned in our favor in the LDOS Quarterly Newsletter. ... (then) after speaking to a friend of mine, who just installed a tube in his Model 1 a few days earlier, and who raved about it the whole time we were on the phone, I decided to order one... Total installation time was 27 minutes, which included a 15-minute, disruptive phone call in between, so total net installation time was about 12 minutes.

"After everything was back together, I then powered up the computer and monitor; it was beautiful to see a soft-green, anti-glare display after using a piece of glare-type plastic all these years.

"I think the slow decay rate adds class to most of the games; it seems to give them a 3D effect... After a few minutes of getting used to the tube, you do not want to go back to the old one...

"I only praise items I consider to be exceptional, and this was one of them."

Mort Schuchman
Baltimore, Maryland

From unsolicited letters of testimonial, reprinted with permission.

different instructions are Break, Return from Interrupt, and No Operation. The similarity in instruction sets is encouraging to the Z80 programmer learning about the 6502. The major task, however, is to gain an understanding of how the nine addressing modes come into play while using these instructions.

I said earlier that the emulator uses the Z80's alternate register set to simulate most of the working registers of the 6502.

In Fig. 2 the accumulator and flag register of the 6502 are emulated by the AF' (AF prime) Z80 registers. The 6502's Y and X registers use the Z80 B' and C', respectively. The Z80 HL' acts as the 6502 stack pointer, and the Z80 IX performs the duties of the program counter.

Any reference to zero page is automatically directed to that section of memory. The index register IX is also initialized to point to 6E00H and need not be altered by the operator.

Another difference between the 6502 and the Z80 is in the flag bit positioning. Viewed from Debug, the normal 6502 flag register would appear as:

	N	V	*	B	D	I	Z	C
	7	6	5	4	3	2	1	0 bit
N	Negative						1 = neg	
V	Overflow						1 = true	
*	Not used							
B	Break						break command	
D	Decimal Mode						1 = true	
I	Interrupt						1 = disable	
Z	Zero						1 = result zero	
C	Carry						1 = true	

The Z80 flags are:

	S	Z	*	H	*	V	N	C
	7	6	5	4	3	2	1	0 bit
S	Sign							
Z	Zero							
*	Not used							
H	Half carry							
V	Overflow							
N	Add/subtract							
C	Carry							

The emulator preserves the Z80 bit order to prevent errors in interpreting the flags. The decimal flag is not displayed although the decimal mode of the 6502 is simulated. Break and interrupt are not used since the emulator is only suited for applications where breaking and interrupting the program are not needed. Other differences, such as the clearing and setting of the carry

during addition and subtraction, are handled by the instruction subroutines.

The algorithm to perform 6502 code on the Z80 begins with an instruction to fetch the first 6502 operation code. This instruction is compared with a table for a match. This table holds all the addresses for the Z80 routines that simulate 6502 instructions. It consists of an instruction set opcode byte followed by the starting address of the routine to simulate the instruction.

When a 6502 instruction is matched to the Z80 routine, the program branches to that routine and the instruction is executed. The program then checks for single stepping or a break point. If these conditions don't exist, the second instruction is performed.

The subroutines that simulate the addressing modes of the 6502 are commonly used by all instructions. These addressing routines are found on lines 100-880 in the emulator. (See the Program Listing.) The subroutines that perform an instruction begin with line 880 and end with 7250.

The opcode labels are essentially the names of each instruction with a number before the last letter. An ADC instruction is labeled in the listing as AD1C. Labels that provide loops or location jump addresses are named some form of Go, Down, or Here, usually with a number.

The master routine that calls all other subroutines, searches tables, and checks for single stepping and break points falls on lines 10330-10720. From "Start," on line 10350, to "Loop," on line 10400, the HL register is saved, the next program instruction is fetched, and the address of the instruction table is loaded into HL.

The table search is performed from lines 10400-10500. From lines 10500-10570, the address of the subroutine that simulates the instruction is loaded into the 2 memory bytes behind the byte labeled "Inst." When Inst is read, the program counter calls the subroutine and then restores HL to check for single stepping. If no single stepping is required, IX is compared to HL for a break point and the program branches based on the result of that comparison.

Running Two at a Time

The Apple Core Emulator is run while in Debug. To begin the program, load the emulator with the DOS command Load and then enter Debug. Set the PC (program counter) register to the beginning of the emulating program (8000H). Load HL with a break-

Modular Software Associates introduces . . .

NEWBASIC 2.0

If you program in BASIC,
You can't afford to be without NEWBASIC.

Disk BASIC enhancement for your TRS-80 Model I/III

Customize Newbasic

Let's face it. You won't always need every command available with NEWBASIC. That's why we provide the CREATOR program. CREATOR allows you to quickly and easily create a NEWBASIC/CMD module containing only those commands you wish to use, thereby saving memory. There is no limit to the number of NEWBASIC modules you can create, with any combination of commands you desire. CREATOR offers total flexibility combined with ease of use.

Spooler/Despooler

We've seen prices of spooler/despools as high as \$100! We don't agree with this type of pricing philosophy. To prove it, NEWBASIC includes 3 commands to allow true, disk-based spooling and despooling from BASIC. The SPOOLON and SPOOLOFF commands are used to start and stop the spooling of printer output to a disk file. The DESPOOL command provides background (interrupt-driven) despooling of a previously spooled print file.

Graphics Commands Galore

Vector graphics, scaling, rotation, circles, ellipses, arcs, lines, boxes, solids . . . We don't know of any package available for the standard TRS-80 Model I/III that offers the wide variety and fantastic power of our graphics commands. With commands like CIRCLE, DRAW, LINE, PAINT, and PLOT you can easily draw any shape or figure possible on the TRS-80. Fast. And if it's not fast enough for you, TWO types of GET/PUT commands are included for incredible BASIC animation.

- **Customize NEWBASIC—include only those commands you need.**
- **Disk-based Spooler/Despooler.**
- **Tremendously powerful graphics commands.**
- **38 pre-defined keys AND 10 user-defineable keys.**
- **Sound generation and RS-232 commands.**
- **Programming tools for editing and debugging.**
- **Line-labeling, memory move, string execution, DATA restore, and much, much more.**
- **50+ page user's manual with scores of examples.**
- **Compatible with most major DOS's for TRS-80 Models I & III.**

Pre-Defined & User-Defineable Keys

With QUICKKEY, two keystrokes can give you any one of 38 pre-defined BASIC keywords. DEFKEY allows you to define any 10 keys to be any string you'd like, up to a total of 220 characters for the 10 keys. You can also save the defined keys to disk, or load them in from disk, even under program control.

Sound Generation & RS-232 Control

Now your TRS-80 can produce **sound effects** from BASIC. All you need is a small speaker attached to the cassette cable, the SOUND command, and imagination. For more serious applications, commands for RS-232 initialization and input/output are provided. You can even write a **terminal program** in NEWBASIC!

Programming Tools

The LOC. command locates succeeding instances of a given string or BASIC token. It is an invaluable aid when editing a large program. A new trace command is provided which lists the line being executed, as well as the current value of any variable(s) you select. A calculator-like command is available which displays the answer in 5 different representations, including hex, ASCII, and lsb,msb.

Other Features

Restore the DATA pointer to any DATA statement. Execute a string as a BASIC program statement. Call assembly routines without using DEFUSR. Reference lines by label or the value of a variable. Block move memory to scroll the screen right or left, or copy an array to another array —FAST! All this and much more is possible and easy to do with NEWBASIC.

Documentation

We don't skimp. You'll receive a thorough, quality user's manual with plenty of examples. You'll also get a handy reference card with a command summary. And several sample programs which demonstrate the power and simplicity of NEWBASIC.

Compatibility

NEWBASIC runs on a 48K RAM, 2+ disk-drive, TRS-80 Model I/III computer. NEWBASIC is compatible with most major DOS's, including DOSPLUS, LDOS, NEWDOS, and TRSDOS. It loads in low memory, below BASIC programs, so it does not disturb any high memory routines you may use.

Who Are We?

MSA was formed in 1980, but you probably haven't heard of us unless you own an LNWB0 computer (we wrote LNWB's enhanced disk BASIC). Our goal is to offer computer users outstanding software value for their money. We feel NEWBASIC is an excellent realization of this goal.

Pricing and Ordering:

NEWBASIC Version 2.0 is \$39.95 + \$2.50 shipping (foreign orders + \$5.00 shipping, US funds only). (California residents please add sales tax). Both Model I & III versions are supplied on the same diskette. To order, send check, money order, or credit card (Visa, M/C) information to:

MODULAR SOFTWARE ASSOCIATES
209 18th Street
Huntington Beach, CA 92648

Please allow 2 weeks delay for personal checks. Credit card orders may be phoned in by calling (714) 960-6668 (weekdays, 8 a.m. - 5 p.m. PST).

Trademarks: TRS-80, TRSDOS (Tandy Corp); NEWDOS (Apparat Inc.); DOSPLUS (Micro-Systems Software); LDOS (Logical Systems Inc.); LNWB0 (LNW Research Corp)

58

point address of the 6502 code or, if single stepping is desired, with 0000. Initialize the HL register to 6FFFH for the 6502 stack.

To run a 6502 program, load the starting address of the 6502 program into the IX register. To single step through the 6502 program execution, load HL with 0000 and press the C key twice for every instruction you wish to execute. To run the program in its entirety, load the address of the program's end into the HL register and type C. The emulator program returns when that address is reached.

Notes on Debug

The Debug utility that accompanies NEWDOS80 lets you clear the screen before you execute the machine code by pressing clear prior to typing the G command. TRSDOS Debug for the Model I does not support that feature, but it can be simulated by inserting the following line into the Assembly listing. The line should be numbered 10325 and labeled Begin.

```
CD C9 01 10325 BEGIN CALL 01C9H
;CLEARS SCREEN
```

Delete the Begin label from line 10330. Then press C three times to execute a single 6502 instruction. When single-stepping, press the C key once to clear the screen, once to execute the code, and once to return to the beginning of the emulator.

In the Model I Debug, you can alter Debug while it is in memory; Model III users can't. Because of this, you can rename the alternate registers to match

ARE YOU A DREAMER? IMAGINE THIS . . .

You place your order and it arrives when expected. "What do you know, they did ship that day!" You open your package and SURPRISE, it's what you ordered, not last year's version six times removed. "Wait a minute, I must have paid full retail to get this kind of service. H'mm, that's not it. These prices are among the lowest. What's the catch? I've got it! They charged me large shipping and handling charges. No, not that either. It says here 'Free shipping within the Continental 48 States via UPS ground.' Only the differential is charged for UPS Blue or 1st Class. Now I've got it, it's only a dream!!!"

At Micro Images your dreams become reality! How do we do it? Simple, we tell the truth. If the item you order is not in stock — we tell you. If we can't ship that day — we tell you. Which version? We tell you. Why are we telling you this? The answer is easy. This is what we do best and what separates us from the competition, AND WE WANT YOU TO KNOW.

THE COMPUTER CONNECTION

Specials for You!

SOFTWARE

New Interactive Computing Environment

Will integrate all your programs, utilities, spread sheets, word processor, business applications, games
... into one efficient user friendly system!

INTERACTIVE CONTROL and PROGRAMMING LANGUAGE (ICPL) \$150.00

The heart of the whole system! This flexible approach allows you to create a configuration that best fits your needs. You can execute ICPL commands directly from a BASIC PROGRAM. Ideal for development of serious applications.

MENU FACILITY

(Comes at no charge with screen management.) Simple to use yet unbelievably powerful. Create your own menus in a matter of minutes and link them together.

SCREEN MANAGEMENT FACILITY \$75.00

The most flexible screen management facility ever written for the micro: Programmable function keys Easy definition Screens can be produced with any word processor.

DATABASE FACILITY \$75.00

Unlimited number of files, each file of up to 255 fields of 64 characters each. Unlimited number of keys — every field can be a key. True multikey access — no sorting required - retrieve records by any key, by exact value or even by partial key value. Full set of commands — add, read, update, delete, find, next. Easy file definition and maintenance. Fully compatible with SCREEN facility. Can be called directly from BASIC program.

LIBRARY SUPPORT OPTION \$75.00

Allows creation of libraries for logical organization of your files and programs. Saves space, increases speed of operation, eases file manipulation.

REPORT WRITER \$75.00

All kinds of reports, invoices, mailing labels, customized letters, special forms can be easily specified and printed.

SPECIAL OFFER - ICPL AND ANY MODULE FOR ONLY \$199.00!!!

COMING SOON \$5,000 GIVEAWAY CONTEST FOR NICE USERS

DosAide

Ever need to go from your program to DOS without losing data? With DosAide you just hit both shift keys and your memory is saved to disk giving you full DOS functions (even go to BASIC) without losing your program data! For all Mod III DOS's.

(103015) \$24.95

HARDWARE

B.T. MOD III DISK UPGRADE KIT

Put Disk Drives into your TRS-80 MOD III. Easy to install with Photo Instruction Manual. Featuring the Holmes Disk Controller (assembled & tested) available with Hardware Real Time Clock and Battery built in. Software Clock routines included.

- 40/80 Single/Double Density Support
- Dual Sided and 8" Drive Support

6502 notation. Memory from 4F61H-4F70H holds the names of the registers displayed by Debug. Modify those bytes to display the 6502 register names. (Caution: you must then refer to those registers using the 6502 names, not the alternate register-set names.)

If you rename BC' as YX', you must type RYX',xxxxh(enter) to change the contents of YX'.

Debugging

Experiment with the two sample programs in Figs. 3 and 4. The first program fills the screen with 250 A's. It's a good program to use while assembling and debugging the Apple Core Emulator. The second program is a keyboard scan that displays a character on the screen when a key is pressed. Assem-

"The emulator's goal is to acquaint you with the operation of the 6502."

bling these 6502 programs enables you to get to know 6502 opcode.

When you debug the emulator, single-step one instruction in all of its addressing modes. If the addressing modes are working correctly, it is easier to pinpoint the subroutines that are assembled with errors.

Run the sample programs by entering the hex code into memory. You will immediately realize one drawback of an emulator: Because it interprets 6502 code, its execution is slow, just as Basic is slow when compared to an Assembly-language program.

However, the emulator's goal is to acquaint you with the operation of the 6502, not to simulate real-time arcade games. If you have software to convert to the 6502, the emulator gives you a head start on the task.

The 6502, together with a variety of support integrated circuits, simplified microcomputer construction. Today you can find 6502 microprocessors used in many popular computers. So if you're looking to expand your understanding of today's microcomputers, a few hours emulating the 6502 will be time well spent. ■

Gary Grout can be reached at 26324 Edgewater Blvd. NW, Poulsbo, WA 98370.

CONVERT YOUR TRS-80 MODEL-I OR III INTO A DEVELOPMENT SYSTEM

Now you can develop Z-80 based, stand-alone devices such as games, robots, instruments and peripheral controllers, by using your TRS-80 as a development system. The DEVELOPMATE plugs into the expansion connector of your TRS-80 and adds **PROM PROGRAMMING** and **IN-CIRCUIT-EMULATION** capabilities to your system (with or without expansion interface).

Complete instructions and sample schematics are included to help you design your own simple stand-alone microcomputer systems. THESE SYSTEMS CAN BE AS SIMPLE AS FOUR ICs: one TTL circuit for clock and reset, a Z-80, an EPROM, and one peripheral interface chip.

When the In-Circuit-Emulation cable is plugged into the Z-80 socket of your stand-alone system, the system becomes a part of your TRS-80: You can use the full power of your editor/ assembler's debug and trace program to check out both the hardware and the software. Simple test loops can be used to check out the hardware, then the system program can be run to debug the logic of your stand-alone device.

Since the program is kept in TRS-80 RAM, changes can be made quickly and easily. When your stand-alone device works as desired, you use the Developmate's PROM PROGRAMMER to copy the program into a PROM. With this PROM, and a Z-80 in place of the emulation cable, your stand-alone device will work by itself.

The DEVELOPMATE is extremely compact: Both the PROM programmer and the In-Circuit-Emulator are in one small plastic box only 3.2" x 5.4". A line-plug mounted power supply is included. The PROM programmer has a "personality module" which defines the voltages and connections of the PROM so that future devices can be accommodated. However, the system comes with a "universal" personality module which handles 2758, 2508 (8K), 2716, 2516 (16K), 2532 (32K), as well as the new electrically alterable 2816 and 48016 (16K EEPROMs).

The COMPLETE DEVELOPMATE 81, for Model I, with software, power supply, emulation cable, TRS-80 cable, and "universal" personality module \$329

DEVELOPMATE 83, Model III version, same as above \$329

PM2 PERSONALITY MODULE for 2732A EPROM \$15

PM3 PERSONALITY MODULE for 2764 EPROM \$15

Manufacturer's Suggested List 4.95
DiskCount Sale Special **4.45**

How to **SAVE 10%**

- Automatic Density Recognition
- Automatic Track Count Recognition
- Automatic DOS Recognition
- The Best Directory On The Market

A great new directory program with its own operating system written by Vernon Hestor. This program will read any DOS there is, even compatibles between Model I and Model III. The Model I program can read most Model III disks and the Model III program can read most Model I disks. 80 character density is also supported.

You can SEARCH the catalog by program name, disk number, extension or do a STRING SEARCH. It will sort in seconds by disk number, program name, remarks, extensions or categories. You can even add a 25 character description of each program. Special print routines for different printers.

SuperDir tracks free space on your disks. It is the FASTEST and EASIEST to use and the only directory able to read multiple DOS on the market.

HI-RES GRAPHICS

A brand new concept, POWERDOT allows you to create hi-resolution screen prints on EPSON (GRAFTRAX & GRAFTRAX+) C.I.TOH PROWRITER printers without any hardware additions or modifications to your TRS-80. You can draw directly on your screen which is a "picture window" of a much larger drawing area and move the window to other areas of the drawing. Your only limitations are imagination and disk space. The completed drawing is dumped to the above printers by reducing and transforming the complete graphic pixels to single hi-res dots. Use the same disk for booting on MOD I or MOD III. Designers, architects, engineers and artists will love this unique drawing program.

POWERMAIL

By Powersoft

Manufacturer's Suggested List
DiskCount Data Special

SAVE 25%

Powermail is a highly sophisticated mass mailing system designed to run under all of the popular DOS's currently available for the Mod I or Mod III. The program is written entirely in machine language for maximum operation speed, and occupies only 4K of the available RAM in your computer. There are no slow periods when Powermail is running. New features have been added to the program that others have always lacked. You now have the ability to keep track of mailings using the 24 'flags' that are incorporated into the Powermail program. The Powermail system will handle a file up to 8 megabytes, or 65535 names, whichever is smaller. The program will also sort the entire maximum file size and open up to 168 files simultaneously during the process. Author Kim Watt

You can create screens of graphics, save to disk, merge them, run in sequence like a movie, merge text with graphics and write your own game or business application screens. PowerDRAW saves graphics to disk or tape so that they can be recalled at a later time in the following formats:
1) CONDENSED TOKENS
2) EDIASM Source file format
3) BASIC data statements
4) BASIC strings
5) BASIC arrays (New in version 1.31)
6) Load File Format
Many more features! Completely cursor controlled. PowerDRAW comes complete with PDRAW/CMD, as well as three other utilities written by Kim for extending the use of PowerDraw. Also has 3 printer drivers including one that is specifically written for the Epson printer with or without a Ultra II! That means all the graphics you design may be printed out PERFECTLY on your printer! Works with joystick also.

BE YOUR
OWN BOSS

The Newest Bulletin Board Communications Network

Your computer becomes a mini-communications network. MICRO-80 allows a person to exchange messages or information via the telephone. Access can be completely public, private to authorized users or limited to certain individuals. MICRO-80 can leave messages on another terminal acting as a rapid electronic mailman. MICRO-80 provides some of the most advanced and most convenient features ever incorporated in a microcomputer bulletin board system including:
Message reformatting to screen width.
Users may send private messages that may be read only by the addressee.
Multi-level system security allows up to 15 levels of security in both the message base and the upload/download database.
MICRO-80 "members" each regular user and stores terminal information, security access levels, last message retrieved during last call etc.
Individual user passwords.
Users may "upload" or "download" data and programs files to MICRO-80. These programs may then be "downloaded" to other MICRO-80 users.
MICRO-80 is self maintaining. Message space is automatically reclaimed when messages are deleted.

EDIT

Full-Screen Editor for TRS-80 Basic, Mod I/III

You need better-than-wordprocessor control when you write and edit BASIC programs. That's why EDIT has lots of better-than-wordprocessor features.

- Full-floating cursor with autorepeat (including function keys).
- Navigation by cursor-controlled scrolling, by line number or by program content.
- Overtyping, Delete or Insert characters of text (including line numbers).
- Join or Split lines. Copy, Delete, Insert, Move, Position or Replicate lines.
- Copy, Delete, Move, Position or Replicate blocks of lines.
- Find and/or Replace occurrences of strings.
- Over 30 commands and functions, supports lower-case.
- 3.3K, relocatable (all DOS), also includes TRSDOS, LDOS overlay version.

You owe it to your programming.

624 KBYTE SYSTEM!

**New
3" disk
cartridge**

COLOR AMDISK-III COMPATIBLE.

The AMDISK-III micro-floppy disk system is an engineering breakthrough in disk size, storage capacity, media protection and user convenience. It's fully compatible with your Radio Shack® Color Computer. Enjoy a full 624 Kbyte* (formatted) storage capability and the extreme convenience of the new 3" hard plastic encased diskettes. They fit into a shirt pocket and are easy to mail, too.

The AMDISK-III drive system is ruggedly constructed for years of trouble-free operation, and is backed with a one-year warranty on parts and labor.

Just circle the reader service number to receive complete specifications.

Basic, Faster and Readable—Part I

by John Corbani

If you remember some of the rules you learned about grammar so long ago, then you should be able to use Basic effectively and efficiently.

The microcomputer industry was built on Microsoft Basic, and with good reason: Basic gets you from here to there in a reasonable amount of time using rules known by anyone who made it through elementary school. All you need is a reasonable understanding of English grammar.

But Microsoft Basic has a tremendous number of unwritten rules that either get you into or out of trouble. This series of articles will help you use those rules, along with the generally accepted rules of grammar, to write programs that run well, are understandable, and are maintainable.

The Rules

Format and punctuate Basic statements using the same rules used in an English sentence, paragraph, or sequence of phrases. Think of a numbered Basic statement as a sentence. Organize statements into groups and put common groups in their own numbered statement as you would put sentences into a paragraph.

Format the text into columns if reasonable. Basic allows 255 characters per

numbered statement. Use as many characters per statement and as many physical lines as make sense. Use LF and spaces as required for exact format. Use spaces and punctuation only when required for readability and where speed constraints make it plausible. See Program Listings 1a and 1b.

Listing 1a is a statement combination that might normally run once when initializing a program. There are no particular constraints on timing, so open things up and give yourself a chance to breathe, as in 1b.

Punctuation is used at the end of statements and lines, as in English. Data is formatted into easily readable rows and columns.

Secondary lines are indented to the same starting position as the text of the first line. The read loop is a complete thought and has its own line. Spaces are used only where readability is improved; note "A=1." No improvement in readability is obtained by typing "A = 1."

NEXT does not require an argument. Don't use one unless there is a possibility of confusion. LET is an anachronism; there is no good reason for its use.

REM statements in programs can either be useful or they can slow things down. It makes sense to identify all major blocks or subroutines. If you put a REM statement immediately in front of a called line number, there will be no speed overhead. Remarks after a GOTO or a RETURN incur no loss of speed overhead and can be used freely. All other situations are suspect.

If you are almost out of memory or character space, remember that REM is saved as one character even though it prints as three. A single quote (') used in place of REM requires 2 bytes of storage even though it prints as one character.

Blank lines in a listing can do wonders to ease readability. If you want a mostly blank line somewhere, type a single quote, a line feed, three or four spaces and a second single quote. The spaces are required only for Centronics printers that overshoot after returning from printing a short line. The trailing single quote gives a smart printer something to do after a series of unprintable characters. A REM statement that incorporates leading and trailing blank lines really gets your attention.

Print is, by far, the fastest and one of the most commonly used Basic operations. There are many ways to perform most print functions and they each have their place. A good starting point for looking at the possibilities is to first position the cursor for printing.

start at memory address 15360 and go for 1,024 bytes, 64 bytes per line, 16 lines per screen. POKE 15360,95 puts a cursor (underline) in the upper left corner of the screen. POKE 15360,32 (space) erases it. While this combination puts what looks like a cursor anywhere on the screen, print statements start wherever they left off after the last print command.

```

40 '

  84,69,83,84,32,76,73,78,69,46,
  13
60 FOR A=1 TO 21: READ X(A): NEXT:
  A=2

```

Program Listing 1b

A device control block (DCB) positions the cursor for print commands. The DCB is set by either print or POKE commands. If you POKE the right number in this 2-byte block, you move the print position wherever you want it. The high byte address is at 16417 and should hold the integer result of dividing the desired screen address by 256. The low byte (16416) holds the remainder after the division. There are times when doing two POKES is easier or faster than printing. Integer variables for both data and addresses can make things go even faster. Try:

POKE 16417, 60: POKE 16416, 0:

The next character printed appears in the upper left corner of the screen. Try again:

POKE 16417, 60: POKE 16416, 130:

The next character printed appears as the third character of the third line.

There are other ways to get from here to there:

PRINT @ 130,;: or
PRINT CHR\$(28) CHR\$(2,26) CHR\$(2,25);:

The first line is straightforward. Print position zero is the upper left corner of the screen. The second statement puts the cursor at the upper left corner of the screen, moves it down two lines and over two spaces. Characters 24 (left), 25 (right), 26 (down), and 27 (up) move the cursor to the next print position without affecting text already on the screen.

Watch out for TAB(n). It is not the same as PRINT STRING\$(n,25). The tab function prints spaces from where you are to column (n) and erases anything it crosses (not good for moving a cursor from the front to the middle of a full line when you want to keep the old text). Character numbers from 192-255 are space strings ranging in length from one character (192) to 64 characters (255). These work just like STRING\$(n,32) where n ranges from one to 64.

```

570 PRINT@130,A$NTAB(10)M;A;"DAYS"
580 PRINT @ 130, A$;N;TAB(10) M;A;"DAYS"
590 PRINT @ 130, A$ N TAB(10) M; A "DAYS"

```

Program Listing 2

PRINT CHR\$(201);: or
PRINT STRING\$(10,32);:

Both statements give you 10 spaces in a row. Anything in the way is cleared out.

Back to positioning for a print command. Try keeping a variable for the X and the Y axes of the screen when you must print in random positions.

```

560 X=2: Y=128
570 PRINT @ X+Y,;

```

Lines 560 and 570 cause subsequent printing to start at the third character position of the third line. The addition overhead is not too bad.

Once you've established the print position, use the Basic punctuation that will print what you want using the fewest readable source code characters possible. A space is as good a character delimiter as the textbook semicolon in most cases and it's easier to read.

Program Listing 2 shows three lines that print the same message at the same place on the screen. 570 is a mess to read, but it runs. 580 is what you might do if you read more into the Radio Shack instructions than is really there. 590 is more readable and only one byte longer. The semicolon after the M separates the two numeric variables. With-

...Now Introducing
The **PRODUCER, Jr.**

(See Technical Comparison Chart on next page.)

Only **\$89.95**

If BASIC somehow doesn't seem so basic, and your software has been getting you nowhere, then let me introduce myself. **THE PRODUCER** is my name. Writing programs is my game. If you're interested in an inexpensive way to quickly and easily write professional quality custom software programs, then read on.

Have you ever wasted money on software that didn't do what you thought it would? Are you burned out on high priced, canned programs that make big claims, but don't meet your needs? Has a lack of good software made your computer an expensive gadget that doesn't do what you hoped it would? If so, I'm here with good news. With my help you can put those problems behind you.

What is THE PRODUCER?

In short, I'm a Program Generator designed to write customized software programs. If you have a need to store and retrieve information, perform calculations on your data and get displayed or printed reports, I can help you develop a program to do just that, in just about any format you can imagine. That's why I'm called a program development system. I'm a powerful and sophisticated software package, born of vast technical knowledge and professional design experience. Yet, I'm the most simple, practical, easy to use and functionally versatile program generator ever put on the market.

What can THE PRODUCER do for you?

How can I help you? Just let me count the ways.

1. I make programming easy. I'm 'user friendly'. If you can answer simple English questions and push buttons, I'll do all the hard work. Let me worry about the BASIC language required to complete your program. Describe the program you want and I'll write it for you. The process is simple. First, I produce a printed planning sheet to help you get your ideas on paper. When you've finished planning, you're ready to draw your screen right on the monitor. The Screen design and appearance is completely at your command, including graphics. You have full editorial control. Make all the changes you like, until you're satisfied. After you're thru, I'll guide you thru some simple English questions about your Screen. Based on your answers, I'll write a complete BASIC program for you.

2. I can save you 100's of hours of time. I provide real short cuts to meet your needs by going direct from your idea to a 'ready to use' customized program. I write all the BASIC code for you. I'm simple, but I'm not shallow. The only limit to my capacity is your imagination.

3. I can save you big bucks. You may never need to buy another program to store and retrieve your data. With my help, you can design your own custom programs to get your job done.

4. I can help make you more productive. Having me as your partner will be like taking a smart pill. I'll pay for myself many times over by increasing your productivity and creativity. With my custom programs serving you, your computer will be the valuable friend you hoped it would be.

5. I can help make you a real pro. Based on your ideas, I write complete stand alone programs. I write in BASIC code, but you talk in English to me. And if you're an entrepreneur, you can sell the programs you and I create. As a licensed owner of THE PRODUCER, you may do so without paying royalties.

6. I can make good programmers much better. I produce fully commented BASIC code so you can use me as a building block to write your own specialized software. I have the best screen and input module available anywhere at any price.

PRODUCER Generated Programs

We understand your reluctance to invest in THE PRODUCER until you know for sure it provides what we say it does. The programs below are unmodified, finished programs generated by THE PRODUCER. Our customers tell us that PRODUCER generated programs are better than many high priced programs written by human professionals. Compare these programs to any you have seen selling at a similar price. Their quality will surprise you. Buy any of these PRODUCER generated programs now and we will gladly apply the cost of that program toward the future purchase of THE PRODUCER. Or buy THE PRODUCER now and select one of the PRODUCER generated programs to be included in your order, absolutely FREE.

What do you get with THE PRODUCER?

1. Two diskettes containing THE PRODUCER program development system, and a complete disk operating system. Also included is a free sample personal management program (value \$59.95) useful to every computer owner.

2. Extensive documentation in a three ring binder, with index tabs, quick reference system, comprehensive index and sections for the novice and professional programmer.

3. Complete printed tutorial, walking through each step in THE PRODUCER process and resulting in a finalized sample program. An audio cassette tape (\$14.95 value) of the tutorial session is also provided free for a limited time.

4. A toll free technical assistance number for PRODUCER owners.

5. A free one year subscription to THE PRODUCER's quarterly newsletter containing ideas, sample programs and update information related to THE PRODUCER.

The PRODUCER, JR.

If you don't need all the features of THE PRODUCER--the professional program writer, and you don't want to spend \$149.95 on software, READ ON. Producer Software has the perfect solution for you.

THE PRODUCER, Jr.

A SIMPLE TO USE professional program generator. And it's only \$89.95. This self documented program generator can have anyone creating self-contained, stand alone programs in no time at all. No other program generator can provide you with ease of use, low price and quality.

FEATURES

- screen generator allows easy definition and creation of fields
- B-tree file lets you search, insert, delete and edit
- reports by single restriction (no sort)
- much more (see technical comparison chart)

The PRODUCER, Jr. comes to you complete with all the above features and its own operating system for only \$89.95. But, don't let this low price fool you--THE PRODUCER, Jr. is still the most powerful program generator on the market today with the exception of the original PRODUCER. And THE PRODUCER, JR. is completely compatible to the original PRODUCER, so if you decide to upgrade at a later date you may do so for only \$75.00. So don't miss out. Order today.

For an independent product review of the PRODUCER see page 62 of March issue of 80 Micro.

Color Sketchpad

by Larry Colle

Creating graphics on your Color Computer is tedious when you have to program the necessary commands. You can avoid this ennui with Draw, a CoCo program that lets you design graphics using your keyboard.

Draw runs on a 16K Color Computer. It includes three Extended Basic functions (Line, Circle, and Paint) and provides four colors. You can create many types of graphics, including pictures and gameboards.

How to Use Draw

When you run Draw, a pixel-sized dot (the cursor) appears in the center of the screen. Move the cursor one space at a time with one of the four arrow keys. Move it continuously by pressing shift and an arrow key simultaneously; the cursor moves until you press another key or until it encounters the edge of the graphics screen.

Change the cursor's color by pressing 1, 2, 3, or 4. These numbers correspond to the colors in the color graphics modes. Pressing 1 makes the cursor disappear, because 1 is the background color. To change from one color set to the other, press R.

To set a pixel's color, move the cur-

By using your keyboard to draw, you can avoid the drudgery of designing graphics.

sor to the pixel, select a color, and press S. Then, every pixel that the cursor passes over adopts this color. Change color by pressing a number key.

Draw horizontal and vertical lines by pressing shift and an arrow key. With some colors, the horizontal and vertical lines are different shades because of the built-in video display generator's border function. To leave the set mode, press S.

Drawing diagonal lines is easy with the line function. Position the cursor

where you want the line to begin and press L. Then place the cursor where you want the line to end and again press L. The line appears between these points. This function's shortcoming is that it uses Extended Basic's Line function and draws only in the foreground color. But using this function is much easier than drawing a line one point at a time.

To draw a circle, position the cursor on the pixel desired for the circle's center, and press C. Then, move the cursor to a pixel on the circumference of the circle and press C again. A circle the color of the cursor appears.

With the Paint function, you can color large areas. Change the cursor to the preferred color and draw a border around the area. Position the cursor inside the area and press P; the area fills with the selected color. You can also paint circles with this method.

A Few Tips

To erase, move the cursor to the appropriate pixels. Change the cursor to the background color, 1. Then, using the set option, erase the pixels by replacing them with the background color.

When the cursor passes through an

MODEL III RS232 & DIRECT CONNECT MODEM

AUTO - ANSWER
DIRECT DIAL OPTION
150 to 19600 BAUD RS232
SOFTWARE PROGRAMMABLE
SINGLE CHIP 300 BAUD MODEM

The new M3CB2 series of internal communications boards for your Model III provide both RS232 Serial Interface and a complete direct connect auto-answer modem. Available in either kit or assembled forms, the new M3CB2 utilize the most advanced LSI communications chips available.

M3CB2-1 Assembled and Tested RS232 Interface\$69.95
M3CB2-2 Complete RS232 and D.C. Modem Kit\$169.95
M3CB2-3 Assembled RS232 and D.C. Modem\$219.95

MDX - 2 Expansion Interface Kit -- \$229

Micro Design MDX-2 Model I Expansion Interface Kits come complete with all necessary parts to build up the entire MDX-2 P.C.B.

MDX - 2 Printed Circuit Board\$74.95
Direct Connect Modem Kit\$39.95
Floppy Disk Controller Kit\$31.95
RS232 Serial Interface Kit\$24.95
Hardware and Socket Kit\$29.95
Memory Expansion Components\$17.95
4116 - 16K Dynamic Ram Chips [set of eight]\$14.95
We carry all of the individual kits for the MDX-2 Expansion Board. Call for pricing and details.

ORDERING INFORMATION

VISA, MC, and American Express accepted. Net 30 terms available to well rated firms. Prices are subject to change without notice. Prices do not include shipping. All orders over \$1000.00 shipped free [UPS Ground]. Fifteen percent restocking charge may be applied to returned merchandise

area of the same color, change the cursor's color.

If the Paint function doesn't work, move the cursor up or down slightly to another location inside the border, and press P again.

Sometimes the program isn't in the keyboard scan routine. If the keyboard doesn't respond to a command, reenter the command.

If your circles aren't round, add a ratio factor to the circle statement in line 90. This factor changes the circle's height-to-width ratio. (I use .88 for my 19-inch Sony.) Consult your manual if you aren't familiar with this syntax.

Should the program not run on your computer, eliminate line 10. Line 10 puts the computer in the faster dual-speed mode of operation. If you use the dual-speed mode, remember to either reset your computer or POKE 65494,1 before doing any cassette tape operations.

EPSON GRAPHICS

FROM YOUR BASIC • FORTRAN • PL-1 • PASCAL PROGRAMS

Grafpac-80 will read data from a disk file on your system and convert it to a hi-resolution plot or graph. Grafpac-80 plots up to 960 dots across and ± 32000 dots vertically on the Epson MX-80 — that's ± 25 pages!!

Grafpac-80 commands include: circle, ellipse, two and three dimensional data, penup/down, plot/move relative or absolute, single character or string plotting with rotation and size control, border generation, and many more...

Grafpac-80 is available for CP/M on 8 inch disk, TRS-DOS (model I and III) on 5 1/4 inch disk. Requires 48K memory. TRS-DOS systems need two disks.*

Prices: TRS-DOS I & III \$49.95

CP/M \$69.95

(Please include \$3.00 shipping charge with all orders)

* A version is available for TRS-DOS users with one disk, however, you must send us a copy of your TRS-DOS and include \$10.00 for copying.

Saving a Display

Use the CSAVEM statement to save a display on cassette tape. The syntax is CSAVEM"NAME", X,Y,Z. NAME is the name you give your display and it must be eight or fewer characters long. X is the starting memory address of the block of machine language or data you want to save. With PMODE3, 1 and with PMODE4, 1, X is 1536. Y is the end address of the block; in this case, it's 7679. Z stands for transfer, which is used by the EXEC command but isn't used here. I use a 1.

To retrieve graphics from tape, use a CLOADM statement with the drawing's name. This loads the file back into the same memory block from which it was saved. Program Listing 2 lets you display the graphics. Use the same PMODE and start page you used when creating the design. You can also load a program into the computer to use or modify the drawing. Just don't use a PCLS statement as this clears graphics memory.

PMODE4

PMODE4 creates some interesting results. With SCREEN1,0, the cursor changes between red and green as it moves horizontally. Vertical lines ap-

WE COULD SHOW THE OLD WOMAN WHAT TO DO WITH THE SHOE.

INVESTOR III™ makes rhyme and reason out of real estate investing.

The Old Woman Who Lived In A Shoe made a great nursery rhyme. But would the shoe make a good real estate investment? Now, with the help of Good Software's INVESTOR III™ you can know. In fact, you can perform real estate analysis with INVESTOR III™ about as easy as a child learns Mother Goose.

Because INVESTOR III™ was developed by a real estate investment company and written by its in-house computer experts, it is both practical and comprehensive. Yet, it's so easy to use that from the moment you load INVESTOR III™ into your Radio Shack TRS-80 or your IBM Personal Computer, you get a step by step process which can analyze everything from a small rent house to a multi-million dollar office project.

To find out more (see if the shoe fits, so to speak) call or write today! What you'll get with INVESTOR III™ is a whole new world of real estate investing at your fingertips. And that's no fairy tale.

pear as the color of the cursor, either bright red or green.

When you draw a series of vertical lines and move the cursor two spaces horizontally between each line, a solid block of either red or green appears. But, moving the cursor one space horizontally between each line creates a block of the normal foreground color. In effect, by manipulating the space between the vertical lines, you can create four colors in PMODE4. The Paint function only paints in the foreground color as it fills all the vertical lines with color. To use PMODE4, alter the program as indicated in Table 1.

Conclusion

You can master this program in a few minutes, and you should find it useful. I use a modified version with a stock market price program; I draw trend lines, channels, envelopes, and projected moving averages over a computer-generated stock chart. Another application might be drawing electronic circuit diagrams and saving completed circuits on tape. ■

Larry W. Colle (12101 N.W. Porter, Parkville, MO 64152) works for KCMO-TV. His hobbies include electronics and playing the guitar.

DSK05	Printer/Power Supply Circuit Board.....	16.00

The Disk-80 Expansion Interface is the perfect peripheral for converting your TRS-80 Model I into a professional computer system. The Disk-80 controls up to four 35 to 77 track mini-disk drives, and contains a hardware data separator which substantially increases the reliability of data transfers. Attaches to the CPU/Keyboard connector and comes complete with mini-disk controller, 32K expansion memory, power supply, optional Centronics compatible printer port, real time clock and buffered bus expansion connector.

"Reviewing Disk-80 is almost incongruous, because any comments can be summarized with the sentence, 'It works.' Dennis Bathory Kitz, 80 Microcomputing, March 1982.

All interfaces are Radio Shack hardware and software compatible and carry a 60 day warranty including parts and labor.
All units include user's manual, power supply & auxiliary TRS-BUS connector for future expansion

N.Y. State residents please add appropriate sales tax.

Comm-80

As featured in Garcia's Circuit Cellar
Byte Magazine, May and June 1980

The COMM-80 is the only interface you need to turn your TRS-80 Model I into a time sharing terminal with provisions for a printer. The COMM-80 combines the most used features of the RS expansion interface in a low cost unit containing a built-in RS-232-C interface, a full 8-bit parallel port and a 40 pin bus connector for future expansion. Terminal software is included at no extra cost.

- RS-232-C Serial output port (50-19200 baud) with standard DB25 connector.
- Centronics compatible parallel printer port (34 pin)
- 40 pin card edge connector for bus expansion
- Connects directly to CRT terminals, modems, printers, other computers.
- Includes case, power supply & interconnecting cable.

Introducing SooperSpooler's™ Little Brother

Who knows spoolers better than Consolink? We pioneered this industry with our revolutionary SooperSpooler, the Intelligent Printer Interface.

Now meet the newest family addition: **MicroSpooler™** especially designed and engineered for those who need cost-effective solutions to their spooler requirements without sacrificing quality and sophistication.

No More Waiting on the Printer

The new MicroSpooler stores data and then feeds it to a printer as fast as the printer can handle it.

That means no down time: in a matter of seconds, your computer is free for the next job **without waiting** for the printer to finish the last job.

Quality, Reliability, Flexibility

As with the SooperSpooler, the new MicroSpoolers are the product of the highest engineering standards to insure trouble-free operation. Now Consolink offers a complete line of stand-alone spoolers that can be installed in-line between virtually any printer and any computer.

Easy to install. Easy to use. Easy on the budget.

Features include:

- 16K Memory: User or factory expandable to 32K or 64K
- Multiple Copy Function
- Status Readout: Tells you how much data is stored or how many copies are left to run
- Pause Function: To let you change paper, make adjustments
- Self-Test Routine: Performs a comprehensive check of most internal functions and memory
- Internal Power Supply: No bulky plug adapters
- Vertical Mount Configuration: Saves desktop space
- Plug-in connections to most computer combinations

- Independently Selectable Baud Rates on Serial Ports
- One Year Limited Warranty**
- Thirty-Day Money Back Guarantee**
- Four Models: Any Combination of Parallel or Serial I/O
- \$199 for 16K parallel to parallel unit with an internal power supply

And When You Need the Very Best...

Remember SooperSpooler, the Intelligent Printer Interface with a remarkable range of software controlled features and formatting capabilities.

The 80 Goes Color—Part II

by James W. Cole

Now that you've modified your TRS-80 so it's capable of color graphics, you need this set of USR routines to enhance your programming.

Last month I described the hardware required to add high-resolution color graphics to the TRS-80 Models I/III. I added an interface circuit between the TRS-80 and the TMS 9918A Video Display Processor (VDP) from Texas Instruments.

The hardware works great, but the four Basic routines I used to control the Mikrokolor are crude and slow, and they require a lot of programming.

This month I'll correct these shortcomings with a set of USR routines, ten machine-language routines that you can call from Basic. Or, if you prefer, include this set as part of your Assembly-language routines.

These USR routines provide a fast, easy interface between the programmer and the TMS 9918A VDP. Before I discuss the detailed control of the VDP, I'll review the relationship between binary and hexadecimal numbers.

duce the patterns for color graphics.

A one-to-one relationship exists between four-digit binary numbers and one-digit hexadecimal (base 16) numbers (see Table 1). It's much easier to deal with a single digit than with four 1's and zeros. The letters A-F represent values greater than nine.

Two of these nibbles (4 bits) together form an 8-bit pattern equivalent to a

byte. A byte is stored in one address of the Z80 microprocessor in your TRS-80 memory or the TMS 9918A VRAM.

By using two hexadecimal digits to represent a pattern of eight binary digits, you reduce the work of entering values by 75 percent. The chance to make mistakes is reduced as well; 110110011

looks just like 110011011, but D3 and CB, their hex equivalents, are easy to distinguish.

Pattern Strings

The TMS 9918A provides a 256-by-192-pixel display of 49,152 dots that you must set or reset with the VDP.

Two of the tables in the TMS 9918A use patterns of 64 pixels. The pattern table and the sprite pattern table use a set of 8 bytes to form a single 8-by-8 pixel pattern. You can think of a pixel as a binary digit; it has only two possible states, on or off. A 1 represents the on state and a zero represents the off state.

The best way to understand how to convert a pixel pattern to hex digits is with an example. Table 2 shows how to form a square, and hex values for the user routine inputs. The first row has all 1's in it, the next six rows have a 1 in the first and last columns, and the last row has all 1's. You can represent this pattern with 16 hex digits (FF8181818181FF) instead of 64 bits (111111110000001100000011000000110000001111111111).

Since USR routines require patterns defined as hex values, you need to understand this process to define your own patterns. One more example is your favorite laser cannon sight. The laser sight is defined by the string 385492EE92543800. When this string passes to the USR routines, it loads the pixel pattern shown in Table 3.

Graph paper helps you design patterns. Take a piece of graph paper, mark off an 8-by-8-character area and color in the 1's and zeros until you find a pleasing combination. Graph paper is

SCRINPUT

(outline #1 in a series)

SCRINPUT, (SCREen INPUT), is a fully relocatable 908 byte machine language routine that replaces the BASIC INPUT statement. Instead of entering data one item at a time, SCRINPUT allows you to create a video form on the screen of your disk based Radio Shack TRS-80 Model 1 or 3. Data entry is then a simple matter of filling in the blanks. Up to 80 "data fields" can be created on one video screen. Each field is assigned a length, screen position and one or more data types: Upper case alpha, lower case alpha, numeric or punctuation. Only characters matching type specifications can be placed in the field.

After defining data fields and specifying screen information, (Caps lock, Case reversal, cursor symbol and initial cursor location are among the features that can be activated), SCRINPUT is called via the BASIC USR function.

A flashing cursor symbol indicates where keyboard entered data will appear. As each character is entered, the cursor moves right one position. At the end of a data field, SCRINPUT repositions the cursor to the start of the next field. Keystrokes of invalid type are ignored.

Arrow keys can be used to move the cursor from one data field to another. Error correction is a simple matter of overtyping the bad characters with new data. The whole process is very similar to traditional screen oriented word processors.

SCRINPUT assigns all data fields to standard BASIC variables. These can be handled by your BASIC program in the same manner as information gathered by INPUT. You can even include error checking to insure that information is within reasonable bounds.

Be warned! SCRINPUT is only a utility and is designed for use within BASIC programs. If you cannot program, you can't use SCRINPUT. SCRINPUT works with any Disk Operating System (DOS) and comes with a 65 page manual containing sample programs, instructions and suggestions. Flow charts and source code are also included.

SCRINPUT has a 15 day money back guarantee: If you are not satisfied for ANY reason, return the package in good condition for a full refund. This is an enhanced version of the original SCRINPUT reviewed in the 4/82 issue of 80 Micro. Features added since that review include character insert and delete, user defined cursor character, a completely revised manual and alterations to allow easy use of SCRINPUT in the editing of existing data files.

SCRINPUT 3.0 is priced at \$49.95 plus 3.00 shipping. CHECKS, VISA and MASTER-CHARGE are accepted. We cannot accept ANY purchase orders — including government agencies! Phone orders are welcome. Call (702) 367-2033 for prompt service or use the order blank below.

Note: If locations are sequential, it is not necessary to load the screen location every time. The program will automatically increment the location.

USR Routines

The set of 10 USR routines I have defined provides control over most of the functions of the TMS 9918A. Table 4 shows the calling sequence for each operation you might want to perform. All hex string values are filled with F's; you will replace these values with your own strings.

The VARPTR function passes strings to the USR routines. More information on this function is in your Basic manual. Now take a closer look at each of these USR routines.

USR0 selects the mode of operation for the TMS 9918A, clears the pattern plane, clears all sprites, and sets default colors for the background and pattern planes.

USR1 selects pattern size of sprites (8-by-8-character or 16-by-16-character), and selects the magnification factor of sprites *1 or *2.

USR2 updates sprite location on the screen. If you call USR2 with a positive sprite number, update the vertical coordinate. If you call it with a negative sprite number, update the horizontal coordinate. You must load the value of the coordinate into a temporary location by calling USR3.

USR3 temporarily stores values to be used by another routine. These values can be a pattern number, a pointer to a string, or even a two-character string itself.

USR4 loads a pattern into the pattern table. The pattern number is passed in the USR4 call. A pointer to the string of 16 hex digits that is to be loaded into the pattern table is in the temporary value of USR3.

USR5 loads a pattern into the sprite pattern table. This routine performs the same function for sprites as USR4 does for the pattern plane, except that the sprites can be either 16 hex digits or 64 hex digits depending on the sprite size selected in USR2.

USR6 sets the colors for the various modes. For text, the color string for the background and character color are passed directly in the USR6 call. For multicolor, the color string is passed through USR3, and the pattern number is passed in the USR6 call. Graphics I and graphics II are identical to multicolor except for the length of the string.

USR7 serves two purposes. If you call it with a positive sprite number, it sets the color of the sprite to the value pointed to by the USR3 temporary variable. If you call USR7 with a negative

SOFTCOMM

MODEL I/III
SMART TERMINAL
PROGRAM

One version for both Models I and III computers! Features include full ASCII or binary file uploading and downloading. 8 programmable buffers with imbedded carriage returns, auto log-on, spooled printer output, local echo, DOS commands, and much more. No supporting programs are included because none are needed! Our all-in-one terminal program is now in use by hundreds of satisfied customers. Includes complete instruction manual.

\$49⁹⁵*

Specify disk or tape. Model III disk is TRSDOS 1.3 under License from Tandy Corp. Model I disk is TRDOS 2.3 compatible data disk.

sprite number, it sets the name of the sprite to the value in the USR3 temporary variable.

USR8 also serves two purposes. If you call it with a positive value, it sets the entire pattern plane to pattern zero. This clears the screen if pattern zero is defined as all zeros or all 1's. If you call USR8 with a negative value, it turns off all sprite processing (clearing all sprites).

USR9 prints a pattern at a particular location on the screen that is passed in USR3 and is automatically incremented for sequential operation. The pattern number is passed in the USR9 call.

Basic Functions

One of the easiest ways to call these USR routines is by defining a set of functions at the beginning of a Basic program.

Functions allow you to call a set of USR routines in a sequence with only one statement. These functions should be defined near the beginning of your program, just after you define the USR-routine starting locations. You should order your program as follows:

- Variable declarations, including type definitions and array declarations
- USR routine addresses defined
- Functions defined
- Basic program logic
- End of program

Program Listing 1 shows the use of Basic functions.

Options

This program runs on a machine with

48K of memory. With minor changes, it runs on a 32K or 16K machine. You need to change the origin statement to a lower address and the USR routine addresses to the new memory locations. Answer the memory-size question for a 48K machine with 61440.

You can also use these programs in your own routines to control the TMS 9918A. I have included a few elementary functions that let you read/write the VRAM of the TMS 9918A, write to the control register, and read the status register.

These are the same four Basic operations shown last month but they are now in Assembly language. The rest of the program uses these routines to perform the operations requested by the USR routine.

Finished?

The hardware and software are both complete, and your TRS-80 can draw high-resolution color graphics. However, you still have games and 3D graphics packages to write. You could use the 16K of VRAM as a printer buffer with the right software to drive it. You don't even have a character set defined for the text mode yet.

This project has just begun. Look for more programs for the Mikrokolor interface in the future, some from me and possibly some from other users who have new applications. ■

James Cole can be reached at 515 Aspen St., Vandenberg, CA 93437.

What do people who've used the NEW amber or green replacement CRT's say about them?

"I just purchased one of your Soft-View CRT's and I wanted to tell you how much I like it..."

"Owning one of your CRT's blows all the other green-screen products away. With the non-glare surface on the tube, I could even throw away my old Radio Shack glare mask."

"I'm using my TRS-80 now to write this letter and with this CRT installed it's almost like owning a different computer! No more eyestrain and distorted pictures from my old glare mask! Thanks, Langley-St.Clair!"

Walter Coe
Tampa, Florida

From unsolicited letters of testimonial, reprinted with permission

"I've just received and installed my GN42G cathode-ray tube. To say the least, I am impressed! Its operation is everything that you represented in your advertisement and then some. It is now a real pleasure to program my computer for hours on end without getting the side effects from the flickering display of the old CRT."

"...I cannot emphasize enough about the quality and performance of my Langley-St.Clair GN42G CRT. The instructions were very easy to follow and very thorough even if one had no electronics experience. You have a terrific product - keep up the good work!"

Galen S. Casey
Clovis, California

Listing 2 continues

from **HOWE SOFTWARE**
FOR TRS-80 MODELS I, II & III & the IBM PC

System Diagnostic

For Cassette or Disk

IS YOUR COMPUTER WORKING CORRECTLY? ARE YOU SURE?
Tests every component of your TRS-80 for proper operation.

DISK

\$99.95

CASSETTE

\$94.95

ROM: Checksum test

RAM: Four separate tests including every address and data value

Video Display: Character generator, video RAM, and video signal tests

Keyboard: Every key contact tested

Line Printer: Character test

Cassette Recorder: Read/write/verify data

RS-232-C Interface: Read sense switches (Model I), connector fault, data transmission, framing, data loop, baud rate generator

Disk Drives: Disk controller, drive select and restore, track seek and verify read, read/write/verify all tracks and sectors, formatting, disk drive timer, disk head cleaner

Model I: single or double density, 35, 40 or 80 track drives

Model 3: single or double density, 35, 40 or 80 track drives
 single or double sided drives

- One program adapts to any system configuration and hardware.
- Individual tests of each device with operator monitoring and intervention.
- Continuous system tests run continually for hours, with diagnostic reports optionally written on line printer.
- Complete instructions and documentation.

SMART TERMINAL

Enables your TRS-80 to be used as a data communications terminal to a time-sharing system, computer bulletin board, or another computer, via the RS-232-C interface.

- MEMORY BUFFER holds data for transmission or data received from other computer.
- CASSETTE or DISK may be used to load or save data from memory.
- AUTOMATIC TRANSMISSION of data from memory.
- AUTOMATIC STORAGE of incoming data at user's option.
- TRANSMIT or RECEIVE WITH VERIFICATION options included for communication between two TRS-80s using Smart Terminal.
- Full CONTROL KEYS, including control key mapping into any ASCII character. True BREAK key. Lower case supported on Model I.
- Buffered LINE PRINTER ECHO for incoming data.
- Disk and cassette files fully compatible with ELECTRIC PENCIL™ and SCRIPSI™ programs.
- BAUD RATE and RS-232-C CHARACTERISTICS can be reset from within the program.
- SAVE PROGRAM option creates "personalized" back-up copy of program with all options set as specified by user.
- ONE PROGRAM supports both cassette and disk systems. Program is compatible with PMC-80 and other TRS-80 "work alike" computers.

Model I or III Version supplied on cassette \$69.95
Model II (CP/M) Version supplied on diskette \$74.95
\$79.95

MON-3 and MON-5

Monitor Programs #3 and #5 are powerful utility programs which enable you to interact directly with the TRS-80 in machine language. They are useful both for beginners and for advanced programmers.

- BEGINNERS can learn to use machine language.
- COMPLETE instruction manual.
- SIMPLE commands, easy to use.

Both MON-3 and MON-5 contain the following features:

- DISPLAY memory in ASCII and hexadecimal form.
- DISASSEMBLE memory to see machine language commands.
- MOVE and COMPARE blocks.
- SEARCH through memory to find specific values.
- MODIFY memory in different ways.
- RELOCATE object programs.
- READ and WRITE object tapes in SYSTEM format.
- UNLOAD programs in low RAM on disk.
- CREATE SYMBOTIC CASSETTES of disassembled output for use as input to EDTASM program (MON-3 only).
- PRINT output optionally on video display or line printer.

Monitor #5 adds the following features:

- SAVE and LOAD disk files.
- INPUT and OUTPUT of disk sectors, bypassing disk operating system.
- RS-232-C COMMANDS for terminal mode, send and receive data.
- COMPLETE DEBUGGING PACKAGE including setting and displaying registers, single stepping, setting breakpoints and executing machine instructions.

Available for Model I and III Level II computers (16K, 32K and 48K).

Specify TRS-80™ Model I or III

MON-3 (for cassette systems) \$39.95

MON-5 (for disk systems) \$59.95

SPECIFY TRS-80™ MODEL I OR MODEL III

MAILING LIST

Maintains mailing lists of up to 1326 names (48K version). Add, change, delete, or find names. Machine language sort according to information in ANY field (first or last name, address, city, state, zip code). Three or four line labels printed in 1, 2, 3, or 4 columns, in master list, or on video display.

TRS-80 Model 1/3 Disk Version \$69.95
IBM PC Disk Version \$79.95

HOME BUDGET

Keeps track of your monthly and year-to-date income and expenses. Income and expenses classified by code numbers for identification of categories. Data includes date, code number, amounts and check number (optional). Computes monthly and year-to-date summaries showing income tax deductions. All output printed on video display or line printer at user's option. Complete instructions for customizing to suit your own budget.

TRS-80 Model 1/3 Cassette Version \$29.95
TRS-80 Model 1/3 Disk Version \$49.95
IBM PC Disk Version \$59.95

SMALL BUSINESS ACCOUNTING

Based on Dome Bookkeeping Record #612, this program keeps track of income, expenditures, and payroll for a small business. Receipts and expenditures can be entered on a daily, weekly, or monthly basis. Program computes monthly, through last month, and year to date summaries. Payroll section (included in disk version only) keeps record of employees and paychecks with up to six categories of payroll deductions. Computes employee payroll records and year-to-date payroll totals. Complete instructions for customizing to suit your own business.

TRS-80 Model 1/3 Cassette Version \$29.95
TRS-80 Model 1/3 Disk Version \$59.95
IBM PC Disk Version \$69.95

BUSINESS 100 PROGRAM LIST

NAME

DESCRIPTION

1	RULE78	Interest Apportionment by Rule of the 78's
2	ANNU1	Annuity computation program
3	DATE	Time between dates
4	DAYYEAR	Day of year a particular date falls on
5	LEASEINT	Interest rate on lease
6	BREAKEYN	Breakeven analysis
7	DEPRSL	Straightline depreciation
8	DEPRSY	Sum of the digits depreciation
9	DEPRDB	Declining balance depreciation
10	DEPRDDDB	Double declining balance depreciation
11	TAXDEP	Cash flow vs. depreciation tables
12	CHECK2	Prints NEBS checks along with daily register
13	CHECKBK1	Checkbook maintenance program
14	MORTGAGE/A	Mortgage amortization table
15	MULTMON	Computes time needed for money to double, triple, etc.
16	SALVAGE	Determines salvage value of an investment
17	RRVARIN	Rate of return on investment with variable inflows
18	RRCONST	Rate of return on investment with constant inflows
19	EFFECT	Effective interest rate of a loan
20	FVAL	Future value of an investment (compound interest)
21	PVAL	Present value of a future amount
22	LOANPAY	Amount of payment on a loan
23	REGWITH	Equal withdrawals from investment to leave 0 over
24	SIMPDISK	Simple discount analysis
25	DATEVAL	Equivalent & nonequivalent dated values for oblig.
26	ANNUDEF	Present value of deferred annuities
27	MARKUP	% Markup analysis for items
28	SINKFUND	Sinking fund amortization program
29	BONDVAL	Value of a bond
30	DEPLETE	Depletion analysis
31	BLACKSH	Black Scholes options analysis
32	STOCVAL1	Expected return on stock via discounts dividends
33	WARVAL	Value of a warrant
34	BONDVAL2	Value of a bond
35	EPSEST	Estimate of future earnings per share for company
36	BETAALPH	Computes alpha and beta variables for stock
37	SHARPE1	Portfolio selection model i.e. what stocks to hold
38	OPTWRITE	Option writing computations
39	RIVAL	Value of a right
40	EXPVAL	Expected value analysis
41	BAYES	Bayesian decisions
42	VALPRINF	Value of perfect information
43	VALADINF	Value of additional information
44	UTILITY	Derives utility function
45	SIMPLEX	Linear programming solution by simplex method
46	TRANS	Transportation method for linear programming
47	EOQ	Economic order quantity inventory model
48	QUEUE1	Single server queueing (waiting line) model
49	CVP	Cost-volume-profit analysis
50	CONDPROF	Conditional profit tables
51	OPTLOSS	Opportunity loss tables
52	FQOQ	Fixed quantity economic order quantity model
53	FQEOVSH	As above but with shortages permitted
54	FQEQPB	As above but with quantity price breaks
55	QJUECB	Cost-benefit waiting line analysis
56	NCFANAL	Net cash-flow analysis for simple investment
57	PROFIND	Profitability index of a project
58	CAP1	Cap. Asset Pr. Model analysis of project

59	WACC	Weighted average cost of capital
60	COMBAL	True rate on loan with compensating bal. required
61	DISCBAL	True rate on discounted loan
62	MERGANAL	Merger analysis computations
63	FINRAT	Financial ratios for a firm
64	NPV	Net present value of project
65	PRINDLAS	Laspeyres price index
66	PRINDPA	Paasche price index
67	SEASIND	Constructs seasonal quantity indices for company
68	TIMETR	Time series analysis linear trend
69	TIMEMOV	Time series analysis moving average trend
70	FUPRINF	Future price estimation with inflation
71	MAILPAC	Mailing list system
72	LETWRT	Letter writing system-links with MAILPAC
73	SORT3	Sorts list of names
74	LABEL1	Shipping label maker
75	LABEL2	Barrie label maker
76	BUSBUD	DOME business bookkeeping system
77	TIMECLCK	Computes weeks total hours from timeclock info.
78	ACCTPAY	In memory accounts payable system-storage permitted
79	INVOICE	Generate invoice on screen and print on printer
80	INVENT2	In memory inventory control system
81	TELDIR	Computerized telephone directory
82	TIMUSAN	Time use analysis
83	ASSIGN	Use of assignment algorithm for optimal job assign.
84	ACCTREC	In memory accounts receivable system-storage ok
85	TERMSPAY	Compares 3 methods of repayment of loans
86	PAYNET	Computes gross pay required for given net
87	SELLPR	Computes selling price for given after tax amount
88	ARBCOMP	Arbitrage computations
89	DEPRSF	Sinking fund depreciation
90	UPSZONE	Finds UPS zones from zip code
91	ENVELOPE	Types envelope including return address
92	AUTOEXP	Automobile expense analysis
93	INSFILE	Insurance policy file
94	PAYROLL2	In memory payroll system
95	DILANAL	Dilution analysis
96	LOANAFPD	Loan amount a borrower can afford
97	RENTPRCH	Purchase price for rental property
98	SALELEAS	Sale-leaseback analysis
99	RCONVBD	Investor's rate of return on convertible bond
100	PORTVAL9	Stock market portfolio storage-valuation program

Introducing the Most Powerful Business Software Ever!

TRS-80™ (Model I, II, III, or IV) • APPLE™ • IBM™ • OSBORNE™ • CP/M™ • XEROX™

The VERSABUSINESS™ Series

Each VERSABUSINESS module can be purchased and used independently, or can be linked in any combination to form a complete, coordinated business system.

VERSARECEIVABLES™

\$99.95

VERSARECEIVABLES™ is a complete menu-driven accounts receivable, invoicing, and monthly statement-generating system. It keeps track of all information related to who owes you or your company money, and can provide automatic billing for past due accounts. VERSARECEIVABLES™ prints all necessary statements, invoices, and summary reports and can be linked with VERSALEDGER II™ and VERSAINVENTORY™.

VERSAPAYABLES™

\$99.95

VERSAPAYABLES™ is designed to keep track of current and aged payables, keeping you in touch with all information regarding how much money your company owes, and to whom. VERSAPAYABLES™ maintains a complete record on each vendor, prints checks, check registers, vouchers, transaction reports, aged payables reports, vendor reports, and more. With VERSAPAYABLES™, you can even let your computer automatically select which vouchers are to be paid.

VERSAPAYROLL™

\$99.95

VERSAPAYROLL™ is a powerful and sophisticated, but easy to use payroll system that keeps track of all government-required payroll information. Complete employee records are maintained, and all necessary payroll calculations are performed automatically, with totals displayed on screen for operator approval. A payroll can be run totally, automatically, or the operator can intervene to prevent a check from being printed, or to alter information on it. If desired, totals may be posted to the VERSALEDGER II™ system.

VERSAINVENTORY™

\$99.95

VERSAINVENTORY™ is a complete inventory control system that gives you instant access to data on any item. VERSAINVENTORY™ keeps track of all information related to what items are in stock, out of stock, on backorder, etc., stores sales and pricing data, alerts you when an item falls below a preset reorder point, and allows you to enter and print invoices directly or to link with the VERSARECEIVABLES™ system. VERSAINVENTORY™ prints all needed inventory listings, reports of items below reorder point, inventory value reports, period and year-to-date sales reports, price lists, inventory checklists, etc.

VERSALEDGER II™

\$149.95

VERSALEDGER II™ is a complete accounting system that grows as your business grows. VERSALEDGER II™ can be used as a simple personal checkbook register, expanded to a small business bookkeeping system or developed into a large corporate general ledger system without any additional software.

- VERSALEDGER II™ gives you almost unlimited storage capacity (300 to 10,000 entries per month, depending on the system),
- stores all check and general ledger information forever,
- prints tractor-feed checks,
- handles multiple checkbooks and general ledgers,
- prints 17 customized accounting reports including check registers, balance sheets, income statements, transaction reports, account listings, etc.

VERSALEDGER II™ comes with a professionally-written 160 page manual designed for first-time users. The VERSALEDGER II™ manual will help you become quickly familiar with VERSALEDGER II™, using complete sample data files supplied on diskette and more than 50 pages of sample printouts.

SATISFACTION GUARANTEED!

Every VERSABUSINESS™ module is guaranteed to outperform all other competitive systems, and at a fraction of their cost. If you are not satisfied with any VERSABUSINESS™ module, you may return it within 30 days for a refund. Manuals for any VERSABUSINESS™ module may be purchased for \$25 each, credited toward a later purchase of that module.

To Order:

Write or call Toll-free (800) 431-2818
(N.Y.S. residents call 914-425-1535)

The Complete Book Of Random Access Data File Programming

For TRS-80*, IBM Personal Computer*, Osborne*, and all Microsoft BASIC* computers

The last word on disk random access and file handling techniques, this series is intended for everyone — beginning programmers, businessmen and professionals will learn how to create custom programs to handle inventories, mailing lists, work scheduling, record keeping, and many other tasks, while more experienced programmers will learn advanced, professional programming techniques for faster, more efficient data storage and retrieval.

Although random access file handling is a matter of some complexity, the subject has been treated in a simple and down-to-earth fashion, so that anyone with some small familiarity with programming in Microsoft BASIC will be able to cope with the material. Each stage of learning uses a sample program as a starting point. The programs grow in capability and complexity as the books progress into all of the various aspects of file handling and record manipulation. An extensive effort has been made to keep the material coherent and every program line is explained in detail.

Volume I: Basic File Handling Techniques

- The writing of a Menu to Summarize program functions
- The writing of a screen format to accept data for records
- The creation of the basic record
- The FIELD and LSET routines for buffer preparation
- The writing of the record to disk in a random access mode
- The ability to change or edit a record
- The LPRINT capability from disk using three different formats
- Deleting a record from a random file
- Sorting the random file
- Searching the random file by name or key field
- The ability to search in a "NEXT or PRIOR" fashion
- The ability to purge deleted records from a disk file
- The ability to calculate with data from a disk file
- The provision for future expansion of the data fields
- The use of flags to prevent program crashes
- Date setting, printer on-line and many other routines to make a program run like a commercially-written program

Volume II: Advanced File Handling Techniques

- Blocking & de-blocking, Shell-Metzner sort, In-place screen editing, recovery of deleted record space
- Alpha-index record retrieval, fast machine/BASIC sort
- Linked list record structure and sort-merge, deleted record removal and file reorganization
- Multi-key file reorganization and record searching
- Relational database programming--comprehensive self-balancing accounting system with printouts
- Hashcoded data file manipulation--(probably the fastest method of data retrieval). Hashing the input key and recovery method explained
- Span-blocking techniques (allows; creation of records longer than 256 bytes without wasted space)

The Complete Book Of Random Access Data File Programming

Volume I: Basic File Handling Techniques	\$29.95
optional Vol. I Program Disk for Model I/III	\$28.50
optional Vol. I Program Disk for Model II	\$32.50
Volume II: Advanced File Handling Techniques	\$29.95
optional Vol. II Program Disk for Models I, II or III	\$49.95

- *** ALL PROGRAMS ARE WRITTEN IN MACHINE LANGUAGE
- *** ABSOLUTELY NO KNOWLEDGE OF MACHINE LANGUAGE IS NECESSARY TO USE ANY OF THE UTILITY PROGRAMS
- *** EACH UTILITY PROGRAM IS CALLED UP FROM BASIC USING THE SIMPLE BASIC COMMANDS PROVIDED
- *** EACH UTILITY PROGRAM COMES WITH A RACET COMPUTES INSTRUCTION MANUAL
- *** EACH INSTRUCTION MANUAL INCLUDES SEVERAL EXAMPLES OF UTILITY USAGE
- *** EACH UTILITY ALLOWS THE USER TO PERFORM CERTAIN BASIC OPERATIONS TEN, TWENTY OR MORE TIMES FASTER THAN THE EQUIVALENT BASIC ROUTINE (FOR EXAMPLE, GSF CAN SORT AN ARRAY OF 1000 RANDOM NAMES INTO ALPHABETICAL ORDER IN UNDER 9 SECONDS!!)

GSF (GENERALIZED SUBROUTINE FACILITY)

- SORTS 1000-ELEMENT ARRAYS IN 9 SECONDS
- SORTS UP TO 15 ARRAYS SIMULTANEOUSLY (MIXED STRING, FLOATING POINT AND INTEGER)
- SORTS SINGLE OR MULTIPLE SUBSTRINGS AS ASCENDING OR DESCENDING SORT KEYS
- READ AND WRITE ARRAYS TO CASSETTE
- COMPRESS AND UNCOMPRESS DATA IN MEMORY
- MOVE ARRAYS IN MEMORY
- DUPLICATE MEMORY
- FAST HORIZONTAL AND VERTICAL LINES
- SCREEN CONTROLS FOR SCROLLING THE SCREEN UP, DOWN, LEFT, RIGHT AND FOR GENERATING INVERSE GRAPHIC DISPLAYS
- ADDS PEEKS AND POKES (MOD-II VERSION ONLY)

MODEL-I VERSION \$25.00
MODEL-II VERSION \$50.00
MODEL-III VERSION \$30.00

KFS-80 (KEYED FILE SYSTEM)

- CREATE ISAM FILES (INDEX SEQUENTIAL ACCESS METHOD)
- ALLOWS INSTANT ACCESS TO ANY RECORD ON YOUR DISKETTE
- INSTANTLY RETRIEVE RECORDS FROM MAILING LISTS, INVENTORY, ACCOUNTS RECEIVABLE OR VIRTUALLY ANY APPLICATION WHERE RAPID ACCESS IS REQUIRED TO NAMED RECORDS
- PROVIDES THE BASIC PROGRAMMER THE ABILITY TO RAPIDLY INSERT OR ACCESS KEYED RECORDS IN ONE OR MORE DATA FILES
- RECORDS ARE MAINTAINED IN SORTED ORDER BY A SPECIFIED KEY
- RECORDS MAY BE INSERTED OR RETRIEVED BY SUPPLYING THE KEY
- RECORDS MAY BE RETRIEVED SEQUENTIALLY IN SORTED ORDER
- RAPID ACCESS TO ANY FILE REGARDLESS OF THE NUMBER OF RECORDS
- MULTIPLE INDEX FILES CAN BE EASILY CREATED WHICH ALLOWS ACCESS OF A SINGLE DATABASE BY MULTIPLE KEYS (FOR EXAMPLE, BY BOTH NAME AND ZIP-CODE)

MODEL-I VERSION \$100.00
MODEL-II VERSION \$175.00
MODEL-III VERSION \$100.00

DSM (DISK SORT MERGE)

- SORT AN 85K DISKETTE IN LESS THAN THREE MINUTES!
- SORTS LARGE MULTIPLE DISKETTE FILES ON A MINIMUM ONE DRIVE SYSTEM
- ALL RECORDS ARE PHYSICALLY REARRANGED-NO KEY FILES ARE REQUIRED
- SORTS RANDOM FILES CREATED BY BASIC, INCLUDING FILES CONTAINING SUB-RECORDS SPANNING SECTORS
- SORTS ON ONE OR MORE FIELDS IN ASCENDING OR DESCENDING ORDER
- FIELDS MAY BE STRINGS, INTEGER, BINARY INTEGER OR FLOATING POINT
- THE SORTED OUTPUT FILE MAY OPTIONALLY HAVE FIELDS DELETED, REARRANGED OR PADDED
- SORT COMMANDS CAN BE SAVED FOR REUSE
- SINGLE SORT, MERGE, OR MIXED SORT/MERGE OPERATIONS MAY BE PERFORMED
- SORTED OUTPUT MAY BE WRITTEN TO A NEW FILE, OR REPLACE THE ORIGINAL INPUT FILE

MODEL-I VERSION \$75.00
MODEL-II VERSION \$150.00
MODEL-III VERSION \$90.00

MAILLIST (A MAILING LIST DATABASE SYSTEM)

- IDEALLY SUITED FOR ORGANIZATION MAILING LISTS, PERSONAL ADDRESSBOOK, OR MAILING LISTS BASED ON DATES SUCH AS REMINDERS FOR BIRTHDATES OR DUES PAYABLE
- USED ISAM (INDEX SEQUENTIAL ACCESS METHOD) FOR RAPID ACCESS TIMES
- YOUR MAILLIST CAN ALWAYS BE SORTED AND MAINTAINED BY UP TO FOUR INDEX FILES (FOR EXAMPLE, NAME, ZIPCODE, DATE AND NUMBER)
- MAILLIST ALLOWS UP TO 30 ATTRIBUTES TO BE SPECIFIED (TO BE USED IN SELECTION OF SPECIFIED RECORDS WHEN GENERATING REPORTS OR MAILING LABELS)
- MAILLIST SUPPORTS BOTH 5 OR 9-DIGIT ZIPCODES
- PRINTING MAY BE STARTED OR ENDED AT ANY POINT IN THE LIST.. THE USER CAN SPECIFY FIELDS OR CODES TO BE PRINTED
- CAPACITY IS 600 NAMES FOR MODEL-I, 3500 NAMES FOR MODEL-II, 38,000 NAMES FOR MODEL-III WITH HARD DISK DRIVE, 1200 NAMES FOR MODEL-III

MODEL-I VERSION \$75.00
MODEL-II VERSION \$150.00
MODEL-III VERSION \$75.00

HSDS HARD DISK DRIVE SOFTWARE

- MAKES TRSDOS COMPATIBLE WITH MOST HARD DISK DRIVES
- ADDS MANY EXTRA FEATURES TO TRSDOS..... \$400.00

COMPROC (COMMAND PROCESSOR)

- AUTO YOUR DISK TO PERFORM ANY SEQUENCE OF INSTRUCTIONS THAT YOU NORMALLY GIVE FROM THE KEYBOARD (FOR EXAMPLE, INSERT THE DISKETTE, PRESS THE RESET BUTTON, YOUR COMMAND FILE COULD AUTOMATICALLY SHOW YOU THE DIRECTORY, SHOW THE FREE SPACE ON THE DISKETTE, LOAD A MACHINE LANGUAGE SUBROUTINE, LOAD BASIC, LOAD AND RUN A BASIC PROGRAM, AND SELECT A GIVEN ITEM ON YOUR MENU ALL WITHOUT TOUCHING THE KEYBOARD!)

MODEL-I VERSION \$20.00
 MODEL-III VERSION \$30.00
 NOT AVAILABLE FOR MODEL-II

DISCAT (DISKETTE CATALOG SYSTEM)

- THIS COMPREHENSIVE DISKETTE CATALOGUING/INDEXING UTILITY ALLOWS THE USER TO KEEP TRACK OF THOUSANDS OF PROGRAMS IN A CATEGORIZED LIBRARY. FILE INCLUDES PROGRAM NAMES AND EXTENSIONS, PROGRAM LENGTH, DISKETTE NUMBERS AND FREE SPACE ON EACH DISKETTE. KEEP A COMPLETE CATALOG OF THE DIRECTORIES ON ALL YOUR DISKETTES IN ALPHABETICAL ORDER (SORTED ON EACH DISKETTE) OR COMPLETE ALPHABETICAL LIST OF PROGRAMS ON ALL YOUR DISKETTES)

MODEL-I VERSION \$50.00
 MODEL-III VERSION \$50.00
 MODEL-II VERSION (SEE MODEL-II UTILITY PACKAGE)

BLINK (BASIC LINK FACILITY)

- LINK FROM BASIC PROGRAM TO ANOTHER SAVING ALL VARIABLES
- THE CHAINED PROGRAM MAY EITHER REPLACE THE ORIGINAL PROGRAM OR CAN BE MERGED BY STATEMENT NUMBER

MODEL-I VERSION \$25.00
 MODEL-III VERSION \$30.00
 MODEL-II VERSION (SEE MODEL-II UTILITY PACKAGE) \$50.00

INFINITE BASIC

- ADDS OVER 80 COMMANDS TO BASIC
- SORTING STRING CENTERING/ROTATION JUSTIFICATION DATA COMPRESSION STRING TRANSLATION/COPYING SCREEN DISPLAY SCROLLING MATRIX OPERATIONS SIMULTANEOUS EQUATIONS (THROUGH MATRIX INVERSION) DYNAMIC ARRAY RESHAPING

MODEL-I VERSION \$50.00
 MODEL-III VERSION \$60.00
 NOT AVAILABLE ON MODEL-II

INFINITE BUSINESS

- ADD ON PACKAGE TO INFINITE BASIC (REQUIRES INFINITE BASIC)
- ADDS PACKED DECIMAL ARITHMETIC WITH 127 DIGIT ACCURACY (+,0,/,)
- COMPLETE PRINTER PAGINATION CONTROLS AUTO HEADERS, FOOTERS AND PAGE NUMBERS
- BINARY SEARCH OF SORTED AND UNSORTED ARRAYS (INSTANT SEARCH OF AN ELEMENT WITHIN AN ARRAY)
- HASH CODES

MODEL-I VERSION \$30.00
 MODEL-III VERSION \$30.00
 NOT AVAILABLE ON MODEL-II

REMODEL-PROLOAD

- THE ULTIMATE RENUMBERING PROGRAM RENUMBERS ALL OR PART OF A PROGRAM (ALLOWS PARTIAL RENUMBERING IN MIDDLE OF PROGRAMS)
- PARTIAL OR COMPLETE MERGE OF TWO CASSETTE PROGRAMS

MODEL-I VERSION \$35.00
 MODEL-III VERSION \$35.00
 NOT AVAILABLE ON MODEL-II

COPYSYS

- COPY AND VERIFY ALL MACHINE LANGUAGE (SYSTEM) TAPES WRITTEN IN STANDARD FORMAT IF YOU BUY A MACHINE LANGUAGE PROGRAM, COPYSYS ALLOWS YOU TO EASILY COPY THE PROGRAM ONTO ANOTHER CASSETTE AS A BACKUP

MODEL-I VERSION \$15.00
 MODEL-III VERSION \$20.00
 NOT AVAILABLE ON MODEL-II

FOR DEALER

INFORMATION CALL:

RACET COMPUTES

1330 N. GLASSEL, SUITE M, ORANGE CA 92667
 (714) 997-4950

MODEL II SPEEDUP—FAST DISK I/O

THIS IS AN ENHANCEMENT FOR TRSDOS 2.0 THAT WILL RADICALLY DECREASE DISK ACCESS TIME.

- DISKS BOOT FASTER TO DOS
- IMPROVE DISK I/O UNDER BASIC

MODEL II ONLY \$99.95

MODEL II FASTBACK — FULL DISK BACKUP IN 55 SECONDS

IN BUSINESS TIME IS MONEY, AND ONE BACKUP IS WORTH A THOUSAND TEARS.

- WORKS ON SYSTEMS WITH 2 OR MORE DRIVES
- CAN REPLACE YOUR EXISTING TRSDOS 1.2 OR 2.0 BACKUP UTILITY

MODEL II ONLY \$75.00

MODEL-II UTILITY PACKAGE

- ESSENTIAL FOR EVERY MOD-II OWNER
- RECOVER AND REPAIR FILES AND DIRECTORIES (BY JUST ENTERING A SINGLE COMMAND)
- XCOPY...SIMILAR TO COPY BUT CAN COPY ANY NUMBER OF FILES AT ONE TIME FASTER AND MORE ACCURATE THAN COPY SINCE RECORDS ARE COPIED IN GROUPS RATHER THAN ONE RECORDS AT A TIME USING XCOPY YOU CAN COPY FILES THAT CAN NOT BE COPIED USING THE COPY COMMAND
- SZAP...PROVIDES THE CAPABILITY TO READ AND MODIFY ANY SECTOR ON A DISKETTE
- XHIT CAN BE USED TO REPAIR A DISKETTE DIRECTORY
- DCS...DIRECTOR CATALOG SYSTEM IS A UTILITY FOR THE MANAGEMENT OF USER DISKETTES. SETS OF A MULTIPLE DISKETTE DIRECTORY FILE (WITH UP TO 1200 INDIVIDUAL FILE NAMES) ALLOWS SELECTIVELY LISTED OR PRINTED LISTS OF DIRECTORY FILES IN COMBINED SORTED ORDER (FOR EXAMPLE, LISTED ALPHABETICALLY BY DISKETTE, OR A COMPOSITE ALPHABETICAL LIST OF ALL YOUR DISKETTES)
- DEBUG-II ADDS SEVERAL FEATURES TO THE PRESENT TRSDOS DEBUG UTILITY INCLUDING SINGLE INSTRUCTION CYCLE, AUTO (LOOP) BREAKPOINTS, SUBROUTINE CALLING, BREAK-KEY DETECTION AND MANY OTHERS

MODEL-II ONLY \$150.00

MODEL-II DEVELOPMENT SYSTEM

- THIS PACKAGE IS A MUST FOR ASSEMBLY LANGUAGE PROGRAMMERS
- INCLUDES THE MICROSOFT EDITOR/ASSEMBLER PLUS WITH ENHANCEMENTS FOR THE MODEL-II
- A COMPLETE DISASSEMBLER
- SUPERZAP FOR READING AND MODIFY ANY SELECTOR ON A DISKETTE

MODEL-II ONLY \$125.00

MOD-II BASIC CROSS REFERENCE UTILITY

- LIST OR PRINT A SORTED CROSS REFERENCE TO ALL NUMBERS OR VARIABLES WITHIN A PROGRAM
- LIST OF PRINT ALL LINE NUMBERS CONTAINING A SPECIFIED STRING OF CHARACTERS

MODEL-II ONLY \$50.00

Buyer's Guide to Utilities

Utilities are a programmer's best friend. They can recover blown disks, make coding your program simpler, build versatility into a program, let you review and alter disk and tape files, and even let you improve your program's appearance.

Many different types of utilities exist

and each type has its own options. This buyer's guide will help you determine which utilities you need and suggests some options you might find handy.

Assemblers

An assembler is an indispensable utility for the machine-code programmer.

Programs written in machine code have to incorporate operation codes (op-codes), commands written in machine language. In a machine-language program listing, these commands are represented by a number.

For instance, to load the stack pointer register with the number 7000 hex,

Assemblers									
Company Name	Product Name	Price	For Model(s)	Minimum RAM	Cassette or Disk	DOS(es) Supported	Separate Documentation	Back-up Possible	
Computer Applications	T-ZAL	\$49.95	III	16K	C	All	Y	Y

N = NEWDOS
T = TRSDOS
Y = Yes

your program would stipulate the Z80 hexadecimal opcode for this procedure, 31. But you also have to indicate the address location with the opcode, here 7000 hex. The Z80 microprocessor requires that addresses be back-to-front. So, the machine code would appear in the program like this: 31 00 70. For a single command, this is a fairly simple procedure. But when you write a program with hundreds of commands, imagine the chance for error. A misplaced number here, an inadvertent deletion there—it could turn into a tortuous experience.

This is where an assembler comes in handy. Assemblers let you specify a mnemonic command followed by the address. For example, LD SP,7000H loads the stack pointer with 7000 hex. The assembler takes this code (known as the source program) and assembles it into the appropriate machine code (the object program), now ready for the microprocessor. The object code is stored

either in dynamic memory or on disk.

Assemblers perform other important functions. For one thing, they keep track of jumps in machine code. Say you hand-assembled a program with a command to jump to an opcode 10 bytes ahead. If you insert any code between the jump instruction and the jump destination, the microprocessor must take into account the inserted bytes to produce the appropriate jump. The assembler does this with labels. Signal the assembler that you want to jump to a specific, labeled opcode and the assembler inserts the correct number of bytes to do so.

Some assemblers, called conditional assemblers, let you skip over part of your source code under certain conditions. This is also done with labels, labels that stop the assembler's translation of the source code to object code for specified program lines.

To do this, set a label to a value somewhere in your source code. Then have

the assembler test that label and either produce machine code from the source code or ignore the source code. This feature lets you produce two or more versions of the same machine-code program without having to write more than one source code.

Another type of assembler, called a macro assembler, lets you use macro instructions, sets of machine-code instructions defined within the body of the source program. Assign a name to a given set of frequently used instructions. Every time you want to use those instructions, call them by their assigned name. Coupled with conditional assembly, macro assembly gives your program powerful versatility.

Disassemblers

As their name suggests, disassemblers do the opposite of assemblers. Where an assembler turns mnemonic opcodes into hexadecimal object code, a disassembler translates the object code into mnemonic text. The resultant text can even contain labels automatically generated by the disassembler so that you can reassemble at any time.

A disassembler makes machine code easier to follow and understand. You can also disassemble a machine-code routine and alter it according to your needs. For instance, you may want to upgrade a program from tape to disk operation. With a disassembler, you could go into the program and change all the I/O routines from tape to disk.

Disk Zappers

These are a requirement for disk users. Disk zappers make most blown disks usable (though some disks may be destroyed beyond repair). In instances where a disk file is intact but cannot be accessed for some reason, a disk zapper recovers the disk.

Blown disks result from a number of causes. Dust, smoke particles, hair and other foreign matter can collect on the disk and prevent a blemish-free write. Unless you have automatic write-verification, you won't know there's a problem until you try to read the disk. A disk zap finds the bad sector and allows you to write over it with dummy information so the program loads. Although the program then has some garbage in it, it is easier to replace the garbage than have to rewrite the entire program.

Another common disk problem is power surges that occur during write operations, erasing part of a disk track. Since the sector no longer exists, it can't be repaired. You could use the disk by reformatting it, but that would mean

Warranty Information	Supports Macros	Conditional Assembly	Machine-Language Monitor	Object Code to RAM	Description

erasing every track and sector on the disk. Fortunately, utilities exist that reformat the disk without affecting recoverable data.

Perhaps the most common problem is accidentally killing files. This happens so frequently that some disk zappers do nothing but find the dead file directory

entry and restore it. This is done by altering a single bit on the disk utility and then restoring its entry in the directory hash index table (HIT). On many operating systems, the file itself remains intact after being killed, with only the directory entry being amended. Some disk zapper utilities provide the option

of completely restoring old files.

Editors

Text editors are used to enter and manipulate text files from the keyboard. They are basically stripped-down word processors. The best reason to use a text editor is that many com-

puter languages process their source input (the program to be compiled or assembled) from a file which has to be typed in initially. Text editors are an integral part of many language-development systems and the primary method of preparing input files. Like a word processor, a good editor moves, changes,

deletes, substitutes text and so on, and then saves it to a file for subsequent input to another program.

Screen editors are utilities offering distinct advantages over the line-editing process known to TRS-80 users. They allow cursor movement across the video screen without destroying any of the

Definitely *THE BEST* of the space games for the TRS-80[®] MOD I/III

★ 1, 2 or 3 SIMULTANEOUS players!

• Each piloting a separate space ship

★ Incredibly realistic graphics!

★ Fast arcade response!

★ Options individually selected!

• Meteors, • Blackhole Gravity
• Flying Saucers • Objects & Mines
• Jounce or Wrap-Around Screen
• Weapons: Missiles or Lasers

★ Difficulty options selectable!

• # of Saucers • Saucer Speed
• Space Ship Power • Gravity Force
• Meteor Speed • Fuel Supply
• Weapon Supply • Laser Length

★ Sophisticated ship controls!

• Variable thrust level • Rotation • Flip
• Fire left or right barrel • Hyperspace

★ Cooperative or Competitive!

• Numerous scoring options
• 1 player can fly 2 ships - 1 with each hand!

★ Alpha & Trisstick compatible ★ Sound

text the cursor passes over. Characters may be inserted, deleted or otherwise moved, and the altered line may be entered as if it were typed at an input prompt. Thus if you type a Print command with a misspelled file name, you would move the cursor to the error, cor-

rect the typo using the screen editor, and hit the enter key—much simpler than retyping the whole line and risking a new error. Screen editors can also provide options like direct entry of graphics characters or other characters not normally available from the keyboard.

Need More Serial Ports ?

- * Add a BTA smart multiport controller to your C.P.U.
- * The MODEL 524 expands a single RS232 port to four individual ports with port selection and baud rate controlled by user software.
- * Buffered inputs permit simultaneous operation increasing data exchange rate.
- * 62K spooler model also available.

Monitors

Monitors can be simple or sophisticated. They provide an interface between a machine-code program and the programmer. Unlike a Basic program (or any other interpreted language), a machine-code program executes directly on the microprocessor chip. Some method has to be found to prevent a program still in the evolution stages from crashing the system without leav-

"Monitors interface the machine-code program and the programmer."

ing a trace as to why. This is where the monitor program is a lifesaver.

Probably the most important function of a monitor is allowing the insertion of breakpoints within the code. Whenever such a breakpoint is encountered, the monitor regains control from the program being debugged. At this point you can check the status of registers in the microprocessor or bytes in RAM to ascertain whether your program is functioning as it should. The monitor allows subsequent resumption of the target program, ensuring that all registers are in the state they held at the time of the breakpoint.

All monitors permit displays or print-

outs in various formats, including hexadecimal, octal, decimal, ASCII, or symbolic (where symbols are displayed instead of values). These symbols are the mnemonics referred to in disassemblers. Some monitors offer a disassembler as an option. The data displayed or printed can be altered from the monitor and might affect the results of any resumed execution of the main program.

Another monitor option is single-stepped code, which allows execution of one opcode at a time. On many computers this is a hardware option, but it is not available on micros due to chip architecture.

Sorts are an invaluable feature of monitor utilities that save you from rewriting your own sort routine every time you need to rearrange data in a program. Many different sorting methods exist, each with their own selling point. Trade-offs are usually involved; one method may be quicker but take more space, another may use a small amount of RAM but take longer to sort.

Sorts operate on data already in RAM or on a disk file. Generally, if a file fits into memory, it's quicker to sort it there, losing no time transferring data back and forth between disks. If a file is too large for memory, a disk sort has to be performed, an occasion when a well-written, efficient sort routine is required to minimize the input/output overhead.

Depending on program design, a

good sort utility allows you to specify how your records are broken into fields. Once this is done, you designate by which field you want to sort. This field is known as the key field and might be a city field within an address data base.

Some sorts let you specify more than one key field, allowing sorting within sorting. A file containing the companies arranged by city would also arrange the companies alphabetically within those cities.

It's sometimes necessary to join two files and ascertain that the resultant file is in some kind of order. This calls for a special utility called sort-merge. There is a conspicuous absence of this type of utility for the TRS-80 user.

Warranty Information		Description
NA		Transfers Cobol source programs from the Model II to the Model III.
NA		Transfers Cobol source programs from the Model III to the Model II.
R		Basic editor with monitor.
R (C only)		Gives paged listings of Basic programs from disk.
R (C only)		Makes unlimited copies of Scripsit and VisiCalc.
R		A collection of utilities permitting paged listings, program packing, program comparisons, and copying protected programs.
R (C only)		Modifies Basic programs from disk to make listing difficult.
R		Basic editor; full cursor control, block functions, global command, search and replace.
R		Protects Basic programs from copying; cannot be unlocked with pirating software. One back-up free with registration.
R		Transfers machine-language tape programs to disk and vice versa.
R		Tests Level II ROMs and RAMs for bad bits; tests keyboard for dirty keys; tests data and address lines.
NA		Protects Basic programs from LIST and LLIST by unauthorized users.
R		Converts 8080 mnemonic assembler source files to Z80.
R		Transfers files from selected CP/M media to LDOS.
R		Lets you boot a double-density LDOS system disk.
R		Provides UNIX-like shell facilities for LDOS.
R		Enhances Disk Basic with selectable commands.
R		Single-track formatting program.
NA		Makes a 35/40-track disk bootable in an 80-track drive.
M		Facilitates automatic command/data entry from a predefined process list file from a Basic disk.
M		Copies files, reads and modifies sectors, analyzes the Hash Index Table and Gran Allocation Table plus other features.
R		Fortran callable subroutines providing access to Model II/12/16 serial channels for I/O.
R		Provides Fortran direct-cursor addressing capability.
R		Utility subroutines callable from Cobol provide enhanced disk, printer, and screen capabilities.
R		Information storage and retrieval system for unstructured data.
R		Information storage and retrieval system for unstructured data.
M		Reduces development time for Cobol programs.
R		Adds Help command to LDOS-513.

Continued from p. 141

true of data files in the Models I and III, it's not true of Basic or machine-code programs, and specialized utilities are required to copy system tapes and disks.

The block format found in other computers allows single blocks to be read and the tape stopped between each to allow that block to be copied to another tape. This isn't possible with the TRS-80 program tapes; information would be lost as there are no inter-block gaps. Basic data tapes are saved a block at a time, however. Disks can be copied in their entirety with one command, or one file at a time.

Some tape and disk utilities let you view the stored data so its layout can be seen encoded. This is especially useful when debugging a piece of software that outputs a tape or data file, since a bug can intervene and cause output to be different than anticipated. A few copy utilities also allow the tape data to be viewed; this allows you to change portions of the data before dumping a new version.

File Utilities

Some file utilities work like tape and disk utilities on a smaller scale, copying individual files between disks rather than the entire contents of a disk. Some read and write files between different formats, such as TRSDOS and IBM, and some merge several files (like chapters of a book) into one.

Others concern themselves with examining and manipulating the contents of a file. These usually give more detailed information—such as an expanded menu or catalog of the disk's contents—than the utilities provided with an operating system. Finally, some imitate the editing features of a DBMS, letting you sort, add, or remove fields.

Compressors/Renumberers

Compressors simply remove blanks from your program so that it compiles faster and therefore reduces processing time. Say you write a string array that uses only 56 of the 256 bytes available per Basic line. A compressor utility directs the processor over the 200 blanks and brings it to the next data line.

Renumberers should be the last utility you use in developing a program. Renumber utilities renumber the lines in a program. Instead of increments of 10 between lines, say, you might want increments of 20. Larger increments allow you to insert lines to enhance the program or install other features. A tested and neatly renumbered program listing is aesthetically pleasing. ■

DOSPLUS II

by Art Huston

Need a snazzy new operating system for your Model II, 12, or 16? DOSPLUS II and the Z80 give TRSDOS and CP/M a run for their money.

★★★★ ½

DOSPLUS II

Micro-Systems Software Inc.

4301-18 Oak Circle

Boca Raton, FL 33431

Powersoft Inc.

11500 Stemmons Freeway

Suite 125

Dallas, TX 74229

Model II, 12, 16

\$249.95

DOSPLUS II is a Model II/12/16 operating system from Micro-Systems Software and Powersoft. It runs in the Z80 mode (not the 68000), but for these

applications it sets a new standard in power and ease of use. TRSDOS and CP/M, move over.

The operating system is a joint collaboration of the Model I/III DOSPLUS programmers and Kim Watt (of Super Utility fame), so you know the bloodlines are good. Their stated goal was to create a powerful, easy-to-use, device-independent system with little or no sacrifice in speed. For the most part they have succeeded admirably. Along the way they added such goodies as hard disk support and an extra 4K of memory.

This review will give you an idea of how DOSPLUS II differs from TRSDOS; it does not document the entire

operating system. If you don't see a TRSDOS feature mentioned, don't assume that DOSPLUS II doesn't have it. It also points out command differences between the two that may give you trouble.

Model I/III programmers take note: By the time you read this, DOSPLUS 3.5 will be on the market. The prerelease versions we've seen at *80 Micro* are very similar to DOSPLUS II.

Getting Started

When I buy a complex operating system, I want to feel that no expense has been spared to document it. DOSPLUS II gives me this feeling. It comes in an attractive simulated-leather binder with five colored dividers for quick access to the major sections of the manual. The print is tack sharp. The manual leads you through the preliminary process of booting the disk and immediately making a backup.

The time and date commands are bypassed by pressing enter. I have some qualms with this, feeling that a business system should always maintain the date. What are nice, however, are the various ways in which you can enter these items. DOSPLUS II recognizes many different delimiters. You can correctly enter the date in the following ways and more: 6:27:83, 06:27:83, 06:27:1983, 6-27-83, 6 27 83 and 6.27.83. This versatility is evident in most of the commands.

The DEMO/TXT file runs the first time you boot the system. It leads you through the highlights of operation, while showing you examples of command syntax along the way.

The manual, however, states that at first boot-up you go into the DOS command mode. At this point Model 12 and 16 owners must type MOD16 to configure the drives. Failure to do so before the drive light goes out generates an error message and the disk is unreadable until the next reset. It is a simple process

Device #	Device	Default Name	Class
0	Keyboard	K1	Input
1	Display	DO	Output
2	Printer	PR	Output
3	Serial Port A	CA	Input or Output
4	Serial Port B	CB	Input or Output
5	User-defined	U1	User-defined

Table 1. List of Device Specs

RUN BASIC PROGRAMS AT SUPER SPEED WITH ZBASIC 2.2.

THE WORLDS FASTEST TRS-80 BASIC COMPILER from **SIMUTEK**

BELIEVE IT OR NOT WE'VE ADDED MORE NEW FEATURES to the ONLY INTERACTIVE BASIC COMPILER for the TRS-80!

1. Speed increases of 10-100 times are typical after compilation.
2. Compiled code can be RELOCATED to run anywhere in memory. Code is even ROMable!
3. ZBASIC 2.2 NOW SUPPORTS BOTH RANDOM and SEQUENTIAL DISK I/O.
4. ZBASIC 2.2 is now a super tool for business programmers: RANDOM ACCESS FILES, and PRINT USING statements are supported as well as a HIGH PRECISION MATH package (with no rounding problems).
5. Special BUILT-IN MACHINE LANGUAGE COMMANDS to increase program operation by as much as 1000 times! Special commands are implemented for fast memory searching (CPDR, CPCR), block memory moves (LDIR, LDDR), inputting and printing HEX numbers, inserting MACHINE LANGUAGE into COMPILED CODE, disabling and enabling interrupts, inverting memory, 16 bit PEEKs and POKEs, and stack control, debug and much more.
6. ZBASIC 2.2 compiles the ENTIRE PROGRAM into Z-80 machine language. (Not 8080 code or a combination of BASIC and machine language like some other compilers.) Clumsy LINKING LOADERS, and RUNTIME MODULES are not needed; ZBASIC 2.2 creates a ready to run MACHINE LANGUAGE program.
7. NO ROYALTIES imposed on registered ZBASIC owners.
8. Typical COMPILATION TIME is TWO SECONDS for a 4K program.
9. Use TRS-80 Basic to write ZBASIC programs!
10. Compile some existing programs with only minor changes. (BASIC programming experience is required.)
11. Fully compatible with both the Model I and the Model III. Mod I compiled programs work on a MODEL III, and vice-versa. ZBASIC works with NEWDOS-80, NEWDOS+, DOSPLUS, LDOS, MULTIDOS, ULTRADOS, TRSDOS etc. (Not TRSDOS Mod I double density)
12. BUILT-IN and much improved MUSIC and SOUND EFFECTS commands.
13. Improved CHAINING for disk users.
14. TIMES now available on DISK version. (Mod I only)
15. ZBASIC 2.2 now has an INPUT @ command (similar to PRINT @).
16. The TAB function will now tab 255 columns on a printer. (BASIC cannot tab past column 64.)
17. NEWDOS 80 2.0 USERS can use the CMD "dos command" function! (DOSPLUS may use name "dos command")
18. NEW and EASIER to use USER COMMANDS.
19. New math functions to calculate XOR and INTEGER REMAINDERS of a DIVISION
20. Logical STRING COMPARISONS are now supported.
21. The disk commands INSTR, MID\$, ASSIGNMENT are now supported on both DISK AND TAPE ZBASIC.
22. DEFSTR is now supported.
23. Eight disk files may be opened simultaneously; random, sequential or mixed.
24. LINE INPUT#, is now supported.
25. Invoke the compiler by simply hitting these two keys: "-"
26. NEW 60+ PAGE MANUAL WITH DESCRIPTIONS AND EXAMPLE.
27. ZBASIC 2.2 Comes with CMDFILE/CMD program from MISOSYS, to allow appending or merging compiled programs and machine language programs from tape or disk.

ZBASIC 2.2 DOES NOT SUPPORT THESE BASIC COMMANDS:

1. ATN, EXP, COS, SIN, LOG, TAN, and exponentiation. (However, subroutines are included in the manual for these functions.)
2. ERROR, ON ERROR GOTO, ERL, ERR RESUME.
3. No direct commands like AUTO, EDIT, LIST, LLIST ETC, although these commands may be used when writing programs.
4. Others NOT supported: CDBL, CINT, CSNG, DEFFN, FIX, FRE.
5. Normal CASSETTE I/O. (ZBASIC supports it's own SPECIAL CASSETTE I/O statements.)
6. SOME BASIC COMMANDS MAY DIFFER IN ZBASIC. For instance, END jumps to DOS READY, STOP jumps to BASIC READY etc.
7. MEMORY REQUIREMENTS: to approximate the largest BASIC program that can be compiled in your machine (at one time), enter BASIC and type: PRINT (MEM-6500)/2. Remember, you can merge compiled programs together to fill memory.

ZBASIC 2.2 SPEED COMPARISON DEMO

To help give you an idea how fast compiled programs are, we have included this demo program:

ZBASIC 2.2 DEMO PROGRAM

Time to compile and run complete program	: 0 MIN. 2 SEC.
BASIC Execution speed MOD 1, LEVEL II	: 7 MIN. 34 SEC.
ZBASIC Execution speed MOD 1, LEVEL II	: 0 MIN. 18 SEC.
BASIC Program size (WITHOUT VARIABLES)	: 895 BYTES
ZBASIC Program size (WITHOUT VARIABLES)	: 2733 BYTES

(Remember that the ZBASIC program includes an 1879 byte sub-routine package.) Program shown exactly as compiled and run in BASIC and ZBASIC.

```

TRS-80 is tm of Radio Shack, a Tandy Corp.

to disable DEMO/TXT (hold down enter after entering the time), but newcomers to the Model II/12/16 may have to call Micro-Systems or Power-soft for assistance.

Ease of Use

DOS commands and file names are recognized in both upper- and lower-case: stores/dat, STORES/DAT, and StORes/DaT are now the same file. In addition, many characters that were illegal in TRSDOS file names are legal with DOSPLUS II. The file names ACCT#S/DAT and ME&YOU/BAS are examples.

More than one command is allowed on a single line if they are separated with semicolons. For instance, DIR :0 ; FREE :0 ; DIR :1 ; FREE :1, displays directories and free-space maps on drives zero and 1.

Help commands are available for all of the LIB commands and are more complete than those in TRSDOS. Error messages are printed out rather than expressed as numbers. The back-up utility performs both format and backup, eliminating a tedious step.

DOSPLUS II, however, is not always user-friendly. In some instances it fails to provide a list of possible prompt

answers, an area where TRSDOS shines. The date and time prompts, for example, are just 'DATE : ' and 'TIME : '. When backup encounters a destination disk that is already formatted, it asks 'Diskette contains data, use or not?'. You are not told that Y, U (for use), and N are the correct responses. What's worse is that F is a correct response, too, meaning "Use it, but reformat it first".

Device independence, although a powerful tool, is also confusing. Devicespecs replace switches, so that DIR @PR replaces DIR (P) as a command to print the directory. The Dual command under TRSDOS sends data to both the screen and the printer. Under DOSPLUS the command is replaced by LINK @DO @PR. These commands are fairly easy to learn, but are confusing initially. In addition, some device-independent commands can 'hang' the system if used improperly (more on this later).

Device Independence

The flow of data in a device-independent system can be altered. A sample application is to send the RS-232 input to the printer, or the keyboard input to a disk file. Data is filtered so that

certain characters are changed before they reach their destination.

The system defines 16 devices, listed in Table 1. Each is referred to by a name (changeable using the Rename command). The class of a device determines whether it is used for input, output, or both.

Devices zero through seven are referred to as devicespecs, or system devices, while devices eight through 15 are drivespecs, or drive devices. They are preceded in the command line by @ and :, respectively. An example of this is DIR (from) :0 (to) @PR, which sends the directory to the printer (from and to are optional).

You define devices five through seven. This gives you the option of adding peripherals like a joystick, mouse, or plotter. Note that the proper software must be stored in memory by the Set command, and that the hardware may require modifications.

The system devices process data 1 byte at a time, making it possible to send individual bytes from one device to another. The drive devices process data one file at a time. You can send individual bytes from RS-232 port A to the printer, but you cannot send them to drive zero. You could, however, send

Big Al here.....Me and the boys got sick and tired of listening to all the excuses from my representatives about power problems on their computers. Being in the Book Business, this can get expensive...losing customer records of purchases and ~~payoffs~~ payables.

To remedy this and to keep our agents' heads above the water (so to speak) we got us a truckload of **MAYDAYS** from SUN RESEARCH.

Even at retail, they are a bargain...only \$325.00 for a 150 watt Uninterruptible Power Supply with voltage regulator and battery. Keeps our computer free of problems caused by brownouts and ~~rubouts~~ blackouts and other bad stuff on the line. And small enough to be moved in case you have to pack up and leave quickly.

So, buy a **MAYDAY**...if you know what's good for you.

HAVE THEY EVER ASKED Why You Bought A Computer?

--- INFO-SCAN WILL SHOW THEM WHY ---

Combines the Features of a Word Processor, Data Base Manager, and Information Retrieval and Display Facility.

Instantly recall and display information of any sort: sales leads; inventories; product data & prices; daily appointments & reminders; names & addresses; diaries; lesson plans & student lists; recipes; index magazine articles, music and program libraries. You create information files using a simple word-processing like entry method. A short key describes the record. Scan the keys on the screen, select one, press a button and the full record displays (or prints). Add, delete, change records in a snap. Written in machine language. Fully self-contained. Simple to operate, you don't need a Ph.D to use it! No programming or other technical knowledge required. 15 page manual.

INFOSCAN Model I/III 48K 1 Drive \$49.95

--- OR SHOW THEM STUNNING GRAPHICS ---

Add the professional touch to your programs. Create complex graphic and text screens effortlessly. Over 30 commands for screen manipulation. Built in 'HELP' facility. Enter 1-1/2 inch graphic letters with a single keystroke (48K required). Save completed screens as a BASIC subroutine, merge with your programs. Full screen displays instantly from your program with a single GOSUB. Do animation. Load existing screens to make changes. Scores of useful features. Written in Machine language. 26 page manual.

SCREEN ARTIST II Model I/III 32K 1 Drive \$32.95

them to a file on drive zero. This defines a third type of device, called a filespec. Filespecs process data 1 byte/one character at a time (COPY @KI KEY-INPUT/TXT:0), or one file at a time (COPY KEYINPUT/TXT:0 NEW-FILE/DAT:1).

Five keywords have been added, encompassing most of the device-independent capabilities. They are link, route, reset, filter and set. In addition, the other library commands have been made device-independent.

Link, Route, and Reset

Link connects two output devices to one another so that data going to one is simultaneously sent to the other. You can also link two input devices so that data requested from one can be supplied by the other.

The syntax is link (from) devicespec (to) channel. The devicespec must be one of the system devices (zero through seven); the channel must be byte-oriented (device zero through seven or a filespec). The system prevents you from taking the data from a file, or sending it to a disk. Link by itself displays the current link status of all the devices.

For example, LINK @DO @CA sends data slated for serial port A to the screen, letting you confirm that the ap-

propriate data is sent. LINK @PR PRINT/DAT stores all printer output on disk.

This command will not, however, prevent you from linking an input device to an output device or vice versa, the results of which are unpredictable. In this case, device independence gives you enough rope to hang yourself.

The Route command intercepts data going to a device and sends it elsewhere. Unlike link, the data go only to one device. The syntax is route (from) devicespec (to) channel. Like link, the devicespec must be a system device and the channel either a system device or filespec. Route by itself displays the current status of all the devices.

For example, ROUTE @PR @DO sends all printer data to the screen, and ROUTE @DO @CB intercepts data going to the screen and reroutes it to serial port B.

Reset cancels all linking and routing. The syntax is either reset, which resets all devices, or reset devicespec, which cancels an individual device. Resetting an individual device is also accomplished by linking and routing it to itself (LINK @DO @DO; ROUTE @DO @DO).

Filter

Filter is a powerful tool that captures

characters and changes them before they proceed to another device. The syntax is Filter (from) devicespec (to) filespec(on/off). The devicespec indicates which system device (zero through seven) is filtered; the filespec is the file denoting which characters are to be filtered; and the On/Off parameter enables and disables the filter.

Filter can also change your keyboard to the Dvorak configuration. This keyboard configuration, designed in the early 1900s to speed typing, never became popular (see *80 Micro*, December 1980, p. 66). Each character is trapped and assigned a new value before being processed. For instance, Q becomes D, W becomes V, and so on. A filter that does this is included on the DOS-PLUS disk.

DOSPLUS II also lets you customize a program to your printer's control codes. The characters that make one printer double-strike might put your printer into a graphics mode or worse. The Filter command lets you trap and change those characters.

Designing a filter file is easy once you decide which characters to trap, and how to change them. A filter-file format looks like this: trapchar = replace char. Trapped and replacement characters can be in ASCII itself or represented by ASCII values. For instance, A=a, 65=97, or 41H=61H are all equivalent. The Build command provides a simple method to write the file.

You can turn a filter file on and off. But regardless of its status, it steals a little memory from your program.

Set

Set installs driver programs for non-standard peripherals. Usually this is a printer that is not Centronics-compatible or a user-defined device (lightpens and so on). The syntax is Set devicespec (to) filespec.

The driver must be written in machine-language and stored on disk. This is one of the few areas where DOS-PLUS requires considerable programming expertise. Its advantage, however, is that it automatically installs the driver, patches it into the system, and protects it from being overwritten. When left to the programmer, these tasks take longer than writing the driver.

Set also restores a device after it has been killed. An example is SET @PR @PR.

Changes in Library Commands

Most library commands are now device-independent. As mentioned earlier,

;	List first line of program

COLOR COMPUTER SOFTWARE

COMPLETE YOUR WORD PROCESSOR

SPELL—RITE

THE Cassette Spelling Verifier

You've got the best word processor. Now complete your system with the best spelling verifier. Spell-Rite is a convenient, fast way to insure that all of your documents are letter perfect. Spell-Rite was designed specifically for cassette-based word processors. Like Yours!

Spell-Rite is easy to use, completely menu driven.

Spell-Rite is Fast! You can verify a 1000 word document in under 9 minutes - including cassette I/O.

Spell-Rite is complete. It comes with its own 10,000+ word dictionary which you can expand. Also included is a superb manual.

Spell-Rite works with any word processor that generates ASCII tape files, such as Color Scripsit, Super Color Writer and Telewriter 64. 32K of RAM and Extended Basic are required.

Cassettes and manual \$59.95

DISK BASIC AID

DISK BASIC
MADE BETTER

Your Color Disk Basic is one of the most powerful Basics on any computer. Add Disk Basic Aid and it also becomes one of the easiest to use! The Basic Aid package will make developing and entering Basic programs a snap. Here are just *SOME* of the great features Basic Aid contains.

- Full Screen Editing
- Automatic Line Numbering
- 2 Key entry of Basic keywords
- Cross Reference
- Automatic Key Repeat
- User definable keys

PLUS. Label support! This unique Basic Aid feature is a vast improvement in the Basic language. Label any line you want and use that label in all calls to that line. Forget about line numbers, just call routines by name like this:

"ON A GOTO ENTERCHECKS, PAYABLES, EXIT"

A real time saver. And for transportability Basic Aid will convert all labels to line numbers.

These and other great features make Basic Aid a 'must' for anyone who writes or modifies Basic programs. Basic Aid runs on 32K or 64K Disk systems. It comes with complete documentation and our new heavy duty keyboard overlay.

Disk Basic Aid \$49.95

SPECTRUM — STICK

Put the joy back into color computing with the Spectrum Stick. This heavy duty joystick gives you a true feel of control. And it comes with an extra long cable and power on/off LED.

DIR @PR sends the directory to the printer. DIR @CB sends the directory to serial port A, and DIR DIRFILE/DAT:3 sends it to a disk file. The commands CAT (file catalog, a short form of DIR), List, and LIB are similarly changed.

Commands previously file-oriented are now device-oriented. For instance, Kill now kills a device or drive as well as a file or group of files. If you KILL @PR, data sent to the printer simply disappears. If you KILL :3, data sent to drive three disappears. A subsequent request for data (DIR :3) evokes a 'Device not available' error.

If you Kill the keyboard, you hang the system, and nothing short of a physical reset recovers it.

Copy operates similarly. A device can now be copied to a device as long as both are byte-oriented (zero through seven or a file). You can COPY @K1 KEYINPUT/TXT, which saves the keyboard input to a file. The manual claims that COPY @K1 @PR turns the printer into a typewriter, but I couldn't get it to work.

A Copy is aborted by pressing the break key, but only after at least one character has been copied. If you copied from an input-only device, you

would hang the system. An example is COPY @DO @PR. Again the power of device independence is troublesome.

The Rename command now renames devices and drives as well as files. If you are a CP/M user, you might want to rename your drives A, B, C and D, thereby creating commands like DIR :B.

A few Library commands are dropped or replaced. The Again command is replaced by '/'. Move is replaced by a

wildcard option in Copy; Purge is replaced by a wildcard option in Kill. The Echo and Dual commands are gone, victims of device independence. The Receive command, which under TRS-DOS receives object code via the RS-232 port, is gone. There are a few other commands dropped or replaced.

Some Library commands have extra options under DOSPLUS. The Auto command is made unbreakable, so you

FINGER PRINT makes it easy to use all your printer's capability. Once installed, simply tap your printer's panel buttons to instantly select:

Compressed, Double Wide, Emphasized, Double-Strike printing or combinations. And if you have Grafrax-Plus, you can add Italics and Fine Print printing to the list. FINGER PRINT also lets you call for 8 lines per inch, Automatic Perforation Skipover and Left Margin Indent (which makes bound documents easier to read). FINGER PRINT features an exclusive no-print Buffer-Clear, too. All in all FINGER PRINT puts hundreds of possible print combinations at your fingertips!

FINGER PRINT is a plug-in module that installs in minutes without soldering. FINGER PRINT does not interfere with normal printer operation. FINGER PRINT is compatible with all Epson MX80 and MX100 printers...and it works with all computers, software, and interfaces.

\$59.95 WARRANTED FOR ONE FULL YEAR! Includes complete installation, operation instructions; control panel reference label.

Look for FINGER PRINT at your local computer dealer. For the dealer near you, or additional information, call (213) 914-5831. To order directly, call toll free: 800-835-2246, Ext. 441. MC/Visa and COD orders accepted (include \$1.50 s/h...CA residents add sales tax).

We make technology easy to live with.

Dept. MC, P.O. Box 929, Azusa, California 91702

IF YOU'RE GOING TO BE PICKY ABOUT AN OPERATING SYSTEM SEE WHICH WAS PICKED BEST.

The readers of 80 Micro were asked to select their favorite operating system for the TRS-80 Model I&III. LDOS, DOSPLUS, TRSDOS, MULTIDOS, WOBOS I and NEWDOS/80 were all on the ballot. They picked NEWDOS/80.

The editors of 80 Micro have also awarded their Hall of Fame Awards. From among every software package on the market, the editors picked only six that they felt made a lasting and significant contribution to the TRS-80 computer. NEWDOS/80 was one of the six.

Since we first introduced the NEWDOS operating system we've been stating its features, capabilities and advantages. Thank you 80 Micro readers and NEWDOS/80 users for supporting us.

Version 2.0 . . .

High Performance DOS

NEWDOS/80 Version 2.0 is our highest performance system yet. The versatility and sophistication of Version 2.0 includes features like:

- Double density support on the Model I

- Enhanced compatibility between Model I and III
- Triples directory size
- Dynamically merge in BASIC (also allows merging of non ASCII format files)
- Selective variable clearing
- Can display BASIC listings page by page
- Automatic repeat function key
- Routing for peripheral handling
- Enhanced disassembler
- Command chaining
- Superzap to scan files
- Fast sort function in BASIC

Hard Disk Support Now Available

- Support for Apparat's and Radio Shack's Model III hard disk (optional-available upon request for additional \$60)

These features make NEWDOS/80 one of the most powerful additions you can make to your system. And Apparat's commitment to support assures that you've purchased a superior product, both today and tomorrow. At just \$149.00 it could be the best investment you will make for your TRS-80.

For more information see your local computer store or contact Apparat, Inc., 4401 S. Tamarac Parkway, Denver, CO 80237, 303/741-1778.

TRS-80 and TRSDOS are registered trademarks of Tandy Corp., LDOS - Logical Systems, DOSPLUS - Micro Systems Software, MULTIDOS - Cosmopolitan Electronics, WOBOS I - Western Operations, NEWDOS/80 - Apparat.

✓ 40

cannot simply press break to get the DOS ready prompt. It can also be made invisible, so that you see only the results of the commands being executed, instead of the commands themselves. The DIR command can now alphabetically sort the directory before displaying it, and display files fitting a specified wildmask. A sample application takes a directory of all files with the extension /BAS and sorts them before printing them to the screen. The CAT command has the same options.

Copy has an option to copy without using all available memory, making it possible for a large machine-language program to not be overwritten. Forms lets you specify the spool buffer size.

Configuring the Floppy Drives

DOSPLUS II can be configured to use the original Model II drives or the newer, faster, double-sided Model 12 and 16 drives. In addition, you can custom configure the system to deal with almost any disk drive, from a single-density, 35-track, five-inch disk to a 12-megabyte hard disk. This makes DOSPLUS much more flexible than TRSDOS or CP/M, but increases the system's complexity.

The CONFIG command sets both the floppy- and hard-disk drive parameters. The syntax is: CONFIG drivespec (parameter, parameter,...), where drivespec is the drive being configured.

The floppy drive parameters include software write protect, motor on delay (used for the Model 12/16), head load delay, and step speed (the rate at which the drive moves between tracks). The density (single or double) and the number of sides (one or two) are set with the Format utility. The system also supports five- or eight-inch drives, although the hardware does not exist for attaching a five-inch drive to the Model II/12/16.

DOSPLUS II is configured for a Model II with four eight-inch drives and uses a slow step speed (30 milliseconds). Model II users with Radio Shack drives should change the step speed to 6 milliseconds.

The manual is confusing on the use of the head-load delay parameter, at one point stating that it's used with Radio Shack Model II drives and later reversing itself. Micro-Systems Software informed me that this parameter is necessary for the Model II Drive zero only.

Model 12/16 owners with standard Radio Shack drives must change the motor-on-delay to Y and can change the step speed to 3 milliseconds. This is made easy with the MOD16/CMD file

included on the disk. 80 Micro has tested this system on the Model 12 and it performed flawlessly.

The CONFIG command also changes the order in which your drives are scanned during a file search. This is useful if you are using hard disks and wish to search them before the floppies.

Configuring for Hard Disk

Hard disk drives are fully supported, and are usually referred to as drives four through seven. As shipped, these devices are set to NIL and must be turned on by setting them to themselves. For instance, SET :4 :4 enables drive 4.

The Rigid parameter of the CONFIG command informs the system that it is a hard disk. Both five- and eight-inch hard drives are supported in hardware and software. You can also indicate fixed or removable platters and software write-protection. You must specify the step, head count, and track size; these parameters are included in your hard-disk manual.

“DOSPLUS II can be configured to use the original Model II drives or the newer, faster, double-sided Model 12 and 16 drives.”

In addition, CONFIG partitions one physical hard disk drive into two or more logical drives. This is useful to double the directory size, thereby allowing for more, but shorter, files. Three parameters must be set to do this, and failure to set them correctly results in two logical drives accessing the same track, a disastrous situation.

The number of cylinders on a drive and the number of platters also have to be set when formatting the drives with the RFORMAT utility. If you format too many cylinders, you may invade the wrong logical drive and wreak havoc.

The instructions for using hard drives are scattered throughout the manual. The section on CONFIG gives you the actual parameters to set, while the technical section tells you how to use them most effectively. In addition, you are referred to the Set command to enable the drive, the RFORMAT command to format it, the SYSGEN command to make it an operating system disk, and

the System command to save the configuration to disk. At some point you must calculate the best values for all the hard disk parameters, being sure to use the disk effectively but not overlapping logical drives. This procedure is not for the faint-hearted.

The section on CONFIG does advise you on two configurations for the Radio Shack 8.4-megabyte drives, and Micro-Systems advised me that sample configurations for the new 12-megabyte units are on the way. The Do files, which initialize and configure the 8.4-megabyte drives, are included on the disk, but you must read the section on SYSGEN to realize this. If you miss this you'll have to type up to 13 commands, some of them quite long (four Sets, four CONFIG commands, four RFORMATs and one System command).

Using Different Configurations

The System command allows niceties like deleting the DOSPLUS II graphics display and Time and Date prompts at power up. In addition, a trace function displays the Z80 program counter in the upper right-hand corner of the screen. This is a godsend for the machine-language programmer who wants to know the memory address being executed. The alive function places a blinking graphics character in the upper right-hand corner, indicating that the interrupts are functioning and that the system is not “hung.”

The system (SAVE = file name) function is the most powerful feature of the DOSPLUS configuration system. It lets you save all of the system and CONFIG parameters, as well as the printer's forms setup, linking, filtering and routing, and device names.

In short, the current state of the system is saved to a /CMD file (MOD 16/CMD is an example). You can save as many of these files as you like, making it possible to configure your system for an endless number of situations.

For instance, if you do a lot of machine-language programming, you might save a file that turns on the trace function, protects 16K in high memory, and links the video to the printer so you have a printed record of the screen. If you want to use your system as a dumb terminal, set up the proper route and link parameters and save them in the file DUMB/CMD. The applications are endless.

Utilities

DOSPLUS II has 13 utilities to TRSDOS 2.0a's six. The added utilities

for the TRS-80 from Micro-Mega

The Original GREEN-SCREEN

The eye-pleasing Green-Screen fits over the front of your TRS-80 Video Display and gives you improved contrast with reduced glare. You get bright luminous green characters and graphics like those featured by more expensive CRT units.

Don't confuse the Original Green-Screen with a piece of thin film stuck to the face of your video tube, such as that advertised by others. The Original Green-Screen is mounted in a full frame perfectly matched to the color and texture of the TRS-80 Video Display. It is attached with adhesive strips which do not mar your unit in any way.

The full frame design of the Original Green-Screen "squares off" the face of your video display and greatly improves the overall appearance of your system.

(Specify whether for Model I or Model III)

NOW SUPPORTS ELECTRIC WEBSTER!

WILL CHANGE THE WAY
YOU THINK ABOUT YOUR TRS-80!

THE MOST POWERFUL WORD PROCESSOR AND ALL PURPOSE COMPUTER PROGRAM AVAILABLE FOR THE TRS-80.

LOOK AT ALL THESE FEATURES

1. INSERT characters, words, lines, paragraphs or other files.
2. DELETE characters, words, lines, paragraphs.
3. COLUMNS. CopyArt II can be instructed to print your text from one to six columns. Super easy to use! No complicated commands. Great for doing newsletters, magazine layouts etc. NO MORE CUT AND PASTE!
4. SORTING. Sort lines of text by any field. Sorts up to 650 items in less than 7 seconds. Sort indices, table of contents, names, words or whatever in descending or ascending order. Used with CopyArt's math function it is great for small inventories, Receivables, Payables etc.
5. Screen widths from 32-255 characters wide. Screen widths can be changed to allow formatting your text as you want.
6. MATH. Built in MATH function for doing calculations on columns or rows. Used with the SORT command, CopyArt II can do a small inventory of 200-300 items, or keep track of small receivables or payables, general ledgers or home financial reports. Super floating point precision up to 32 digits!
7. *GRAPHICS. CopyArt has a built in graphics program that allows inserting graphics within your text. Drawings, graphs, illustrations, cartoons etc. may be used within newsletters or company reports. Graphics commands include: Plot between points, Circles, Squares, Fill, Erase, Draw, Move, Pixel cursor controls and more.
8. *GRAPHIC CHARACTERS. CopyArt has a built in graphics character generator. Used for typesetting large letters from 3 to 25 times normal size! Yes, you can even print characters down the page as well as across. Black on white or white on black.
9. JUSTIFICATION is fully supported. *Proportional spaced justify is supported.
10. *SUPER or SUB-SCRIPT.
11. UNDERLINING.
12. BOLD-FACTING.
13. *CHANGE CHARACTER SIZE or PITCH within your document. Character size changes for dot matrix printers with capability. Pitch change for daisy wheel printers with capability.
14. HELP. Help is available for all the commands at the touch of a key while using the word processor. Super for training inexperienced secretaries. Great reminder for experienced people as well. MENU DRIVEN Help for over 45 commands.

include two disk-repair programs, a disk zapper, an editor/assembler, and a TRSDOS-to-DOSPLUS conversion program.

The old standbys Backup and Format are here, in addition to RFORMAT for formatting the hard drives. Backup only duplicates floppies; hard-disk backups are not possible. The manual suggests using the Copy command to copy files from a hard disk.

SYSGEN is familiar to Model I/III DOSPLUS users. It lets you make almost any disk an operating system disk. Specifically, it creates double-sided floppy system disks for Model 12/16 owners, and hard system disks for hard-disk owners. The utility is simple to use, and the instructions are explicit.

Two programs are included to repair disks that are damaged. They are DIRCHECK, which checks the directory for errors, and DIRFIX, which fixes them. These utilities require little or no knowledge of directory structure. They do not, however, fix unreadable sectors on the disk.

Directory failures are caused by operator errors or a bad disk, but they can also be caused by a faulty operating system. I encountered one directory error that DIRFIX fixed easily, but I could not blame it on the operator or a faulty disk. If this is due to a bug in DOSPLUS, then a patch should follow soon.

Diskzap is a disk zapper with seven options. You must use the Set option to inform Diskzap of the type of disk in each drive. The display option lets you display and modify sectors. Other options include fill sector with a specified byte, copy sector to sector, and verify sectors, which checks for unreadable portions of the disk. Used in the right hands, this zapper is a powerful tool for repairing blown disks.

The EDAS editor/assembler from Galactic Software is included free. Used in conjunction with the manual's technical section, it can write machine-language programs. Editing commands include search and replace. Assembly options include assembly to RAM, which allows you to execute newly created code, and immediate jump back to the EDAS. The original Galactic documentation is included.

TRSDOS Compatibility: CONV and SVCINT

The plethora of TRSDOS software for the Model II/12/16 makes TRSDOS compatibility a must for any new operating system. DOSPLUS II in-

cludes two utilities to make this possible.

The TRSDOS and DOSPLUS formats are different, making it impossible to read one with the other. The CONV utility, however, makes it possible to read TRSDOS 1.2 or 2.0 files and copy them to a DOSPLUS disk. Options include taking a directory of the TRSDOS disk and copying files back to TRSDOS. These two options are unique among DOS conversion programs.

The manual does not state the differences between the TRSDOS and DOSPLUS formats. Micro-Systems told me that DOSPLUS uses 30 sectors/track compared to TRSDOS' 25, yielding a 20 percent increase in disk space.

"Micro-Systems has informed me that future updates and releases will include TRSDOS Basic, making it possible for one-drive users to perform the patch."

The SVC calls (similar to ROM routines on the Model I/III) are mostly TRSDOS compatible, but some existing programs require full compatibility. The SVCINT utility provides this by intercepting certain routines in DOSPLUS and making them conform to TRSDOS. This is sufficient in most cases. In addition, patches are provided for the ST80III (a terminal program), Profile Plus (a data-base manager), and VisiCalc.

Other utilities include Draw, enabling you to use the screen as a graphics scratchpad, and Offset, allowing you to relocate machine language in memory. The MEMTEST and terminal programs are not found on DOSPLUS II, but they might function correctly once you transfer them from TRSDOS.

Enhancements to Basic

Rather than supply their own version of Basic, the DOSPLUS creators opted to transfer Basic from TRSDOS to DOSPLUS and then patch it. This is a simple, well-documented process, but requires at least two drives. It only

needs to be done once. The improvements to Basic include more editing commands, the ability to reference line numbers with labels, and an increase of 4K in user space.

Micro-Systems has informed me that future updates and releases will include TRSDOS Basic, making it possible for one-drive users to perform the patch.

Model I/III users are familiar with most of the edit commands. They include one-character abbreviations like '!' for System and 'E' for Edit. Table 2 provides a complete list.

Three utilities are called into Basic via SYSTEM "file name". REF/CMD finds all references to variables, line numbers, and keywords. The SR/CMD utility lets you search and replace strings.

The SORT/CMD utility is the most powerful sort utility to be included on any TRS-80 operating system. It sorts variable, integer, and single- and double-precision arrays of any length. In addition, you may sort up to 30 specified arrays. The first 10 are key arrays that determine the order in which something is sorted.

If two items in the first key array are equal, the sort goes to the second array, and so on. You can specify up to 20 tag arrays, which are along for the ride. When two elements of a key array are swapped, the corresponding elements in the tag array are also swapped.

The Name command is used under TRSDOS to rename disk files, but under DOSPLUS II it enables you to assign a name to a line number, and then reference it by that name. GOSUB 12560 can now read GOSUB SORT, or GOSUB GETKEY. Use the name statement in the line number you wish to reference, then GOTO and GOSUB it by name instead of number. Program Listing 1 is a sample application. Use the SYSTEM "RENAME" command to rename files under DOSPLUS II.

Name eliminates the need to memorize important line numbers and makes the code easy to read. I have a couple of reservations, however. The documentation states that you can place the Name label statement anywhere in the program line, but I found that it must be the first statement in the line. Program execution is slowed down, because the GOTO and GOSUB search routines must search the code instead of just the line numbers.

This speed reduction is greater when the referenced line is farther from the first line of the program. Table 3 shows sample timings for subroutines that are the 11th and 301st program lines. Program Listing 2 tests the GOSUB Exam-

NOW SUPPORTS ELECTRIC WEBSTER!

WILL CHANGE THE WAY
YOU THINK ABOUT
YOUR TRS-80!

MORE REASONS YOU SHOULD CONSIDER
MOVING UP TO OUR COMPREHENSIVE PROGRAM...

15. SUPER EASY TO LEARN editing features. Logical key choices.
16. Hyphenation
17. SPELLING checkers like the 74,000 word ScripsIt Dictionary work great with CopyArt II.
18. CHAINING. Chain files together to make books or manuals hundreds of pages long.
19. CENTERING.
20. HEADERS and FOOTERS. You can even put graphics within headers for super page layouts.
21. PAGE NUMBERING. Page numbers can appear at the top or bottom of the page.
22. DDS COMMANDS from within the editor. Kill files, check free space or get directories easily.
23. CUSTOMIZED PRINTER driver. Since your printer has features that other printers don't, CopyArt II will be supplied with the printer driver of your choice below. Each printer driver is custom made to provide you with commands for each of your printer's fine capabilities. If you have more than one printer, order other printer drivers for only \$19.95 each. Printer drivers are available for:
 - Radio Shack LP IV, V, VI, VII, VIII and Daisy Wheel II
 - Epson MX-80, MX-80/FT, MX-100 with or without graffrax.
 - Okidata Microline 80, 82a, 83a and 84
 - NEC 8023
 - Smith Corona Daisy Wheel TP-1
 - Brother Daisy Wheel
 - C-Itch Starwriters and Prowriters all 8S 10A, 1550
 - PMC Printer
 - Centronics 737, 739
 - Diablo 620

OTHERS COMING SOON. Call if you don't see your printer!

24. Unprotected diskette. Unlimited backups can be made.
25. MAILIST/MAILMERGE INCLUDED. CopyArt II comes with a mailist program that stores over 2,000 names on a MOD III diskette. These names can be sorted by any field and have a special field for your code. You can make PERSONALIZED FORM LETTERS that will take the following codes from the mailist and insert them in your text. FIELDS INCLUDE: Mr. or Ms., Last name, First name, Business name, City, State, up to 9 digit ZIP code and your own special 2 character code. ANY OF THESE fields can be inserted within your form letter wherever you want. You can print form letters or mailing labels to all the people on your list or to specific codes only. CopyArt makes it easy.

ple statement when it is the 11th line.

The improved editing features and DOSPLUS-to-TRSDOS conversion make DOSPLUS II a great way to develop commercial Basic programs for use under TRSDOS. This is made difficult, however, by the Name command. A program to convert back to the standard line-number referencing would solve this problem as well as the speed problem. Its absence is puzzling in a system as complete as this one.

DOSPLUS makes an extra 4,000 bytes available to Basic programs, as well as to applications programs like VisiCalc. This feature alone may make DOSPLUS worth the price.

The documentation only covers TRSDOS Basic enhancements. Programmers have to keep the Tandy manual by their side.

Documentation

The documentation is attractively packaged, and lengthy, but suffers from poor organization and is sometimes inaccurate.

The manual is organized into DOS operations, library commands, utilities, Basic, and technical information. Each section is separated by a blank

NOW SUPPORTS ELECTRIC WEBSTER!

CopyArt II

**WILL CHANGE THE WAY
YOU THINK ABOUT
YOUR TRS-80!**

26. **SIMPLE CURSOR** commands. Simply use the arrow keys to move your cursor around the text. The screen will scroll both vertically and horizontally. Shift arrows take you to the beginning or end instantly.
27. **HI-Resolution** graphics supported.
28. **COMPLETE MARGINS CONTROL.** You tell CopyArt II what margins you desire. You can even change margins within the same text. You may also have parts of your text with 2 columns, some with one etc. It's super easy to use.
29. **BASIC PROGRAMS** can be edited easily. CopyArt is really useful for inserting graphics within quoted strings to give your programs super animation without the hassle of calculating the CHR\$ of the graphics!
30. **VISCALC** files can be loaded into CopyArt II to be manipulated easily. Great when you want to accompany your Visicalc reports with written reports, GRAPHS and BOLOFACING etc. Visicalc reports up to 255 wide can be loaded.
31. **SPECIAL SCRIPSIT FILE LOADER.** Allows you to load your old Scripsit files without having to save them in ASCII. Copyart will also load Pencil files and other normal ASCII files.
32. Similar to Scripsit. If you have used Scripsit, you can use Copy Art in minutes.
33. **CONTROL CODES.** Lets you insert special printer control codes in your text. CODES between 0 and 255.
34. **BLOCK MOVE.** Simple and powerful block move. Lets you move paragraphs or lines of text around easily. No complicated marker settings required.
35. **FIND/REPLACE/REPEAT.** Lets you find a string of characters and replace them with any other string of characters up to 20,000 times! WILDCARD search also supported.
36. Professional Manual in easy to understand English. Copyart II requires a TRS-80 Model I or II, (or PMC-80 or LNW), 48k and 2 disk drives with Newdos-80, Ldos, Multidos, Dosplus or TRSDOS. Double density disk drives recommended for the Model I.

CopyArt II THIS PROGRAM DOES IT ALL!

(617) 568-8641

page and a colored tab, and begins with a list of the features covered. A table of contents lets you look up individual commands.

After this, however, the organization suffers. A software product of this complexity needs an index referencing all commands. In addition, the com-

mands within each section are listed alphabetically, instead of in logical order. For instance, device-independent commands like Link, Route, Set, and Reset are scattered among 34 other commands. The hard-disk and configuration commands like CONFIG, Set, SYSGEN, System, and RFORMAT are spread throughout the manual. Concepts like these are abstract enough without poor organization making comprehension harder.

The first four sections of the manual are thorough, but have some inaccuracies. At one point the manual states that DOSPLUS II does not maintain the system date as a file attribute, but I found that it does. One of the suggested device-independent uses for Copy does not work, nor does the Name command unless it is the first statement in a line.

The technical section is one of the best I have seen. Twenty-six pages are devoted to general system operation, while a whopping 91 pages document the SVC calls. In all, this section is 127 pages long. It makes DOSPLUS II an excellent package for software development.

Technical Support

Micro-Systems and Powersoft are established companies with good track records in customer support. Once you send in the registration card, you are notified of any system upgrades. Both companies provide customer support, so you can call one of two phone numbers (neither toll-free) or write to one of two addresses.

Both companies can be reached on CompuServe's MicroNet and Special Interest Group (SIG) menus. In addition, Micro-Systems publishes *The DOSPLUS Quarterly* with hints and tips on using their operating system.

The Micro-Systems/Powersoft team will soon send out an updated disk to registered owners fixing all known errors, including bugs in the CONV and Diskzap utilities. This version should be even more TRSDOS-compatible than the last one.

DOSPLUS II is the most powerful Z80 operating system available for the Model II/12/16. Its device-independence makes it a superb programming tool, as does its editor/ assembler and enhanced Basic. The documentation is thorough, though slightly disorganized. If you want more out of your II/12/16, try DOSPLUS II. ■

Better CoCo Graphics

by Wayne Thume

Photo 1

Photo 2

If your Color Computer screen can't handle detailed graphics, try this graphics editor.

I have written many graphics programs for my Color Computer, but until recently have had a hard time creating detailed graphics. I solved this problem by writing a graphics editor program designed for 32K computers.

My graphics program is simple in concept, but is a powerful utility. Drawings are created on the low-resolution screen and are then transferred to the 64-by-32-character area of the highest resolution screen. This is done with a For...Next loop that reads each point on the low-res screen and sets the identical pattern on the high-res screen.

The program consists mainly of two subroutines, one to locate an area of the high-res screen and one to edit the picture.

Before transferring the picture, an area is chosen in which to place the picture. The first subroutine positions the picture using the commands Get and Put. You will see a flashing rectangle

NEWSLETTER

INTRODUCING LAZYFONT . . . FOR FANCY TYPE FONTS AND GRAPHICS

Now users of the Lazy Writer Word Processing System can easily create and print type fonts and graphics, if they're using a dot matrix printer with bit plot graphics capability. LAZYFONT, the latest addition to the LAZY family, simply replaces the regular printer driver used with Lazy Writer. A few simple commands in text tell the program which fonts to use, and the fonts are pulled off disk when printing. All regular Lazy Writer printer commands can be used.

The LAZYFONT package includes a program for creating the fonts, which lets you draw characters on the screen, then save them to disk. You can draw any sort of character, including logos and pictures. A bonus for users who don't want to draw their own fonts is that you can use GEAP/DotWriter fonts with this program.

LAZYFONT is available from AlphaBit Communications for \$49.95. The present version works only with the Epson MX-80 or MX-100 with Graftrax or Graftrax Plus. Versions for other dot matrix printers will be available soon.

A FIRST IN PROPORTIONAL SPACING

Use any print wheel with Lazy Writer's new proportional spacing program for the Qume Sprint 5 or C. Itoh F10 Daisy Wheel printer. Even lets you make up your own spacing and impression table! Qume wheels come in different sequences (arrangement of characters on the spokes); Lazy Writer owners can use all nine proportional typefaces of the WPS sequence without special hardware.

This revolutionary product is available from AlphaBit Communications, Inc. for \$49.95. You're reading a sample now, printed with the TITLE typeface.

NOW DO FORM LETTERS WITH LAZY WRITER !

Many businesses do regular mailings to clients or potential customers. Personalized letters get more attention than "Dear Sir". Now users of the popular Lazy Writer Word Processing System can merge names from a mail list with their text, and have use of all the Lazy Writer printer commands. Smart features so new they don't have a name yet. LAZYMERGE is \$44.95.

THIS PAGE WAS NOT TYPESET

IT WAS PRINTED ENTIRELY WITH LAZY WRITER. IF YOUR WORD PROCESSOR CAN'T DO THIS, ISN'T IT TIME YOU GOT ONE THAT CAN?

ALPHABIT COMMUNICATIONS, INC. 13349 MICHIGAN AVE DEARBORN, MI 48126
(313) 581-2896

✓476

which is a 64-by-32 area of the high-res screen into which your picture will be placed. Move this area with the joystick until you have found the spot where you wish your picture to be placed, then press the joystick fire button and that portion of the screen is transferred to the low-res screen.

A picture is created by using arrow keys to move a flashing white dot around the screen, setting and resetting points where needed. As you draw the picture on the low-res screen, it is simultaneously transferred to the high-res screen. As your design takes shape, press the O key to see what your picture looks like on the high-res screen. When your picture is finished, press the O key to stop.

Your drawing is now on PMODE 4,1 with SCREEN 1,1. The colors for this mode are black and buff, but red and blue may also be created. In the low-res

*"Press the O key
to see what
your picture looks
like on the
high-res screen."*

picture you see vertical stripes on either side of the word "THE." These stripes, when transferred to the high-res screen, appear blue. To create the color red, reverse the stripes.

Two nice subroutines are available as you design your picture. If you press X, a text line appears at the top of the screen. This line provides the X and Y coordinates of the flashing dot on the high-res screen. If you press the B key, you see a line eight points long. By pressing the arrow keys, the line moves across the screen in intervals of eight and down the screen in intervals of one. This line represents the memory location or byte where the information is stored. If you press the X key, the text line appears giving you the memory location and the decimal value of this byte. This last subroutine may mean nothing to some of you but is very useful in working with memory areas of the graphics screen. To exit this subroutine, push the Q key and you return to the normal edit mode.

DTC 380Z

- 48K buffer for high speed throughput
- Diablo 1640/1650/630 software compatible
- Serial and parallel interfaces
- Serial baud rates to 19.2K
- Built in diagnostics & demo program.
- Four CPU's, no cables, belts, wheels or pulleys

- Letter quality daisy wheel printer
- 16 print styles, 96 char. wheel, IBM type ribbon
- Automatic bi-directional printing
- Proven reliability 100,000 printer mechanisms produced

- Up to 32 CPS print speed in typical applications
- Interconnecting cables for all major micro-computers
- Automatic proportional spacing
- Parallel 6K bytes per sec. transfer rate
- Optional extras: forms tractor, cut sheet feeder.

Another program option is the ability to transfer portions of the screen to other areas. When you exercise this option, a flashing square appears on the high-res screen. Using the joystick, move this square to the upper left-hand corner of the area you wish to transfer and press the fire button. A second square then appears. Move this square to the lower left-hand corner of the area you wish to transfer. (There is a limit as to how far this second square goes. Too little memory exists to transfer larger areas with this method of transfer.)

Once you mark this second area, a large flashing rectangle appears. This rectangle is the same size you marked off for transfer. Move this rectangle to your transfer destination and press the fire button. The transfer appears: Push any key to return to the menu.

*"I produced
my castle and dragon
in one evening."*

Once you create some of your own pictures, you may wish to save them. To do so, first break from the program and then load a cassette tape for recording. Next, type CSAVEM"SCREEN", 1536,7679.0, press enter and your picture is recorded. To get your picture back again, type CLOADM"SCREEN" and press enter. You may find after you load the program that the colors blue and red have reversed. To correct this you may have to push the reset key several times, checking the color of the screen each time, to get the colors normal.

This program is easily modified to develop a personalized graphics program. Graphics can be created quickly; I produced my castle and dragon in one evening. I added this program to one of my screen graphics programs to create a powerful utility. ■

Wayne Thume can be reached at R2,
Box 119, Trappe, MD 21673.

We don't care which computer you own. We'll help you get the most out of it.

**CompuServe puts
a world of information,
communications, and
entertainment at your
fingertips.**

CompuServe is the versatile, easy to use interactive videotex service designed especially for the personal computer user. It's dynamic, growing and changing daily to satisfy its subscribers' needs. It's an industry leader, created and managed by the same communications professionals who provide business information and network services to over one fourth of the FORTUNE 500 companies.

From current events to current assets, CompuServe offers a wealth of useful, profitable or just plain interesting information. Electronic magazines and national news wires plus worldwide weather, current movie reviews, electronic banking and shop at home services, and some of the most sophisticated financial information available are all offered to current subscribers.

From words to music. CompuServe offers a communications network that gives special

interest groups from hardware enthusiasts to computer composers a chance to get together. There's a bulletin board for selling, swapping, and personal notices and a CB simulator for real-time communications between subscribers. There's electronic mail, the fastest, surest, way to communicate with other users across the street or across the country, plus file retention and editing, and lots, lots more.

Fun and games are expected whenever computer users interact, and CompuServe has the best. Games you can play alone or with other CompuServe subscribers anywhere in the country. Classic puzzlers, sports and adventure games, and fantastic space games featuring MegaWars, the "ultimate computer conflict."

But, that's just the tip of the chip. CompuServe offers a menu of thousands of items that make subscribing educational, fun and sometimes downright profitable. If you'd like to know more about CompuServe, call toll free, 800-848-8199 to receive an illustrated guide to the CompuServe Information Service. A videotex service for you no matter which computer you own.

Assembly-Language Shortcuts

Part I

by Bob Bowker

Bowker introduces his series of articles with simple tricks and shortcuts to make writing Assembly-language programs an easier process.

I recently rewrote a disk-directory program that I coded two years ago. The awkwardness of that original prompted me to share some of what I've learned. I had to fit a program in a finite number of bytes—in a 1K

EPROM, for example, or in the SYS overlay area—so I devised some shortcuts; byte-saving is the mother of many inventions. I don't claim to be the author of all these tricks, however, just a collector.

We'll start with a simple one; the ROM subroutine at 0060H is one of the best-known among Assembly-language programmers. Load a count in the BC register pair, and call 0060H; a delay will occur, depending on the value in BC. For example, see Program Listing 1. In a standard Model I, this routine will cause a delay of 937.6 microseconds.

However, look at Program Listing 2. This routine will also cause a delay of 937.6 microseconds, and it's 2 bytes shorter. As long as your delays are under 1,175 μ s (B=0FFH), why not?

Again, and Again, and Again

DJNZ is a new command in the Z80; it doesn't exist in the instruction sets of the 8080 or its other ancestors. It allows you to loop through a section of code up to 256 times. To increase the number of loops, try Program Listing 3.

016400	00100	DELAY	LD	BC,0064H	;Delay length
CD6000	00110		CALL	0060H	;ROM's delay loop

Program Listing 1

0664	00100	DELAY	LD	B,0CCH	;Delay length
10FE	00110	LOOP	DJNZ	LOOP	

Program Listing 2

0E04	00100	PROG	LD	C,04H	;Counter = 4
06FF	00110	PROG1	LD	B,00H	;counter = 256
7E	00120	LOOP	LD	A,(HL)	;Get character
FE80	00130		CP	80H	;Is it a graphic?
3802	00140		JR	C,NEXT	;Go if not
3E2E	00150		LD	A,2EH	;Substitute a dot
CDxxxx	00160	NEXT	CALL	PRINTR	;Print it
23	00170		INC	HL	;Point to next one
10F3	00180		DJNZ	LOOP	;...and loop
0D	00190		DEC	C	;Count this one too
20EE	00200		JR	NZ,PROG1	;...and Keep going

Program Listing 3

The Key Box

**Model I and III
16K RAM
Editor/Assembler**

This routine is a crude screen-print program. The DJNZ causes 256 loops through the code, while lines 190-200 reset the DJNZ counter, the B register, four times. As long as PRINTR doesn't destroy the BC register pair, this routine takes care of all 1,024 bytes on the screen.

Simple Arithmetic

The ROM routines for arithmetic are there and are relatively easy to use. Often, however, there's no need to save and set up all the registers necessary to simply double a number, or multiply it by another number, provided you're sure the result won't overflow the registers you're using.

For example, Program Listing 4 doubles a number. Program Listing 5 gives a result five times that same number. It's just 4 bytes long! Remember that your starting number can't exceed 51, or the A register will overflow and the results will be unpredictable.

Multiplying by 10 takes only 1 more byte. (See Program Listing 6.) Remember that your starting number must now be 25 or less to avoid overflow. If you just can't stay under 255, but 65535 is high enough, use the HL register in-

stead of A above, and BC or DE instead of B. This is a few more bytes, but still shorter than using the ROM routines.

Keep the Flags Flying

Basic has the command ON... GOTO, and for a time I wrote routines that were hundreds of bytes long to do the same thing in machine language. It

"You can use the Set command to make a single byte into eight flags for eight different parameters. . ."

was some time before I found the commands Set, RES, and RRCA, and learned how to use flags to do the job.

You can use the Set command to make a single byte into eight flags for eight different parameters or events. If the parameter or event is to happen, assign 1 bit to it and set it. Once it's happened, RES the same bit and the flag is off.

The tricky part is checking the bits to see if they're on or off. You could always use "BIT x,A", but that command is 2 bytes long. RRCA, however, is only 1, and has the added advantage of setting things up for a conditional Call or Jump.

For example, if bit zero of the flag's byte is set, the RRCA command will rotate it into Carry flag, which is one of the conditionals. You can then "CALL C,xxxx" or "JP C,xxxx".

Suppose you have a program that can pass parameters in the command line, such as "XDIR ISP". In this case, you want to run a program called XDIR, and print out the list of all invisible and system file names. If HL points to the "ISP," calling the subroutine in Program Listing 7 will set flags for each of the parameters requested. When it comes time to execute these parameters, you can do it via Program Listing 8.

The RRCA concept is not limited to the A register; you can use any register you want, such as "RRC B" or "RRC C". You can also apply it to the contents of a RAM address using "RRC (HL)", and "RRC (IX+d)" or "RRC (IY+d)". You don't have to go right all the time either: RLCA duplicates RRCA, but to the left—ditto for

CONVERT YOUR SERIAL PRINTER TO PARALLEL CONVERT YOUR PARALLEL PRINTER TO SERIAL

The UPI serial printer interfaces allow an ASCII serial printer to be connected to the parallel printer port of the TRS-80 computers or any other computer which has a Centronics compatible parallel printer port.

Software compatibility problems which normally result when a serial printer is used are totally eliminated because, the computer "thinks" that a parallel printer has been connected. Special driver programs and changes to the operating system are not required with computers designed to work with a parallel printer.

The UPI interfaces are completely self contained and ready to use. A DB25 socket mates with the cable from your serial printer. The ribbon cable attaches to the parallel printer port of your computer. The UPI interfaces convert the output of your parallel printer port into serial data in both the RS232-C and 20 ma. loop formats. Switch selectable features include:

- Linefeed after Carriage Return
- Handshake polarity (RS232-C)
- Nulls after Carriage Return
- 7 or 8 Data Bits per word
- 1 or 2 Stop Bits per word
- Odd, Even, or, No Parity
- Baud rates 110 to 9600

UPI-2V8-6 for TRS-80 II & 16 with 6 ft. cable	\$159.95
Models for most other computers available at	\$159.95

NEW SERIAL TO PARALLEL INTERFACES

The SPC SERIAL to PARALLEL interfaces convert serial ASCII data into parallel format for use with Centronics type parallel printers. A DB25 socket accepts serial data from your computer. The 36 contact ribbon connector plugs into your parallel printer. Can be used to add a second parallel printer port to computers which reliably support both serial and parallel printers.

Switch selectable options include the following:

- 7 or 8 Data Bits per serial word
- Odd or Even parity for serial word
- Parity or No parity for serial word
- 1 or 2 Stop Bits per serial word
- 300, 600, 1200, 2400, or 4800 BAUD

SPC-1 as described above	\$89.95
SPC-CC with DIN plug and cable for the TRS-80 Color Computer	\$69.95

All prices U.S. funds. VISA, MASTER CARD, COD, Purchase Orders accepted from schools, major corporations, and government agencies. Shipping and Handling on U.S. orders \$4.00. Ten day return period. Ninety day warranty.

"RLC B", "RLC C", "RLC (HL)", and so on.

More Bits and Bytes

My early attempts at Assembly-language programming avoided entire

groups of Z80 instructions because I didn't understand them. I would write the longest routines to avoid using such commands as "AND 6DH" and "OR E". Eventually, I learned how to use the Boolean logical operators.

A real-estate broker friend asked me to write a data-base management program to file all the properties for sale or rent in his office. I managed to create a system, but was stumped for a time when he wanted cross-referenced printouts of all houses for sale with a den, pool, three bedrooms, and assumable mortgage for under \$50,000. All my attempts were too long and slow. Enter the Booleans.

Step one was to assign 2 bytes to store this information; using 1 bit at a time, I could define 16 attributes. The bit assignment worked this way: If the house had a fenced back yard, bit zero was set; if it had a pool, bit 1 was set; if it had a two-car garage, bit 2 was set, and so on. As each house was logged into the system, all that information was stored in shorthand in 2 bytes.

"Eventually, I learned how to use the Boolean logical operators."

When my friend wanted his listing, he answered a series of questions establishing the type of house he was looking for. The questions set the bits in the DE register pair according to the assignments I had made; when he was finished, the program ran the routine in Program Listing 9.

The "AND E" instruction in line 120 compares the byte in A, bit by bit, with the byte in E; if both bits are on, that bit in A is left on, but if either is off, that bit in A will be left off.

A to start with: 0101 1101
E to start with: 1101 1111
A after "AND E": 0101 1101

When the "AND E" is completed, A shows which bits match—which house attributes match the requested attributes. Next, that byte is compared to the original requested attributes in B, and if they match, you continue on to the second set; if not, you bail out and check the next house in the data base.

This method of checking attributes establishes a minimum; the house may very well have other attributes not requested, but at least it has all those requested. If an exact match is required in your application, try Program Listing 10. In this example, "XOR E" com-

Program Listing 8

Ammicro introduces the first letter quality printer for \$680 that can also be used as a typewriter.

The **MICROWRITER™** Daisy wheel printer.

There was a need for a low cost letter quality machine that would be suitable for use as an office typewriter, and as a computer printer. Ammicro met that need by combining the Microwriter parallel interface and the traditional Olivetti craftsmanship that was available in their Praxis machine.

With the Microwriter you can have the best of both worlds a letter quality printer, and a high quality office typewriter all in one machine, that sells for less than the cost of a good dot matrix printer!

It's not just printer or a typewriter that comes complete with a deluxe carrying case, but a feature-packed, lightweight machine that doubles as an office typewriter. This printer is a simple, low cost, reliable unit which can be utilized with word processing systems, microcomputers, personal computers, and small business systems. The Microwriter's low noise level and slim modern styling allow it to blend with any decor.

The Microwriter's print quality is identical to the finest office typewriters on the market. This machine is not only perfect for letters and manuscripts, but with its 165 character, 12 inch print width, the machine is perfect for letter quality budget spread sheets, price lists, data sheets, and forms.

The Microwriter can tab, rule single lines both vertical and horizontally, underline and print at 10, 12, or 15 characters per inch (switch selectable)! Its ten character memory for automatic error correction, lift off correction ribbon, and fixed or programmable page formats are a few of the many features that make it a perfect office typewriter. Microwriter not only handles letter and legal size sheet paper in widths up to 12 inches wide, but also handles fanfold paper.

There's a wide selection of 21 interchangeable daisy wheels available. And ribbon cassettes that just drop in.

Its operation as a computer printer is simple. Just load it up with paper and you are ready to go. Centronics compatible parallel output cables are currently available from stock for the following computers: IBM PERSONAL COMPUTER™, OSBORNE 1™, ZENITH Z-100™, BURROUGHS B-20™, Convergent Technologies models IWS & AWST™, TRS-80 MODEL I, II, III™, APPLE II™. . . custom cables also available by special order.

This machine creates a new standard by which all current low cost letter quality printers will follow. Ammicro's Microwriter is truly designed for the lifestyles of the 80's and for decades to come.

Why settle for just any printer when you can have a MICROWRITER. . . a fine letter quality typewriter for you and your computer.

The Microwriter is the only daisy wheel printer on the market for \$680. For more information, see your local computer dealer or contact Ammicro directly.

MICROWRITER is a trademark of Ammicro Corporation. PARAXIS 30 is a trademark of Olivetti.

compares A bit by bit with E, and each bit in A is turned on if it is on in either A or E to begin with, but not both. Thus if A and E are an exact match, the result should be zero:

A to start with: 0101 1101
E to start with: 0101 1101
A after "XOR E": 0000 0000

If A and E were not an exact match, the following would occur:

A to start with: 0101 1101
E to start with: 1101 1101
A after "XOR E": 1000 0000

The "OR A" instruction compares A with itself, bit by bit; if any bit in A is on, it remains on after the instruction is completed. If no bits are on, the instruction sets the Z flag. In the last example, the byte in A would fail the test for zero, and the program would branch to the NOPE code. Thus, the program prints out house listings only if the attributes match those requested exactly.

The Teaser

In the next article, I'll tackle the stack and share a few tricks I've learned. To whet your appetite: If your program has not reassigned the stack, and has not abused it (i.e., no values are left at the end, nor have you POPed too many off), you don't have to write JP 402DH as your last command. Before DOS passed control to your program, the address 402DH was placed on the stack; thus, RET will accomplish the same thing and save 2 bytes in the process. ■

FLEXPLUS DOS.....\$69.95

A powerful, easy-to-use disk operating system!

COLOR COSMIC INVADERS

***FREE* \$21.95 Value.**
on every FLEX+ DISK

Advantages of FLEXPLUS DOS

- Best price anywhere
- Wealth of existing software
- Easy start-up—just type "RUN FLEX+"
- Allows you to save RS compatible binary disk files from FLEXPLUS
- NO HARDWARE MODIFICATIONS NEEDED
- Warranty will not be voided—no need to open computer
- Most FLEX compatible software will run

FLEXPLUS.....\$69.96

for new F Boards

FLEXPLUS with Supercharger.....\$89.95

for E and F Boards

- Print Spooling—print while editing, assembling, etc.
- All FLEX compatible software will run including INTERRUPT DRIVEN SOFTWARE

E Board to F Board Conversion.....10.95

- Eliminates need for Supercharger. Simple Installation
- Full Instructions. Just remove two chips and plug in our prewired IC's
- Soldering of fine wire in a test point required.

ARCADE GAMES

ALL MACHINE LANGUAGE.....\$21.95 each

LANCER — Best JOUST type game — 32K
MS GOBBLER — Great MS PACMAN type game — 16K
WHIRLYBIRD RUN — Like SCRAMBLE — 16K
STORM ARROWS — TARG type game — 16K
ANDROID ATTACK — Like BERSERK — 16K
32K VERSION TALKS
SPACE RACE — Best OMEGA RACE type game — 16K

FLEXPLUS is a powerful, easy-to-use disk operating system. Spectral Associates has adapted TSC's FLEX to the best DOS completely compatible with Radio Shack software for use on the Color Computer. Eliminate the need for Radio Shack's TRS DOS — use FLEX PLUS with Editor, Assembler and have the options of a full range of utilities. FLEXPLUS works on the 32K Radio Shack disk system with 64K memory chips with a High Resolution multi-screen format that supports a 24 line by 51 character display! Also included are special enhancements to Radio Shack's Disk system when you are running FLEX with single or double sided, single or double density, 35, 40 and 80 track drives.

SUPERCHARGER \$39.95

Allows machine language access to all 64K RAM in a Series E PC board. No hardware mod-

13 TIMES FASTER THAN dBASE II™

If you bought your computer to save time, then you need SUPER, the most powerful database system you can use. Power is a combination of speed, ease of use and versatility. SUPER has them all.

FAST - To demonstrate SUPER's speed, ISA retained a professional dBASE programmer to benchmark SUPER vs. the acknowledged leader. A simple mailing list application was chosen to minimize dBASE programming cost. The results:

Task	SUPER Time	dBASE II Time
Set up/Program	5:20 min.	12:18:00 hrs.
Input 100 records	50:29 min.	1:27:50 hrs.
Sort & Print Labels	6:41 min.	4:18 min.
Totals	1:02:30 hrs.	13:50:08 hrs.

Notice that SUPER was faster at every task where *your time* is involved—and saving your time is probably the whole reason you bought a computer.

EASY TO USE - SUPER won because of its ease of use. Since it is menu-driven, office personnel can easily learn to use SUPER to set up their own applications, speeding and simplifying dozens of tasks without the need of programmer support.

VERSATILE - SUPER, unlike other business programs, doesn't dictate how to run your business. With SUPER the computer does what *you* want, when *you* want, the way *you* want it. *SUPER may be the only business program you'll ever need.* It can handle customer files, payables, receivables, depreciation, appointments, cost accounting, time charges, commissions, inventory, manufacturing control, and even matrix accounting systems!

SUPER PERFORMANCE AT A SUPER PRICE -

That SUPER beats the \$700 dBASE program may surprise you, but in terms of price vs. performance SUPER has no competitors. Among its features are: production input, data compression, multiple databases on line, transaction posting, file reformatting, stored arithmetic files, flexible report formats, hierarchical sort and multi-disk files for up to 131, 068 records. It can select by ranges, sub-strings, and field comparisons. It interfaces to word processors such as WordStar™, SuperSCRIPTSIT™, Model II/16 SCRIPTSIT™, and NEWSRIPT™. In fact SUPER has so many features that

it takes a six-page product description to cover them all. Write or call and we'll send you one.

SUPER is available for TRS-80™ Models I & III under NEWDOS™, LDOS™, and DOSPLUS; for TRS-80 Models II, III and 16 under TRSDOS™; and CP/M™ systems.

Prices: TRS-80 and Osborne versions	\$250.00
Other CP/M versions	\$295.00
Manual (Price applicable to purchase)	\$ 25.00
Now available for IBM-PC	\$250.00
MasterCard and VISA accepted.	

OTHER SOFTWARE

- **ManageMint™:** A PERT/CPM project management system compatible with SUPER. It includes scheduling, resource and financial management modules.
- **Sales Planning and Data Extraction System:** Improves hit rates while cutting costs.
- **Small, economical program packages** for accounting, business and office applications as well as utilities.

The Postman's Second Ring

by Jim Heid

The second version of Soft Sector Marketing's Postman mailing list helps you make your appointed rounds with even greater efficiency.

★ ★ ★ ★

Postman (Version 2), with Postwriter
Alger Software
Distributed by Soft Sector Marketing
P.O. Box 340
Garden City, MI 48135
Model I or III
Two disk drives
48K RAM
\$175

Field Information

Nine fields per record, names and lengths as follows:

Code: 10
 Last Name: 15
 First Name: 15
 Company: 26
 Address: 26
 City: 15
 State: 5
 Zip: 9
 Data 1: 2
 Data 2: 5

Field names and lengths cannot be changed by the user.

Sorting

Machine-language heap sort, one to ten keys
 Sort time, approximately .021 seconds per name

Data File Specifications

Maximum size limited only by free disk space
 Data Guard feature reconstructs mail list after a system crash
 User can transfer data between disks
 Hard-disk version available

Label Printing

Capable of printing up to six labels across
 Multiple search criteria allowed
 Two user-defined messages can be printed on each label
 Label size is user definable

Form Letter Generation

Capable of printing up to 255 letters per record
 Printing parameters are user definable
 Multiple search criteria allowed

Table 1. Postman Specifications

It's been said that the postman always rings twice. Soft Sector Marketing has just sounded the second bell with a new version of their Postman mailing list. You'll want to answer it if you're looking for a package that's fast and easy to use.

Postman has some impressive features (see Table 1). It comprises ten machine-language programs, one sample data file, an 87-page manual, and a padded three-ring binder.

The Postman Software

Two Postman program disks come with the package. One is a single-density disk for the Model I; the other is a double-density disk for the Model III. You must copy the programs in both versions to a system disk. The Model III disk contains a Do file that does the copying automatically.

Postman advertisements recommend DOSPLUS or LDOS, but the program is also compatible with most other TRS-80 disk operating systems. For Model I users, this list includes TRSDOS 2.3, NEWDOS80 Version 2.0, VTOS 3.0 and 4.0, LDOS 5.0.3, and DOSPLUS 3.3D and 3.4D.

For Model III users, TRSDOS 1.3, LDOS 5.1, DOSPLUS 3.4D and 4.0,

We can't keep it secret any longer

Data-Writer outperforms
Maxi-Manager.

Outperforms Aids-III.

Outperforms Profile III +.

Data-Writer is
more powerful,
more flexible, and
easier to use.

Data-Writer™

But you don't have to take our word for it. Here's what the critics said:

- **80-MICRO:** "Data-Writer seems to have good speed and bug-free performance. It has a great deal of flexibility and capacity, and the ability to restructure an existing data base to meet changing needs gives it a big boost. For Electric Pencil or Script fans, the capability of using an old favorite to maintain a mailing list or data base makes Data-Writer a winner."
- **COMPUTRONICS:** "Here's a program capable of outstanding performance in the preparation of any type of data base...without any previous computer software experience being required of the user. I recommend it without qualification."
- **80-US JOURNAL:** "The manual uses a learn-by-doing approach and is so effective that on the first try a complete and highly functional data base was set up. Reports and customized printouts can be generated in minutes."
- **COMPUERVE:** "What most distinguishes Data-Writer is that files can be created and maintained with an ordinary word processing program. The 80-page instruction manual is very well done and the whole system is easy to use."

Data-Writer is useful. Users around the world have discovered the power and flexibility of this extraordinary data base manager that works by itself or with a word processor. Data-Writer is used by managers in large corporations (Bechtel, Honeywell, Owens-Corning, Westinghouse, among others), by small manufacturers, universities, government agencies, agents, stockbrokers, doctors, lawyers, insurance police departments, churches, flower societies, stamp collectors, wine enthusiasts, software retailers, and many more.

Now Data-Writer is even more powerful, with new expanded features:

- 10,000-record capacity, and hard disk support
- 40 fields per record
- 240 characters per field with a word processor
- 45 characters per field with Data-Writer's ENTRY program
- Search for any record with 1 second access time
- Select records based on multiple selection criteria
- Add fields to restructure your data base

If you have form letters to send to a large group or a subset, if you maintain mailing lists, bibliographies, or inventories with reorder levels, if you want to report accounts payable or receivable, expenses, orders, or any other list of numbers with totals and subtotals, then you will find Data-Writer invaluable. You can even create a subset of a larger list (say, all estate-bottled red wines produced in Napa Valley, St. Emilion, and Barossa Valley in 1978, priced between \$8 and \$12, sorted in order of decreasing price). The possibilities are endless.

For the TRS-80 Models I, III (48K, 2 drives, lower case required), Data-Writer is available from software dealers or direct from Software Options Inc., 19 Rector Street, New York, NY 10006, (212) 785-8285. Toll-free order line: (800) 221-1624. Price \$145 (plus \$3 shipping and handling). NY State residents add sales tax. Visa/Mastercard accepted.

Dealer inquiries invited.

and NEWDOS80 Version 2 are all compatible. I tested the system using LDOS 5.1.2 on the Model I and III, and found the one minor incompatibility described below.

Using Postman

After you copy the Postman programs to a system disk, you use the system by typing POSTMAN at the DOS Ready prompt. You can protect any routines in high memory by typing POSTMAN (MEM = X), where X is the highest memory location that you want Postman to use. Postman honors the DOS HIGH\$ memory pointer, so if your high-memory routines set it, you do not need to specify a memory size.

When Postman executes, a title and copyright notice appear for a few seconds. Then the main menu slides in from the right side of the screen (see Fig. 1). This programming gimmick is interesting the first couple of times you use the system, but I tired of waiting for the menu to make its three-point landing every time I wanted to use a different Postman program.

Fortunately, pressing any key while Postman is loading overrides the menu's dramatic appearance and brings it to the screen immediately.

Your first step is to initialize a Postman data disk. To do this you select option six, "New Data Disk File Preparation," from the main menu. Postman asks you which drive contains a formatted data disk. The program does not let you select a nonexistent drive number.

Here I found Postman's only incompatibility with LDOS. If I enter an illegal drive number, the screen displays garbage for a few seconds before prompting me again. Apparently Post-

man cannot pick up the Illegal Drive Number error code from LDOS. While this bug does not cause the program to crash, it is an annoyance.

After you enter an appropriate drive number, Postman asks how many addresses you want to hold on the data disk. Most users will simply press the enter key, telling Postman to use all the free disk space. Postman then asks for a disk name, limited to 32 characters.

Finally, the disk is initialized and Postman indicates the maximum num-

ber of addresses allowed. A 40-track, single-density, LDOS-formatted data disk holds 742 records, and a 40-track, double-density disk also formatted under LDOS holds 1,348 records.

After readying a data disk, the program asks if you want to prepare another one. If you have more than two disk drives you might want to because a Postman data file artificially links disks. Postman searches all the drives in your system and connects their mail-list files together, forming what looks like one massive, continuous file. This feature makes Postman a natural for users with an especially large mailing list.

The data disk preparation program contains full error checking, and the program gives you several opportunities to abort the initialization process if, for example, you find that you've inserted the wrong data disk.

After you prepare as many data disks as you need, Postman's main menu slides in again from stage right. You begin entering names and addresses by selecting option one, "Address Data Manipulation."

The program then displays "LOAD-

ING Postedit" in the middle of the screen, an area used throughout Postman for error and status reporting. Every time a program loads, a boxed message appears. Any operator or system errors also appear there. Display formats are consistent and attractive.

Entering Data

The Postedit program is the workhorse of Postman. Using this program, you add, change, delete, print, search for, and view your mailing-list entries. The Postedit screen is shown in Fig. 2.

The top of the screen tells you how many records you have used and how many empty records remain. The center of the screen contains the fields that comprise one record. Each period represents a possible character, and the parenthesis at the end of each field denotes its length. The bottom of the screen contains Postedit's menu.

To add a new record to your list, choose the "Insert new label" option by pressing the I key. The periods disappear, a flashing block cursor appears at the first position of the Code field, and a summary of screen editor commands

appears at the bottom of the screen (see Fig. 3).

The arrow keys move the cursor within the fields; pressing enter tabs to the beginning of the next field. The remaining screen editor functions are delete character (shifted left-arrow key), delete to end of field (clear key or shifted clear key for LDOS/VTOS users), insert character (shifted right-arrow key), and apply the overlay contents (described below).

The screen editor is easy to use. The keyboard is fully debounced and keeps up with the fastest typists. You can also print the current record in label format by typing shift, down arrow (control), and the letter O.

The overlay is a time-saving feature. If you have a number of addresses that share common data—city, state, and zip code, for example—you can put the common data into an overlay. The contents of the overlay are then applied to every record by hitting two keys (control-V).

The Postedit menu contains an option to change the overlay. When you select it, a screen similar to the one in Fig. 3 appears, except that each field contains small graphics blocks to remind you that you are not entering label data.

After you type a complete record, there are two ways to exit the screen editor. Pressing the at key (@) stores the record on disk and clears the fields for another record. You use this method when entering more than one address record.

You use the other method when you are finished entering your list. Pressing shift and the at key brings a small menu to the bottom of the screen. From this menu you can write the current record and return to the Postedit menu, apply the overlay to the record, inspect the current overlay, or forget the current label and exit to the menu.

The overlay inspection option is interesting; when you hold down the I key, it displays the current contents of the overlay in the existing field positions. When you release the key, whatever was previously in each field pops back on the screen.

Some Postedit Options

You can select another of the options on the Postedit menu, "Edit current label," by pressing the E key. The cursor appears in the first position of the first field and the screen editor menu appears at the bottom of the screen.

At this point you can edit the record contents. The screen editor's functions

and commands are identical to those described above. This design consistency throughout Postman makes the system easy to learn and use.

You delete a record currently on the screen using the "Delete current label" option. When you press D, the bottom of the screen displays a message asking, "Do you REALLY want to delete this label?" Pressing Y deletes the label; pressing any other key returns you to the Postedit menu.

A minor bug surfaces here. If a label is not displayed on the screen and you press D, the message "CANNOT do that until a label is on the" appears. The word "screen" is left out of the message.

Searching: Quick, Fast, or Selective?

Three other Postedit options let you search for a particular label. Two of the options are called "fast search" and "quick search." The third, called the selective search, is described below.

All three options operate similarly: type in the information you want to look for, called search criteria, and the program looks through your mailing list and displays the records that contain matching information. The primary differences between the options are the amount of information you can search for and the search speed.

The quick search is the fastest of the three. It lets you jump to an approximate location in your mailing list and searches only the primary sort field of each record.

If you want to search for the last name Heid, for example, your list would first have to be sorted by last name. You would then enter the name HEID (or a portion of it) and the quick search positions the mailing-list file to the first record that begins with the letters HEID in the last-name field.

If your list does not contain any last names that begin with HEID, the quick search positions the file to the location where HEID would be if it existed (between HARRIS and HONUS, for example). Quick search is a convenient way to get in the ballpark.

Use the fast search when you want to search a field other than the primary sort field. It also has several options. To begin, type what you're looking for, called the search key, and press enter. Unlike the quick search, you must type the entire search key. (If you want to look for the name HEID, you have to type the full name; typing only HE won't work.)

The program then searches your list for a record with a matching field. If it finds one, it displays the record above a small menu. This menu lets you continue the search, print the record that was just found, enter a new search key, or return to the Postedit menu. If a matching record is not found, the program tells you and returns to the Postedit menu.

The third method, called the selective search, allows multiple search criteria. When you select it, a screen called the search mask appears. The search mask looks like the normal screen-editor display, except that each field contains a small white square in each character position. Like the overlay mask, this reminds you that you are not entering new records.

Before you can perform a selective search, you have to tell the search mask what you are looking for. This is done by typing each criterion into the mask as if you were typing a normal record.

Assume you want to search for the address of every person who lives in Peterborough, NH, whose last name starts with H, and whose Code field starts with the word "sales." You must

first edit the search mask until it looks like Fig. 4, then you conduct the search.

When the program finds a matching record, it appears with a small menu below it. The menu lets you continue the search, print the record just found, enter new search criteria, or return to the main menu.

If no matching record is found, the program displays a message and gives you the opportunity to conduct the search again, to change or clear the search mask, or to return to the main menu.

The selective search has two interesting and valuable features. First, it compares only the characters you enter in the search mask to the characters in the corresponding fields. If you want to search for every record with a zip code field beginning with the digits 152, you enter only those numbers in the search mask's zip code field. Similarly, a search mask with the letters JO in the first-name field selects records with first-name fields containing JOHN, JOANNE, and JONATHAN.

Second, you can enter search criteria using upper- or lowercase letters; Postman considers them identical when searching.

Printing Data

Postman prints mailing labels three ways: for a single record, for all the records, or for only those records that match certain criteria. The last method uses the search mask described above.

Using the printer setup menu, you can change the default values for the width and number of lines of each label, the width of your paper in number of labels, and the number of labels to print for each record.

You can also tell Postman what fields to print, where to print them, and whether to print your records in all uppercase letters or upper- and lowercase letters. Postman lets you print two comment lines on each label.

The label-printing portion of Postman is easy to use and error-free. Printer setup and label design are cumbersome in some mailing-list systems, but Postman's menus make the entire label-printing job simple, even for inexperienced computer operators.

You can print your name-and-address data in what Postman's manual calls a columnar data listing. This is a printout of the contents of each record.

You can change the default values for page length and margins, and specify which fields to print. You can also send hexadecimal codes to your printer to select any special print styles that it

might have.

Reliability

Postman has a trademarked feature called Data Guard. If your computer resets, crashes, or loses power while writing to a data disk, Postman automatically invokes a "reconstruction module" that rebuilds the mail-list index the next time you use it.

I tested this feature by entering 36 sample records and shutting off my computer during the disk write of the last record. When I restarted the system, the screen displayed a message saying that the program had invoked the reconstruction module. It gave me an opportunity to enter a new disk label in case the old one was scrambled, which it was.

The screen then displayed the message, "Index reconstruction in progress." A graphics display moved around the bottom of the screen to let me know that the computer was busy, and after a few minutes of disk activity, my mailing list was again complete.

Using Postwriter

Postwriter takes an existing file containing special "insert flags" and prints it, combining data from your mailing list with the contents of the file. Basic or any word processor that saves in ASCII format can create the file.

The purchase of Postwriter is optional (Postman costs \$125 without it), but I recommend it. If your mailing list application involves any type of form letter, you'll find it indispensable and as easy to learn and use as the rest of the Postman system.

Postwriter prints up to 255 copies for each record, right-justified or ragged right, on single sheets or continuous-feed paper. You can also specify other printing parameters, including page width, left margin, line length, page length, number of printed lines per page, and line spacing. Your letters can include two messages, each up to 63 characters long.

Postwriter's best feature is its ability to print letters for selected records. You can do this by filling out a select mask in the same way as the selective search, then instructing Postman to print letters for only those records.

The Postwriter search mask has an additional feature. If you enter a question mark in a given character position within a field, Postwriter doesn't compare that character position when searching. Entering H??D, for example, causes a match with HEID, HADD, and HERD. The question

Learn Successful Computerized Investing To Make Money In Any Stock Market & Gain Financial Freedom

If you want to increase your personal wealth while beating any stock market in the world at its own game, then the Wall Street TAP System with its outstanding programs merit your immediate and serious attention.

Stockline and Stock Stalker are finally available to help you build lifelong financial independence for yourself by unlocking the basic secrets of how to succeed in any American, Canadian or international stock market. Now, more and more market professionals who use technical analysis, are switching to this kind of software.

These two superior packages systematically compute stock and market data into graphic charts, displays and printouts that allow you to quickly evaluate

the quality, value and trend of any target stock moving in any market.

Both Stockline and Stock Stalker use the same reliable and proven appraisal techniques perfected by seasoned stock market specialists to pick their stocks. Offering unparalleled value-per-dollar features and simplicity of operation, they are designed exclusively for the home computer owner who seeks new, exciting ways to employ his hardware.

Easy to use, each program is self-documented, menu-driven, help desk supported, user-friendly, self-prompting with error trapping entry and batch updating. The accompanying operations manual is extensive, understandable and

comes complete with hardcopy samples

Configuration: Apple II with Applesoft ROM or Apple II Plus, TRS-80 Model I or III 48K, 1 disk drive.

Valuable Bonus Extra With Stockline & Stock Stalker Orders!

When you order Stockline or Stock Stalker you'll receive, FREE, a 6-month subscription to **Computer Investing News**. It's the up-to-the-minute newsletter that opens vaults of information on how to maximize your gains through computerized technical analysis investment software. Dealer Inquiries Welcome.

mark is called a wild-card character and it gives you even more flexibility when printing form letters.

You can divide one of the code fields so that each character position stands for a category. By assigning each letter a specific meaning, you could code a massive amount of information into each character position. Using the wild-card feature, you can then print letters for records that match certain categories.

Although Postwriter was not written by the same programmer who wrote the rest of the Postman system, its screen displays and menus look nearly identical. Its one annoyance is that the program only responds to uppercase letters in its menu selections. If you are typing in upper- and lowercase, you must hold down a shift key when making your selections.

The rest of the Postman system accepts either upper- or lowercase menu selections. Aside from this quirk, Postwriter is easy to use, error-free, and a natural extension of the Postman system.

Pigeon Holes Are for the Birds

Almost every software package has a flaw, and Postman's is its manual. It is poorly written, containing lines like,

"What FORMAT does is to fill the new diskette with little 'pigeon holes.'" (I kept wanting to feed them.)

The manual is also poorly organized. It goes off on tangents to explain concepts that should be introduced later, forcing the reader to perform mental GOSUBs and Returns in an attempt to follow the discussion.

Worst of all, the manual is incomplete. One of Postman's best features, the ability to apply a predefined overlay to every name-and-address record, is not even mentioned. Only by seeing the overlay options on the system's menus did I realize the feature existed.

To help you prepare a new data disk, the manual refers you to a chart in the back that indicates how many addresses fit on each disk. That chart doesn't exist.

Finally, the manual is unattractive and hard to read. Daisy-wheel printers are fine for letters, but not for documenting business software. The manual should have been typeset for greater legibility.

Is Postman for You?

Yes, if your application requires extensive searching capabilities, fast sorts, flexible print options, and mass storage.

Postman's ability to span disk drives and create what looks like one coherent file makes it ideal for owners of more than two disk drives. And for owners of hard disk drives, a special \$225 version of Postman puts you into the mailing-list management business.

Postman is not for you if your application requires saving a lot of other data along with each name and address. Postman's code fields hold only 17 characters combined. If you want to store additional information with each name and address, you should consider either a mailing list that allows more code fields or a data-base manager.

Postman is capable of maintaining and manipulating large mailing lists easily, quickly, and reliably. It requires little technical knowledge to use, and although it's poorly documented, the system is designed so well that learning it is simple.

The optional Postwriter program almost makes printing form letters fun and is a perfect companion to Postman. The Postman system is a quality software product. ■

Letter-Frequency Distribution—Cryptology, Part IV

by Karl Andreassen

Here's another article in the cryptology series. You'll learn how to use letter-frequency distributions to crack ciphertext.

Cryptanalysis is the art and science of finding plain language hidden in ciphers. In this article, the fourth in a continuing series (see the Anniversary, February and April issues of *80 Micro*), I will address letter-frequency distribution patterns in ciphertext and provide a

Model II program to help identify this pattern.

An analysis of common English text reveals a consistent, letter-frequency pattern known as the normal distribution of letters. The frequency with which letters appear in text is given

below, listed in descending order:

ETAONIRSHDLUCMPFYWGBVJKQXZ

Language in scholarly journals has a slightly different pattern, although the first few letters remain at the high-frequency end of the list. Professional specialty languages such as those used by attorneys, physicians, politicians and the military have distinctive letter-frequency distribution patterns.

An experienced cryptanalyst usually recognizes such patterns just as dialect experts pinpoint a person's geographical origin by listening closely to his speech inflections and words.

Figure 1 lists seven distributions from various texts. The last four lines demonstrate one use of the sampling feature included in the Program Listing, which lets you examine short portions of a longer ciphertext.

When you break down a single-stage substitution cipher to its letter frequencies and find it to be similar to the normal frequency pattern, you are ready to try a few letter substitutions. The pro-

gram in "The Art of Encoding and Decoding" (80 Micro, February 1983, p. 244) helps you solve ciphers.

This month's program reduces the labor of counting letter frequencies and displays the letter-frequency spread of an unknown ciphertext in both graphics and tabular form, on-screen and with hardcopy option. You are likely to refer to a particular ciphertext more than once, so the program saves the text on disk.

I enciphered a line of plaintext from a local newspaper using the program in "The Art of Encoding and Decoding."

I then entered the resulting ciphertext into the Program Listing in this article. The graph of Fig. 2 shows a characteristic profile for simple substitution ciphers. Letter-distribution profiles of various ciphertexts carry distinctive patterns, each becoming almost as familiar to a cryptanalyst as facial features of friends and relatives.

You may find the percentages listed in Table 1 helpful in working back from ciphertext to plain language (plaintext). You can learn more about the significance of this table and accompanying graphs in such notable books as Kahn's

The Codebreakers (Macmillan, 1967).

You can enter plaintext from many sources into this program to study text profiles and letter percentages and to familiarize yourself with known text patterns. If you first enter plaintext and then substitute ciphertext for that plaintext and compare hard-copy profile graphs, you will find them very close, even though the letter columns have changed. The descending-order graphs are identical.

This immediately shows you how the meaning of the language is preserved even though the spelling has undergone considerable crypto manipulation and, further, why substitution ciphers are relatively easy to crack.

As you become familiar with substitution ciphers, enter more complex ciphertext into the program to broaden your expertise. When you find a ciphertext that reveals an essentially flat letter-frequency profile, you have come across a deceptive random hash of letters, or a very tight cipher system.

If you enter a known random sample of more than 500 letters into the Program Listing and inspect the profile graph, the flatness of the profile reveals how close to true random your letters come. The larger the sample, the more nearly flat the profile.

The more letters you enter (up to the 1024 maximum), the taller your distribution graph. Text over 250 words causes the graph to scroll on the screen.

Put your TRS-80[®] in touch with IBM's universe

Now you can have full IBM communications capability through one of Innovative Data Technology's 1/2" magnetic tape peripherals.

Featuring industry-standard interfaces, rapid data transfer rates, full operating and command subsets and a wide selection of models and configurations, IDT's magnetic tape subsystems provide economical and reliable data/program interchange, 40M bytes of storage and 1 disc backup. All IDT subsystems come complete and include tape transport, formatter, intelligent controller, computer resident coupler, cables, documentation and software. But most importantly, they help put your system in touch with the IBM universe.

clipping off the top. You should make hard copies of these graphs and fold or roll the paper to print the entire graph. Enter the System "FORMS P=0, L=0" call when using letter-sized paper to keep the printer from spacing six lines when the ordinary page length is exceeded.

The Program

The variables used are listed in Table 2.

The menu, lines 70-200, offers three options: an X,Y graph listing letter frequencies of the input text (either plaintext or ciphertext) in alphabetical order; a table of letter-to-total percentages in descending order; followed by an optional graph, also in descending order, of letter frequencies; and an option to file the input text.

If you choose the first option, the resulting profile graph is followed by an option to construct the descending order percentage table and graph. If you choose the second, the descending order table and graph are run without the profile. Both menu selections are followed by a KEYB, READ option, which lets you enter text from either the keyboard or from a previously recorded file.

The INKEY\$ function in lines 490-610 accepts keyboard text entry with auto jump to file or count, if the total text runs more than 1024 letters. If it is less, touching the asterisk key diverts the program to the subroutine.

If you choose to work with filed copy, you can select any portion or all of the file. When the AS array is completed the KEYB-READ selection appears. Counting letters can take from

LOAD 80

**TO YOUR
RESCUE**

LET LOAD 80 AND COLOR LOAD 80 RESCUE YOU

In the dawn of the computer age programmers needed the patience of Job to manually keyboard all the major program listings from a single issue of 80 Micro.

Then **LOAD 80** burst onto the scene and exploded that practice. Today thousands of TRS-80* owners use **LOAD 80** cassettes and disks every month. These time-conscious computerists spend more time enjoying all the benefits of those 80 Micro programs.

And now **LOAD 80** comes to the rescue of color computerists with **COLOR LOAD 80**. You can enjoy the same benefits, the same **LOAD 80** quality, the same time-saving results, but in full color. And since the programs come directly from the pages of 80 Micro, the complete and detailed documentation is right there in the magazine, just like regular **LOAD 80**. **COLOR**

LOAD 80 will be issued every three months on cassette only. Order the June 1983 quarterly cassette (April 1983 to June 1983 issues) or the "Best of '82" cassette, containing programs from the 1982 issues of 80 MICRO.

Subscribe today to **LOAD 80** and save close to 30% on the single issue price (choose either monthly cassettes or disks). A subscription to **COLOR LOAD 80** is not available at this time.

Start enjoying all the benefits of the programs in 80 Micro without all the programming hassles. Fill out the attached order form and send it to **LOAD 80**, 80 Pine Street, Peterborough, NH 03458. Or call toll free and use your MasterCard, Visa, American Express.

1-800-258-5473

LOAD 80 disks are double-sided giving twice the storage for virtually the same cost. Single-drive users can simply flip the disk to read the other side. Equipped with TDOS (the DOSPLUS kernel) these disks contain their own BASIC and are ready to load on the Model I. Model III users must use the TRSDOS CONVERT utility. **LOAD 80** is simply the listings from 80 Micro; it will not run under all system configurations. Use the Key Boxes accompanying each article in 80 Micro as your guide. **LOAD 80** runs on the TRS-80 Model I and III computers only. **COLOR LOAD 80** runs on the TRS-80 Color Computer only. *TRS-80 and Color Computer are trademarks of Radio Shack, a division of Tandy Corp.

GAS ATTACK

Model I and III
SOUND

You are the mad inventor of a gas to destroy all living things. Yes, you've become a BAD GUY!! Isn't it nice for once? You've decided to completely destroy all life on our planet, and everything was going well until you tried to gas four dung beetles. They have grown to an enormous size and are now chasing YOU! Fortunately for you they now become stunned when gassed. So, now you are running from enraged dung beetles and gassing people, dogs and plants. If that isn't enough, there are pits to fall into, blocks to stop you and to make matters worse, a large deadly roll of tissue paper that periodically will chase you around the playing field. Just in case you get low on gas, there are gas canisters placed randomly in the area. Sound fast and furious? Well, it is! With sound and a vertically scrolling play field.

\$15.95 - 16K Cassette and 32K Disk

PLASMOID INVASION

Model I and III
SOUND

You must destroy four different attack waves of spinning and tumbling aliens to be refueled by the space station. If you run out of fuel the EARTH is doomed and all of your reserve ships will be destroyed. If you let one attack wave of the same ships go by you will move closer to the enemy times and fight a new group of the same ships and that hurts your fuel. Here's something new, the aliens have an advantage that you don't have. They have high speed lasers and you have an unlimited supply of slow photon torpedoes! There are 2 skill levels, safe and suicide mission! The action is incredibly fast and deadly. You might never make it past the first level and you start out with six ships! Fast action graphics and sound.

NEW CLOTH 8510A + NEC-8023A

DON'T LET THIS SIMPLE NAME FOOL YOU. CRAYON DELUXE is not a toy but a COMPLETE WORD/GRAPHICS PROCESSOR which offers complete versatility in creating custom letter-sets and graphics. Written in Z-80 Assembler it is fast, flexible and very easy to use. No program of this kind written in BASIC can compare to it. Computing the bit patterns for 760,320 bits per page of printing demands Z-80 Assembler. COMPARE + you won't get G.E.A. Ped

STANDARD FEATURES INCLUDE

1. Programmable Underlining, even create lined paper
2. Mix WIDE and regular sizes MID-LINE.
3. INVERT any part of the text e.g. MID-LINE.
4. SHORT LINE SEEKING for maximum speed. NO WAITING!!
5. Reversed Block Capitals Character Set.
6. FONTMAKER - A 15K Machine Language program which enables you to create your own custom fonts. STORE, RETRIEVE AND PRINT letters INSTANTANEOUSLY. Allows 3 1/2 coresident character sets in memory. PLUS a fast easy way to print sample LETTERS and SETS
7. Repeat printing capability without carriage advance even on graphic lines gives Typewriter Quality print.
8. Create 100, or any number of copies of High-Res MAIL LABELS or LETTERHEADS with easy hands off operation.
9. Complete FORMATTING CONTROLS within the text allow for multiple page printing without operator control.
10. The sharpest dot matrix print you've ever seen!!
11. Variable DOT Linespacing control for text documents.
12. Bit Masking allows creation of graphics and the graph paper simultaneously. Superimpose any background!!!
13. CREATE Block Graphics in any size and with every set.
14. Fine Line Drawing for creating real business forms.
15. Character sets may contain letters up to 40H x 127W.
16. Continuous WIDE printing in any font or style. Even allows for partial EXPANDED from this mode.

Requires Apple II+, IBM PC or TRS80 III (Trademarks of APPLE, IBM and Tandy Corp.)

Tips on Program Use

After using the program as a training aid or a refresher for recognition of ciphertext profiles, enter and save ciphertexts. Even though the tendency is to think you'll need only one run-through (and therefore don't need to save your work), you should save longer texts to reduce the work of running shorter excerpts from the text.

The more text you have to work with, the more likely you'll find a solution early. Short texts can produce misleading profiles, so if more than one message is available in what you believe is the same kind of cipher, enter as many of those short texts as possible.

Use this program in conjunction with that from "The Art of Encoding and Decoding" to form the beginning of your computer-assisted, crypto-lab aids.

Figure 4 is a rather long sample ciphertext; in practice it is better to keep a ciphertext as short as possible, although in cracking an unknown cipher you can thank the wordy originator for the longer sample. ■

Karl Andreassen can be reached at 24750 Chianti Road, Cloverdale, CA 95425.

ENB

Points to consider when choosing a data-base manager for TRS-80 Mod I/III ...

Data Access Method. ENB has *true* relational access. **Data Independence.** ENB has generalised data structures, no record-length constraints, variable length fields. No data redundancy. **Structure Extension.** Integrated data dictionary permits full editing (add/delete/update/rename) on set of SETS, set of ATTRIBUTES and set of REPORTS. **Data Integrity.** Commit points keep data-base consistent. **Capacity.** 64K distinct data items, spans up to 4 disk drives (or hard disk). **Interface.** Interactive menu-driven entry/display of data. High-level BASIC interface. Scripsit and Visicalc interfaces. **Documentation.** Inbuilt reports automatically document current data-base structure. 125 page manual. **Self-running tutorials.** **Requirements.** TRS-80 Mod I/III, 48K, at least one disk drive. Works with all DOS. Developed in England by Southern Software.

CA add 6%

Build an EPROM Programmer

by William Mahoney

Wouldn't it be convenient to have all your favorite programs put into ROM packs? Doing it yourself can save time and money.

Commercially marketed Color Computer programs come in small, plug-in plastic cartridges called ROM packs. Program instructions are permanently burned into the ROM chips within each package.

Alternatively, user-developed programs are saved on cassette tapes and loaded from the tape when desired, a time-consuming process. It would be easier to have often-used or favorite

programs stored in ROM packs for fast, easy loading.

Some companies will burn programs into ROM chips for you, but it's costly and inconvenient. And if a program bug shows up afterward, the pack has to be reprogrammed, an expensive proposition.

Users can incorporate their programs on ROM chips with an EPROM (erasable programmable read-only memory)

programmer. I designed an EPROM programmer for the 2716, 2732, 2532, 2764, and 2564 EPROM chips.

In addition to saving programs in ROM packs, you can replace Radio Shack's 8K ROM operating system with a 2564 chip programmed to suit your own operating system needs.

The EPROM programmer I designed is easy to build and should cost under \$85. All the parts are obtained either at Radio Shack or through mail-order advertisements found in most computer or electronics magazines.

Software

The driver program, written in Assembly language, is about 1,454 (decimal) bytes long and is relocatable, menu-driven, and self-prompting. Although somewhat long, the program features complete error-checking of all user responses and lets you break from any operation that takes longer than a few seconds to execute. It has been thoroughly tested and should be crash-resistant and bug-free.

Program Listing 1 is configured to reside in a 2716 EPROM as part of the programmer. The program has 17 vari-

THE PROGRAM W/MANUAL 79.95 • THE TECH MANUAL 14.95 • THE BOOK INSIDE SU+ 19.95

POWERDOT

A GRAPHICS BREAKTHROUGH! Now the ULTIMATE in graphics design and editing. PowerDOT is the state-of-the-art in HI-RES Dot Mappers. Unmatched in quality and features. PowerDOT allows the user to create TRUE HI-RES printouts on the EPSON (Graftrax or Graftrax+ req.), or the Cliche PROWRITER from Leading Edge without ANY hardware modifications! The program has the ability to create drawings several times larger than the computer screen. You are only limited by disk storage. Your screen is merely a "picture window" to a much larger drawing area. You define the picture size. You select the print mode: hi-res, lo-res, or ultra-res. A very versatile utility and truly ahead of its time. Only \$49.95.

POWERDRAW

A full screen graphics editor. PowerDRAW allows the user to draw directly to the screen utilizing cursor controlled movement. Graphics and text may be combined and saved directly to disk or tape, and recalled at a later time. The "SAVE" formats are: CONDENSED TOKENS, EDAS SOURCE, EDTASM SOURCE, BASIC DATA STATEMENTS, BASICS STRINGS, BASIC ARRAYS, and LOAD FILE FORMAT. The files may be run alone or merged into any type of program or application. Animation is also possible when screens are sequenced. Design custom forms, titles, pictures, and graphics for your applications. Received EXCELLENT reviews in INFOWORLD 6/82, 80-US 10/82, and 80-MICRO 10/82. Three printer drivers are included, and the program is JOYSTICK compatible. A GREAT value at only \$39.95.

POWERMAIL

The most powerful mailing system for the TRS80. Powermail is a highly sophisticated mass mailing system designed to run under all of the popular DOS's currently available for the Mod I or III. The program is written entirely in machine language for maximum operation speed, and occupies only 4k of the available RAM in your computer. There are no slow periods when Powermail is running. New features have been added to the program that others have always lacked. You now have the ability to keep track of mailings using the 24 flags that are incorporated into the Powermail program. The Powermail system will handle a file up to 8 megabytes, or 65,535 names, whichever is smaller. The program will run in as little as 32K and one disk drive, although 48K and 2 drives are desirable. The program will also sort the entire maximum file size and open up to 168 files simultaneously during the process. Only \$99.95

POWERDRIVER

New printer drivers for the new Radio Shack™ Superscript™. This new generation of custom printer drivers allows you to utilize all of SUPERSCRIPSHIT's features with your EPSON, PROWRITER and C.I.T.O.H F-10 STARWRITER printers. You can now utilize all of the printers custom features such as compressed, expanded and proportional print, underlining, boldface, superscripting, and sub-scripting. All drivers can be called from within SUPERSCRIPSHIT at "document open time." Order by printer designation as follows: Only \$29.95 each

POWERDRIVER E..... EPSON MX70/80/100

ables placed in memory locations \$0600-\$0619. The rest of memory (up to the stack) is available for the buffer.

If you have a 4K system, the programmer is somewhat complicated to use since you have only enough buffer

space to program a 2716 EPROM in a single pass. You can program larger EPROMs in segments of about 2K each. Since you probably won't be able to use an editor/assembler to enter the program, you need either a monitor or a

hex loader to enter the machine code from the listing.

Features

The program confirms whether the EPROM is blank, and displays any incorrect locations. You can also program from a master ROM, input data from the keyboard, and program as few or as many locations as you wish. After any program ROM operation, the programmed locations are automatically verified. Any incorrect locations are displayed on the screen.

The EPROM programmer recognizes three commands in addition to prompted responses: down arrow, up arrow, and menu (M-key).

When you enter addresses, the up-arrow key erases the address you're working on and lets you reenter it. The down-arrow key lets you skip the current entry and use the last value entered for that request.

When entering hex data for the input routine, the up-arrow key displays the previous buffer location. When the down-arrow key is used, the next buffer location is displayed.

The M command is recognized any time you enter hex data or addresses, as well as during the program ROM operation. Pressing M immediately returns you to the menu. Any time a verify operation fails, the program displays the address, fail data (data that was incorrect), expect data (data that should be there but isn't), and gives you the option of continuing the verification. Answering no to this prompt returns you to the menu. (The M command is not recognized in this case nor is it accepted during the too-brief verify and learn ROM operations.)

Operation

The EPROM programmer is straightforward and simple to use. With both the computer and the programmer turned off, plug the programmer connector into the computer ROM pack port. Turn the programmer and computer on. You should start by checking that your EPROM is blank.

First turn S1 off, insert the proper personality module, put the EPROM in the programmer socket, and then select the proper voltage programmer (VPP) level (25 or 21 volts) with S1.

Select option 1 (Verify Blank ROM) and give the appropriate start and stop addresses in hex; prefixes such as \$ or &H are unnecessary and will be rejected. If you enter an invalid character, the line is erased and you must reenter the address. If you enter an incorrect

MICRO MANAGEMENT SYSTEMS
TELEMARKET DEPT NO. 4
2803 THOMASVILLE RD E. • CAIRO, GA. 31728

number, press the up-arrow key and enter the correct number. To use the same address used in a previous operation, hit the down-arrow key and the program defaults to the previous number.

After entering the start and stop addresses, you are asked if you want to make any changes. Answer with a Y or N, or use the M command to return to the menu. The addresses you enter are checked; if the start address is greater than the stop address, the addresses are rejected.

Once you confirm that your EPROM

Fig. 1A. 2716 Program Timing

Fig. 1B. 2716 Read Timing

Fig. 2A. 2732 Program Timing

Fig. 2B. 2732 Read Timing

is blank, enter the data you want to program. If you use a master ROM (or EPROM), turn S1 off, put the master ROM in the programming socket, plug in the appropriate personality module, and turn S1 back on. Then select option 2, Learn ROM. You are asked to enter those addresses you wish to copy. The program reads the specified addresses, loads them into the buffer, and returns you to the menu.

If you are using a listing, select option 3 (Input Data) and enter the desired addresses. You are asked to enter hex data while the screen displays each address and its contents. If you don't want to change the contents of a location, the down-arrow key skips to the next location. Use the up-arrow key to revert to a previous location. The program does not let you step back beyond location zero. When you reach the stop address, you are returned to the menu. The rules of address entries apply to wrong or invalid entries as well.

After you enter the data, you are ready to program the EPROM. Turn switch S1 off, and put your blank EPROM back in the programming socket. Turn S1 back on and select option 4, Program ROM.

If you want to use the same start and stop addresses used previously, use the down-arrow key to answer address requests. After answering no to the change address question, the programming operation begins and the VPP LED comes on.

Programming takes about two minutes and 24 seconds for 16K; four minutes and 40 seconds for 32K; and nine minutes and seven seconds for 64K EPROMs. The EPROM is verified after the programming operation is finished, and then returns to the menu.

Long cassette tape programs can be put in EPROMs by using option 5, Move Buffer. CLOADM your program as you normally would. If necessary, add an offset address to put the program above \$0619 so it doesn't get partially overwritten by the EPROM programmer variables.

Type the command EXEC &HC000, and control passes to the programmer. Select option 5 and enter the first (start) address of your program. Stop addresses are not used, but you should still enter any number higher than the start address. Then, when you return to the menu, select option 4, Program ROM. This time, enter the EPROM start and stop addresses you want to use. Note that these are not the start and stop addresses of your program as it resides in the computer memory.

For example, assume you have a program that is 1232 decimal (\$4D0) bytes long that you want to program into the first 1232 locations of your EPROM. Assume also that, when loaded from tape, the program's start address is \$0F00 while the last address is \$13D0. When you run option 5, Move Buffer, enter 0F00 for the start and stop addresses. Under option 4, you would enter 0000 for the start address, and 04CF for the stop address. When programming from location 0000, stop addresses are always one number less than the length of the data because location 0000 is the first actual address.

EPROM Programming

Figures 1-5 are simplified timing diagrams of the EPROMs for which the programmer was designed. Figure 1A shows the essential timing requirements for programming a 2716 5-volt EPROM. This device requires a set of address lines, a set of data lines, an output enable (OE) signal, a chip enable/program (CE*/PGM) signal, and a VPP input. As shown, the address and data lines, as well as the OE* signal, must be valid and stable for a minimum of 2 μs (microseconds) before the programming signal (CE*/PGM) goes high. Additionally, the VPP line must be set to 25 V prior to pulsing the CE*/PGM signal.

After meeting these requirements, the CE*/PGM line pulses high for 45 ms (milliseconds) to 55 ms. After the CE*/PGM pulse goes low, the address, data, and OE* lines must remain valid and stable for at least 2 μs. The VPP line can remain high if another location is to be programmed. At this point the data present on the eight data lines is programmed into the location specified by the address lines.

To read the contents of a 2716 EPROM, you must follow the waveforms shown in Fig. 1B. The address lines must be valid and stable, and the CE*/PGM line has to be low for 450 ns (nanoseconds). The OE* line must be low for at least 120 ns. Once these conditions are met, the data output from the EPROM is valid and can be read. Data out remains valid until one of the input signals changes.

To program a 2732 EPROM (Fig. 2A), the VPP level is applied to the OE*/VPP pin instead of a separate pin, and the CE* signal must pulse from a high to a low during programming. In this case, the OE*/VPP line has to go to the VPP level (25 V) at least 2 μs prior to pulsing the CE* signal, and must remain at that level for at least 2 μs after

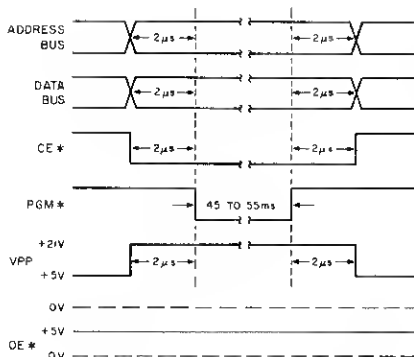

Fig. 3A. 2764 Program Timing

Fig. 3B. 2764 Read Timing

Fig. 4A. 2532 Programming Timing

Fig. 4B. 2532 Read Timing

Fig. 5A. 2564 Program Timing

CE* returns high. As with the 2716, CE* must be active for 45 ms to 55 ms. Read timing of the 2732 is identical to that of the 2716.

There are no dual function pins with the 2764. One important difference with

“You can construct a simple programmer which, with the use of personality modules, lets you program [all five EPROMs].”

the 2764 is that the VPP is $21 \pm .5$ V, as compared to the 25 ± 1 V maximum for the 2716 and 2732 chips. The CE* line must now go from high to low (Fig. 3A), and VPP must go to 25 V at least $2 \mu\text{s}$ prior to the programming pulse (PGM*). OE* should be high during the entire operation.

To read a 2764 EPROM, the OE* line must go from high to low 150 ns before data out is valid. In addition, the VPP and PGM* pins have to be pulled high to enable the read operation. All other read timing is the same as for the other EPROMs.

The 2532 EPROM has one less control line (Fig. 4A) than the other devices. The timing requirements for address and data lines remain the same, as does the programming pulse (PD/PGM*). Reading a 2532 is simply a matter of ap-

plying address signals and putting PD/PGM* low. Then, 450 ns later, valid data is available at the output pins.

Figure 5A shows that the 2564 EPROM has a few more control signals than the 2532. Address and data timing are once again unchanged, and the programming pulse (PD/PGM*) is identical to that of the 2532. VPP has its own pin, as in the 2764, but there are two additional select lines, CS1* and CS2*. These lines must be low for both programming and reading. Reading is done as in the 2532 except that the two select lines have to be held low during the entire read cycle.

With all the similarities between these five EPROMs, you can construct a simple programmer which, with the use of personality modules, lets you program all these devices. Personality modules let you connect each EPROM's control, programming, and upper address lines to the proper signal from the programmer.

Theory of Operation

The heart of the EPROM programmer is the 8255 PPI IC (programmable peripheral interface integrated circuit). The PPI provides three bidirectional ports and is nearly ideal for this application. The 8255 PPI has one control register and three basic operating modes.

In mode zero, the simplest of the three ports is programmed to be either an input or output register. Since the EPROM programmer needs only one bidirectional port, I programmed ports A and B as outputs only while port C is used for both read and write (programming) operations. The PPI uses two address lines (A0 and A1), a low true chip select (CS*) signal, a high true reset (RST), a low true read (R*) signal, and a low true write (W*) signal.

When the PPI is selected, address 00 selects port A, address 01 selects port B, and address 02 selects port C, while address 03 selects the control register. Writing \$89 to the control register makes ports A and B outputs, and makes port C an input used to read the EPROM. Writing \$80 to the control register makes all three ports outputs, and is used to program the EPROM.

I soon discovered that the timing relationship between the Color Computer R/W* signal and address lines is incompatible with the PPI. During a write cycle, the R/W* line of the Color Computer remains low for about 10 ns after the address lines change for the next instruction cycle. According to the 8255 specifications, the address lines should not change until 20 ns after the W* line

**150 Programs for
Business & Home
Just \$39.95
Model III Disk**

This just may be the Greatest Software Bargain ever offered! Imagine, over 150 high-quality, menu selectable programs for business and home, designed to showcase your computer with superb graphics and sound, priced **under \$40.00**.

These Easy-to-Use programs are supplied **ready-to-run** on a double density diskette, and come with an 85 page user's guide. The majority of the programs in this package are business oriented, and cover a wide range of topics including Graphs & Charts, Pricing & Profits, Real Estate Analysis, Investments, Loans, Leases, Amortizations, Depreciation, plus over 150 others.

You could easily pay over \$300.00 for these programs if bought individually, but if you act now, you can get this **complete software library**, for only \$39.95. This special introductory price is good only through July 30, 1983, so place your order today!

returns high. By reducing the amount of time that the R/W* signal from the computer is low, I programmed the PPI without difficulty.

I used a 74LS74 (IC A2, Fig. 7) flip-flop and the Color Computer Q clock signal to reduce the amount of time the R/W* signal is low during a write cycle. R/W* is connected to the set input while the Q clock is applied to the reset input of the flip-flop. The flip-flop Q output is used for the PPI R* signal, and the flip-flop Q* output is used for the PPI W* signal.

Using the 74LS74 flip-flop in this manner produces a W* pulse for the PPI that ends about 300 ns before the addresses change. There is no change in the R* signal (other than being inverted), but this is no problem since the critical part of a read operation is at the beginning of the cycle.

In Fig. 7, IC B2, a one-of-eight decoder, uses address lines A0-A2 and SCS* (spare chip select) to select the de-

sired function of the programmer. Unfortunately, the SCS* signal (Fig. 6) stays true, or low, for about 44 ns after the address lines change. This causes IC B2 to generate a pulse on whatever output is decoded from the new information on address lines A0-A2. This, in turn, causes spurious setting and resetting of the flip-flops used in the programmer. Using a 74121 (IC A3) one-shot reduces the SCS* width enough to avoid this problem.

By using SCS* with the programmer, I eliminated the need for any further decoding circuitry. SCS* is generated when address locations between \$FF40 and \$FF5F are selected. The EPROM programmer uses only addresses \$FF40 through \$FF47, but since other locations decoded by SCS* aren't addressed, this partial decoding causes no problems.

Gates B3-B, B3-C, and B3-D provide CS* to the PPI for addresses \$FF40-\$FF43, the PPI port and control

addresses. \$FF44 produces ROMEN* (ROM enable), while \$FF45 produces PLEN* (pulse enable—the programming pulse). VPPEN* (VPP voltage enable) is produced by address \$FF46, and RST* (reset) is generated by address \$FF47. Since the PPI requires a high true reset, E3-B inverts the low true RST* produced by IC B2. ROMEN*, when decoded, sets C2-A. The resulting low from pin 14 produces OE* for reading the 2716 and 2764 EPROMs. This same signal also provides a low by way of B3-A (PD/PGM* and CE*) to enable 2532, 2564, and 2732 EPROMs for reading.

IC C2-B, when set by VPPEN*, produces a low on pin 10. This low is inverted by E3-C, and turns on transistors Q1 and Q2. When Q1 and Q2 are on, the VPP programming voltage is available at the emitter of each transistor. Two separate VPP outputs are provided because the 2732 EPROM requires its OE*/VPP pin to be low for a read,

CALL 1-800-231-6667

MBIP STAND-ALONE PARALLEL PRINTER INTERFACE

32K Parallel.....	\$299.95
64K Parallel.....	\$349.95
64K Upgrades.....	\$179.95

Serial Versions Also Available

The MBIP in-line parallel interface works with almost any computer/printer combination utilizing a Centronics type parallel interface. Available with up to 256K of RAM for data buffering, the MBIP can accept very large files for buffering as fast as your computer can send it.

Most computers are able to send data to the printer at very high speeds, usually much faster than the printer can print it. The MBIP, placed between the computer and the printer, accepts this data as fast as the computer can send it, stores it in its own memory and then sends it on to the printer at the printer's own speed. Since the computer has now transmitted all of its data to the memory of the MBIP, the computer is now free to continue useful work while the MBIP dumps its memory to the slower printer. Under normal circumstances without a MBIP the computer could be tied up for hours on a large file being dumped into the printer costing you valuable time and money.

Using the MBIP's touch sensitive front panel controls, multiple copies of your document can be made without tying up the computer any further. The MBIP simply keeps dumping copies of your document from its memory until it has printed the amount of copies you have specified. Printing may be halted at any point and continued where it left off later. You can even turn your computer off and MBIP will continue until the print job is complete. Additional files may be transmitted to the MBIP for processing even while the MBIP is handling copies from a previous job.

The MBIP requires no user modifications of software and installs in seconds with virtually any computer (including TRS-80, ATARI, IBM-PC, APPLE, OSBORNE, NEC etc.) and any printer (including EPSON, CENTRONICS, NEC, C.I.T.O.H, IDS, ANADEx, OKIDATA, IBM PERSONAL etc.).

MBP-16K EPSON PARALLEL BUFFER 16,384 Byte Buffer

16K Epson 80/100.....	\$159.95
8K Serial Epson 80/100.....	\$159.95

The MBP-16K is an intelligent Centronics-Compatible parallel interface for the Epson MX-80, MX-80 F/T, and MX-100 printers, with 16,384 bytes of on-board RAM for data buffering.

The buffering capability of the MBP-16K increases your data processing efficiency by eliminating the wait normally experienced while printing. An Epson printer prints at 80 characters per second; at this speed it takes about five minutes to print a 16,000 character document. During most of this time the computer is waiting for Epson to finish one line so it can send the next. The computer can't do anything else because it's tied to the printer. By using the MBP-16K it takes the computer only *four seconds* to send a 16,000 character document. The Practical Peripherals MBP-16K interface typically accepts data as fast as the computer can send it, until full, returning use of the computer to you while it handles the printing. You can continue with other processing while simultaneously printing data from a previous job, gaining all the time you normally would have spent waiting for the printer to finish. The net result is to eliminate the computer-waiting-for-printer/printer-waiting-for-computer bottleneck, and keep both working. Any program that involves printed output will be speeded up by using the MBP-16K.

The MBP-16K supports all standard Epson Commands, is compatible with GRAFTRAX-80, and is plug compatible with the standard Epson cable. The MBP-16K does not require any user software for control.

The MBP-16K is easy to install — it simply plugs into the existing auxiliary interface connector inside the Epson without modification of the printer.

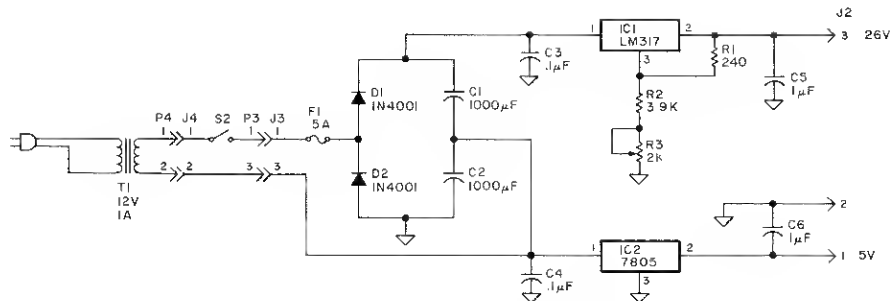

Fig. 8. Power Supply Schematic

Fig. 9. Programmer Parts Layout

with 25 V applied for programming. The other EPROMs require their VPP pins to be pulled high for a read.

When Q1 is turned off (Q1 and Q2 are always off when you aren't programming), the VPP input is slightly less than 5 V through D3 and R8. When Q2 is turned off, its emitter voltage is less than a volt due to the voltage divider consisting of R11 and R6. Diodes D3 and D4 provide isolation between the 5 V and 26 V power supplies. Capacitors C5 and C6 at the emitters of Q1 and Q2 reduce overshoot of VPP that could damage the EPROMs. LED2 (light emitting diode) indicates when the VPP programming voltage is applied to the EPROM.

IC C3 is a 556 dual timer used to provide the programming pulse for the EPROMs. Resistor R12 and capacitor C4 are selected to provide a 50 ms low-to-high pulse. This pulse is used directly for the 2716 (CE*/PGM), and is inverted for the 2764 (PGM*) by IC E3-A. This same inverted pulse is applied to the 2732, 2564, and 2532 (CE* and PD/PGM*) by way of B3-A. In addition, the inverted pulse is also applied to the Color Computer HALT* line which causes the computer to cease ex-

Fig. 10. Discrete Headers

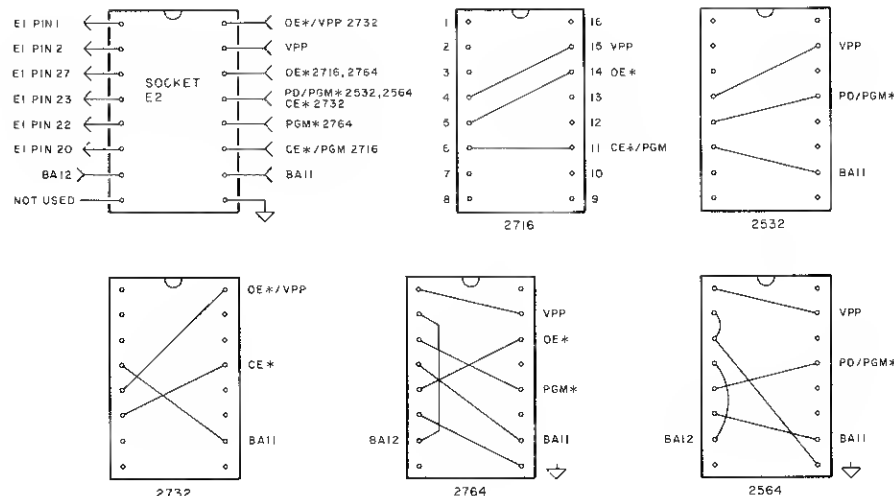

Fig. 11. Personality Modules

Using discrete components in this way creates a needed AND gate without having to add another IC.

E2 is an 18-pin socket used to hold the personality modules. Pins 1-7, 9, and 10 are outputs to the EPROM programming socket E1, while pins 11-16 are inputs from the control circuitry. IC C1 is a 2716 EPROM that contains the program to control the programmer. This EPROM uses CTS* (cartridge

select) from the computer, and is addressed starting at \$C000.

S1 removes VCC from the EPROM programming socket so the EPROMs can be removed and inserted without turning off the programmer. S1 also removes the 26 V supply from Q1 and Q2 to prevent an accidental application of VPP to the EPROM when VCC is off, and allows selection of the correct VPP level. Zener diode D5 reduces

cutting instructions until the HALT* line returns high.

R13 and C2 provide a power-on-reset function. D1, D2, and R3 provide an AND function to gate the power-on-reset and the decoded RST* for IC C2.

VPP to 21 V for the 2764 EPROM. LED1 turns on whenever VCC is applied to the EPROM programming socket. LED3 is the power-on indicator.

Power Supply

Figure 8 shows the power supply used for the EPROM programmer. T1 is a 12 V 1.0 A (ampere) wall plug transformer. D1, D2, C1, and C2 form a full-wave voltage doubler that produces approximately 34 V. A tap at the junction of C1 and C2 applies 15 V to a 7805 voltage regulator that generates 5 V. This 5 V supply powers all the logic used in the programmer. IC1 is an LM317 adjustable voltage regulator that uses resistors R1, R2, and variable resistor R3 to provide the necessary adjustment to obtain 26 V. Capacitors C3, C4, C5, and C6 provide transient (voltage spikes or noise) suppression for the regulator ICs.

Selecting Parts

The only component that might be difficult to find is the 40-pin male card-edge type connector. This connector mates with the Color Computer ROM-pack socket, and the only thing I could find in the mail-order catalogs was a 34-pin version used to make disk-drive extender cables. I finally found one at a local outlet after I had completed the project. If you cannot find such a connector, you can build one out of a 40-pin ribbon cable edge connector (Radio Shack catalog number 276-1558) and a small piece of two-sided PC (printed circuit) board stock.

All other parts are available from either Radio Shack or mail-order outlets. I purchased my chassis box from Radio Shack (catalog number 270-232), while my perfboard is a Vector 163677-6DP. This board has a set of power and ground buses, and is nice to use, if expensive. If you use this board, you should cut the buses away from a portion of one end to prevent shorting the 40-pin DIP header pins together.

You can also use plain perfboard and wire-wrap all power and ground connections. If you use this method I suggest you solder the bypass capacitors to wire-wrap pins or directly to the IC socket pins. The discrete AND gate parts and the 74121 timing components are installed the same way.

Building the Programmer

Using the top that comes with the chassis box as a pattern, trim your perfboard and drill four screw holes to fit the top of the box. Then install the IC sockets. Parts layout is not critical,

“Connectors make life easier if you have to remove the board for any reason.”

Fig. 12. Power Supply Layout

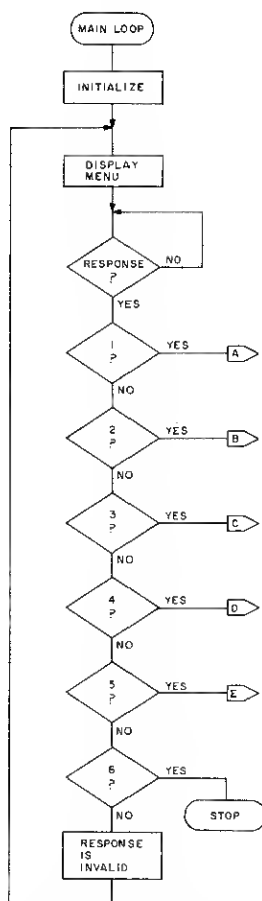

Fig. 13. Main Loop Flowchart

and you can use either my layout (shown in Fig. 9) or any layout convenient for you.

If you are using plain perfboard, a super-glue will hold the sockets and wire-wrap pins in place. Next, install the bypass capacitors, the discrete AND gate, the 74121 timing components, S1, and the three LEDs with their current-limiting resistors (R4, R7, R8). Mount pull-up resistors R5 and R2 as shown in Fig. 9.

Install the 40-pin wire-wrap DIP header as shown, noting the location of pin 1. As each wire-wrap is made, be sure to check it off on the diagram to avoid confusion. Connections to switch S1 are soldered, and the LED connections are either soldered or wire-wrapped using wire-wrap pins. When you finish wire-wrapping, use hookup wire and one of the 3-pin Molex connectors to make a three- to four-inch power supply cable. You should have a connection to ground, 5 V, and 26 V.

Next, assemble the discrete components on the DIP headers that plug into sockets D2 and D3. Refer to Fig. 10 for component placement. Solder these components as quickly as possible and use a low-wattage iron to avoid melting the headers. Pay special attention to mounting the two transistors to ensure that the leads don't touch each other. Now, using an ohmmeter, check your wiring against the schematic. Be sure that the ground and power buses are not shorted together, and that ground is connected to the correct pin on J1.

Personality Modules

Now is a good time to build the personality modules. These modules are simple 16-pin DIP headers with jumper wires soldered to the appropriate pins. Follow the pictorial in Fig. 11, and you should have no problems.

Power Supply Assembly

Next, the power supply is constructed on the 2¼-by-3¼ perfboard. I used a grid board from Radio Shack (catalog number 276-158), but plain perfboard will do. The power supply board is constructed by soldering each component to wire-wrap pins and then wire-wrapping the underside. Refer to Fig. 12 for the layout. I use two 3-pin Molex connectors to make connections to the power supply board. You can solder these connections directly to the board, but connectors make life easier if you have to remove the board for any reason.

The connector that brings 12 V ac (alternating current) onto the power

WORDS ARE NOT ENOUGH!

It's a real shame there's not a "terror" tense in the English language.

Then we could adequately describe **Asylum** and **Asylum II**, the ultimate adventure games from **ScreenPlay™**.

We'll give it a shot, though. Picture yourself in a fifteen-hundred cell nuthouse in which dwell the most bizarre collection of kooks this side of your local state college. These demented goons are kept in check — but just barely — by an evil gang of semi-human guards.

Your goal is survival — and freedom.

Asylum and **Asylum II** are two similar but distinct adventure games, totally implemented in lightning-fast machine language, featuring 3-D graphics. Hallways recode into the screen. Doors open and close. Beds, desks, and other inmates are drawn on the screen — **instantly**. No dull delays while the machine tries to figure out what to do next. No tiresome pauses for endless disk thrashing.

You don't talk in cryptic one- or two-word commands, so there's no reason a game should expect that of you. **Asylum** and **Asylum II** both support real-language input. Sentences like "DROP EVERYTHING ON THE DESK EXCEPT THE MATCHES" are interpreted and acted on **instantly**. Further, the command "VOCABULARY" will show you the entire lexical dictionary, eliminating the need to second-guess program designers you've never met.

Asylum and Asylum II.

They'll leave you speechless.

Photo 2. Interior View

supply board uses only two pins, while the connector supplying power to the programmer board uses all three pins. To avoid plugging the cables into the wrong place, make one of the connectors on the power supply board a male connector and the other a female connector. Since the pin spacing does not exactly match the grid spacing on the board, you must slightly squeeze together or stretch apart the solder tails to get them to fit. If your Molex pins are the crimp-on style, you can use 1/4-inch bare hookup wire crimped or soldered into each pin as a solder tail. Use epoxy to anchor the connectors to the board, as solder connections alone are not strong enough to stand up to repeated use of the connectors. Epoxy can also fasten the fuse holder in place. IC2, the 5 V regulator, needs to be well heat sunk. I used a large heat sink (similar to Radio Shack catalog number 276-1361) cut in half to fit inside the chassis box (see Photo 2). Don't forget to check your wiring against the schematic with an ohmmeter. Pay special attention to the voltage regulators. If these are wired wrong, they could be destroyed when you apply power.

Prepare the Chassis Box

Mounting holes are cut in the back of the chassis box for the SPST rocker switch S2 and the chassis-mounted coax power jack. Note also the access hole in the rear of the chassis box to allow adjustment of the 26 V power supply. I used 3/4-inch nylon standoffs to mount the power supply board and 5/16-inch standoffs for the heat sink. These standoffs are attached to the power supply board and heat sink with small screws and epoxied to the box. Be sure to roughen the bottom of the chassis box with coarse sandpaper or the epoxy won't adhere well to the bakelite material.

When the epoxy is dry, finish wiring the power supply. Following the power supply schematic, wire IC2 to the three tie points on the power supply board. Connect the chassis-mounted coax power jack, switch S2, and the remaining Molex connector. Plug this connector into the matching connector on the power supply board. Wire the inline coax power plug to the wall plug transformer, and check your wiring. Connect the wall plug transformer to the chassis-mounted jack, plug the transformer into an ac outlet, and turn on S2.

Measure the voltage at the output Molex connector. The 5 V output pin should measure true. The 26 V pin read-

LEVEL IV PRODUCTS, INC. PREMIUM GRADE TRS-80®

LEVEL IV MEANS, ■ VALUE ■ QUALITY ■ SERVICE ■ SUPPORT

BUILDING A PREMIUM GRADE COMPUTER IS A CLAIM FEW COMPANIES CAN MAKE, AND EVEN FEWER CAN BACKUP, WE DO IT EVERY DAY. EACH LEVEL IV MOD 111 IS CAREFULLY ASSEMBLED FROM PRE-TESTED COMPONENTS OF THE HIGHEST QUALITY, AND TESTED FOR PERFORMANCE TO A LEVEL FAR ABOVE THAT FOR WHICH IT WAS ORIGINALLY DESIGNED. AFTER BURN-IN, EACH UNIT IS DELIVERED WITH THE FAMOUS LEVEL IV SIX MONTH LIMITED PARTS AND LABOR WARRANTY (COPIES ARE AVAILABLE ON REQUEST).

A LEVEL IV MOD 111 IS DESIGNED TO BE COMPLETELY COMPATIBLE WITH THE MOUNTAIN OF SOFTWARE AND HARDWARE READILY AVAILABLE FOR IT. ANY ITEM THAT WORKS ON, OR ATTACHES TO, A STANDARD MOD 111 WILL FUNCTION WITH OURS.

CONSIDER THE FOLLOWING OPTIONS TO ENHANCE YOUR MOD 111

- 1)...SINGLE OR DOUBLE HEAD, 40 OR 80 TRACK DRIVER
- 2)...EIGHT INCH SINGLE OR DOUBLE HEAD DRIVER
- 3)...WINCHESTER 4.4 OR 14.5 MEG DRIVER
- 4)...3.1 MEGAHERTZ CPU CLOCK SPEED (SUPER FAST COMPUTING)
- 5)...MULTI-USER/MULTI-TASKING CAPABILITY, (64 TERMINALS)
- 6)...80 COLUMN BY 24 LINE DISPLAY, 64K RAM
- 7)...CP/M CAPABILITY, RUNS STANDARD CP/M PROGRAMS

BUILDING A MOD 111 CAPABLE OF THE ABOVE CERTAINLY MAKES IT A PREMIUM GRADE UNIT, BUT THE MOST IMPORTANT THING WE OFFER IS AFTER-THE-SALE SERVICE AND SUPPORT.

NOW FOR THE SURPRISE, OUR 48K 2-DRIVE UNIT, SELLS FOR ONLY **\$1499**

REMEMBER LEVEL IV MEANS, *VALUE *QUALITY *SERVICE *SUPPORT
SOME MAY GET CLOSE TO OUR PRICES, BUT NONE WILL MATCH OUR VALUES.

Photo 3. Wiring Side of Programmer

Fig. 16. Learn ROM Routine Flowchart

(Radio Shack catalog number 276-1558) and a piece of two-sided, copper-clad PC board. The board has to be about 2 3/32 inches wide and at least 3/4 inch long. If you make the board longer, it will be easier to plug it into the computer ROM-pack port, but you must be sure that it doesn't touch any metal surfaces.

Once you cut the board down to size, check it for fit by inserting it into your ribbon-cable connector. You may have to file the edges and to bevel or round off all four corners to ease the fit.

Next, mask off 40 traces on the board—20 on each side. Use etch-resistant dry transfers made by Datak Corp. Their assortment package of dry

transfers includes a sheet of straight-line traces perfectly spaced to match the ROM-pack port connector.

Follow the directions included with the transfers and apply 20 traces to each side of the board, making sure each is centered. It should take only about 15 or 20 minutes to etch the board with Datak's etchant; another brand might

UPGRADE

AT LAST!!! A Micro-Design Model III System Upgrade.

Photo 4. Two Types of Programmer-to-Computer Cables

take longer. Be sure you are in a well-ventilated area when working with the etchant.

If you can't find Datak transfers, you can use a roll of printed circuit tape or a resist-ink pen and a straight edge to make the traces. Measure carefully to get the correct contact spacing for the board. You can measure either the ribbon cable card-edge connector or a ROM-pack edge connector to get the dimensions.

If you don't like etching boards, try one of the blank ROM packs offered by some of the companies that support the Color Computer. You can't use Radio Shack ROM-pack boards because they don't have all the necessary contacts.

Once you finish your connector, you're ready to build your cable. If you are using a male card-edge type connector, you need something to hold the contacts in place while you press the connector onto the cable. A female connector works fine for this. Simply insert the male connector into the female connector and use a vise to press the male connector onto the 18-inch ribbon cable. Remove the female connector and carefully inspect the contacts of the male connector. If they appear pushed out of position, use a pencil or needle-nosed pliers to push them back into place. If you are using the female connector and PC board, simply press the connector onto the cable and insert the board. Next, press the 40-pin socket connector onto the other end of the cable. Make sure that the contacts of each connector are on the same side of the ribbon cable (see Photo 4).

Check It Out

Test the programmer in stages. Any

Fig. 17. Move Buffer Routine Flowchart

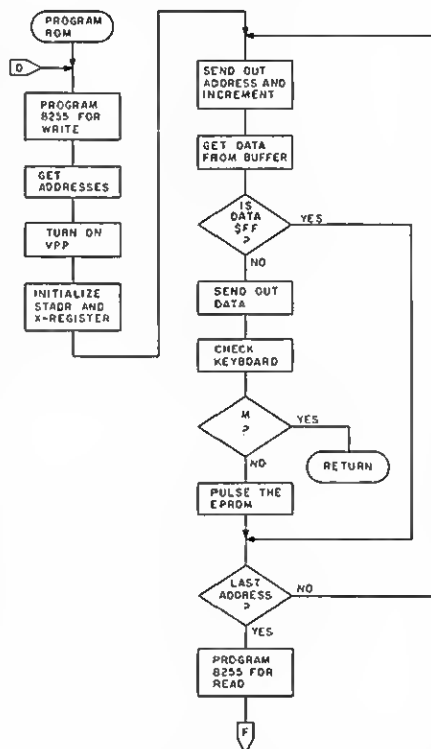

Fig. 18. Program ROM Routine Flowchart

time you don't get the proper indications, you should turn off all power to the computer and programmer immediately and refer to the troubleshooting section.

With the Color Computer off, plug the male connector into the ROM-pack port. The cable should come out from beneath the connector. As you plug in the male connector, the pin on top and nearest to the back of the computer is pin 1. You can use an ohmmeter to be sure that this pin connects to pin 1 of the 40-pin header on the programmer board. The other end of the cable plugs into the programmer board and should not be twisted or folded over the top of the connector. The programmer board should still have no components plugged into the sockets, and should not be connected to the power supply board. Place the programmer board bottom-up on a nonconducting surface.

Connect a voltmeter between pins 1 (-12 V) and 34 (ground) of the 40-pin header on the programmer board. Be certain that the meter leads don't touch adjacent pins. Turn on the computer and the meter should indicate -12 V. If you measure any other voltage, or if the computer does not start up as usual, immediately remove the power and locate the problem.

Final Assembly and Checkout

You can now install the ICs and the DIP headers with the discrete components. With the programmer disconnected from the computer, turn S1 off and turn on the programmer. Check the ICs for any signs of overheating. While they may get warm, none of them should be hot to the touch. If anything is getting hot, remove the power and find the problem before continuing. When everything seems in order, turn S1 on. The VCC light (LED1) should be on. Measure the transistor cases and you should have +26 V; if not, adjust the 26 V supply accordingly.

Turn off power to the programmer and connect it to the computer. Turn on the programmer first and then turn the computer on. If the computer doesn't start up properly, you have a problem that must be resolved before you continue.

Once the computer turns on without any problem, and it should at this point, set S1 to the 25 V position and enter the command POKE &HFF46,0. The VPP light (LED2) should come on. Measure the VPP voltage at the emitter of Q1, and adjust the 26 V power supply to get a reading of about 25.5 V. The OE*/VPP output at the emitter of Q2

WE'VE DONE IT AGAIN!

Our TRS-80 MODEL III PRICES have NEVER BEEN LOWER

IT'S NO SECRET!

It's no secret as to why we can sell TRS-80 computer equipment for less. Low overhead—that's the reason—pure, simple and straight! As everyone knows, Radio Shack is a huge corporation...with huge expenses. We are able to buy the bare-bones computers from Radio Shack. To these computers, we add our own memory chips, disk drives, cables, etc. The result is a computer system which is equal to, or in many cases, superior to the one you would get from Radio Shack in both price and performance capabilities. There is one thing that you don't get from Radio Shack—their 90 day warranty. What you get in its place is the exclusive 180 days American Small Business Computer's Warranty. So... if you like the Radio Shack computer, but don't like the price...CHECK IT OUT!!!

should read about 25 V. Enter the command POKE &HFF47,0, and the VPP light should go out.

You are now ready to try out your EPROM programmer. Load and assemble the program, and connect the programmer to the computer with the power off. Then turn everything on. Load the program from tape and enter the command EXEC \$3000 (or whatever start address you used).

If everything is running properly, the menu appears. Try running the verify blank ROM routine. I get 00 at every location with an empty socket. Then make sure S1 is off and insert the appropriate personality module and a 2716 EPROM. Select 25 V VPP with S1 and run the verify routine again. If your EPROM is fully erased, the test passes. If your EPROM is not erased, the fail data displays the EPROM contents at the location displayed. The expected data is \$FF for this test. If you have a programmed EPROM and know what the contents should be, this is a good check of the address and data bus lines.

Resolve any problems before continuing.

Your First EPROM

From the main menu, select the

*"If you must
troubleshoot for
defective parts,
a scope is your
most valuable tool."*

Move Buffer option and set the start address for \$3000 and the stop address to any number equal to or greater than \$3000. When the menu returns, select the program ROM option. It prompts you for addresses and you should enter 0000 for the start and 05AD for the stop

address. After two minutes, the EPROM is programmed and verified.

Did everything work as expected? If so, congratulations! You have done well. Now that you have your EPROM programmed, turn S1 off, remove the EPROM, and turn everything off. Put the EPROM in socket C1 and turn everything except S1 back on. Type in the command EXEC &HC000, and the program should be back up and running. To check out the rest of your programmer, obtain a sample of each of the other EPROMs and try programming them. If you can't afford one of each, at least try to get a 2732. If this device works properly, you have verified every signal except EPROM address line BA12, which is used only with the 64K EPROMs.

Troubleshooting

If you have problems at any point, always correct the problem before going any further to prevent possible damage. Check your wiring before looking for defective parts. If you must troubleshoot for defective parts, a scope is your most valuable tool. A logic probe is less helpful, but will probably do in a pinch. Small routines like those shown in Listing 2 help troubleshoot the programmer one section at a time.

If at any time the computer does not start up properly after being turned on with the programmer attached, then the problem is likely in one of two areas: first, check to be sure you aren't shorting out any of the computer power supplies. Since the programmer provides its own power, you should not have any wire-wrap connections to pins 1, 2, and 9 of the 40-pin DIP header.

If this checks out, then the 8255 PPI has probably seized control of the computer. Check pin 6 (CS*) to see if the PPI is being selected. This pin should always be high unless addresses \$FF40-\$FF43 are selected. These addresses don't appear to be selected during the power-up sequence of the non-disk computer. If the CS* line is low, or has pulses on it, then check ICs B3, B2, and A3 for miswiring or faulty components.

Once the computer is turned on and initialized properly, use the routines shown in Listing 2 should the programmer not work properly. ■

William R. Mahoney can be reached at 145 Laureba Ave., Stratford, NJ 08084.

PERSONAL COMPUTERS

WE HAVE THE NEWEST TRS-80 MODEL 12

80K, Two Slimline
Drives

\$3599

TRS-80* MODEL III

IT'S NO SECRET!

It's no secret as to why we can sell TRS-80 computer equipment for less. Low overhead—that's the reason—pure, simple and straight! As everyone knows, Radio Shack is a huge corporation...with huge expenses. We are able to buy the bare-bones computers from Radio

48K \$799

48K, 2 DRIVE \$1499

Shack. To these computers, we add our own memory chips, disk drives, cables, etc. The result is a computer system which is equal to, or in many cases, superior to the one you would get from Radio Shack in both price and performance capabilities. There is one thing that you don't get from Radio Shack—their 90 day warranty. What you get in its place is the exclusive 180 days American Small Business Computer's Warranty. So...if you like the Radio Shack computer, but don't like the price...**CHECK IT OUT!!!**

TRS-80* MOD 16

Why buy a computer that's outdated when you get it? With the TRS-80 Mod 16, you get a state-of-the-art Z-80 microprocessor, which is capable of running hundreds of already existing business programs. You **ALSO** get a 68000 series microprocessor. The new processor gives you true minicomputer power at a micro price! As the newer, more advanced software becomes available, you'll be ready. **Don't be left behind! Be prepared!**

MODEL 16 — 1 DRIVE

\$4499

MODEL 16 — 2 DRIVE

\$4779

DT-1 Video **\$620**

FRANKLIN COMPUTERS

64 K Franklin
with (1) ONE
DISK DRIVE
and

12"
Green Monitor
\$1699

XENIX UPGRADE

- 12 Meg. Hard Disk
- 128 K RAM Upgrade
- Installation Instructions Included

\$3199

THESE ARE OUR CASH DISCOUNTED PRICES. C.O.D. AND CHARGE ORDERS ARE 3% HIGHER. ALL COMPUTERS ARE SHIPPED FREIGHT COLLECT. PRICES, SPECIFICATIONS, AND AVAILABILITY ARE SUBJECT TO CHANGE WITHOUT NOTICE. IBM & IBM PERSONAL COMPUTERS ARE TRADEMARKS OF INTERNATIONAL BUSINESS MACHINES, INC. TRS-80 & RADIO SHACK ARE TRADEMARKS OF TANDY CORPORATION.

**DISK DRIVE WOES?
 PRINTER INTERACTION?
 MEMORY LOSS?
 ERRATIC OPERATION?**

**Don't
 Blame The
 Software!**

Power Line Spikes, Surges & Hash could be the culprit! Floppies, printers, memory & processor often interact! Our patented ISOLATORS eliminate equipment interaction AND curb damaging Power Line Spikes, Surges and Hash. **MONEY BACK GUARANTEE!**

- ISOLATOR (ISO-1) 3 filter isolated 3-prong sockets; integral Surge/Spike Suppression; 1875 W Maximum load, 1 KW load any socket... \$76.95
- ISOLATOR (ISO-2) 2 filter isolated 3-prong socket banks; (6 sockets total); integral Spike/Surge Suppression; 1875 W Max load, 1 KW either bank... \$76.95
- SUPER ISOLATOR (ISO-3) similar to ISO-1 except double isolation & Suppression... \$115.95
- SUPER ISOLATOR (ISO-11) similar to ISO-2 except double isolation & Suppression... \$115.95
- MAGNUM ISOLATOR (ISO-17) 4 Quad isolated sockets; For ULTRA-SENSITIVE Systems... \$200.95
- CIRCUIT BREAKER, any model (Add-CB)... Add \$10.00
- REMOTE SWITCH, any model (Add-RS)... Add \$18.00

Microsoft BASIC Decoded & Other Mysteries.

The complete guide to Level II operating systems & BASIC by James Favour. 312 pages, \$29.95

BASIC Faster & Better & Other Mysteries.

Microsoft BASIC programming tricks & techniques by Lewis Rosenfelder. Software available on disk. Radio Shack Cat. No. 62-1002. 290 pages, \$29.95

The Custom TRS-80 & Other Mysteries.

A guide to customizing TRS-80 hardware and software by Dennis Bathory Kitz. Schematics and listings. 336 pages, \$29.95

TRSDOS 2.3 Decoded & Other Mysteries.

The TRSDOS operating system explained by James Favour. Disassembly of code with commentary. 300 pages, \$29.95

BASIC Disk I/O Faster & Better & Other Mysteries.

Programming techniques and helpful subroutines, by Lewis Rosenfelder, for BASIC programs which store or retrieve data from disk. (Available in June) \$29.95

How To Do It On The TRS-80.

The applications guide to the TRS-80 Models I, II, III & Color Computer by William Barden, Jr. 300 pages, \$29.95 (Available in Spring '83)

Machine Language Disk I/O & Other Mysteries.

The guide to machine language disk software for TRS-80 Models I & III by Michael Wagner. 288 pages, \$29.95

Electric Pencil Operators Manual.

By Michael Shrayner and H. C. Pennington. 123 pages, 24.95

The TRS-80 Beginners Guide To Games & Graphics.

Simple programs teach basic concepts of graphics and game design, by Tom Dempsey. (Available in July) \$24.95

The Captain 80 Book of BASIC Adventures.

Eighteen program listings plus Adventure program generator, by Bob Liddil. 252 pages, \$19.95

NEW BOOK!

Software

Electric Pencil 2.0z Word Processing System.

The easy to learn, easy to use word processing system by Michael Shrayner. Includes operators manual. Disk \$89.95, Cassette or Stringy Floppy \$79.95

BLUE Pencil — 50,000 Word Expandable Dictionary. Companion to the Electric Pencil 2.0z word processing system. Disk \$89.95

RED Pencil — Automatic Spelling Correction. For use with the Electric Pencil 2.0z word processing system. Must be accompanied by Blue Pencil to operate. Disk \$89.95

BFBDEM — BASIC Faster & Better Library disk by Lewis Rosenfelder. 32 demonstration programs, BASIC overlays, video handlers, sorts and more for the Model I & III. Radio Shack Cat. No. 260-2021. Disk only \$19.95

80 BOOKS & SOFTWARE.

NEW BOOK!

BFBLIB — BASIC Faster & Better Demonstration disk by Lewis Rosenfelder. 121 functions, subroutines and user routines for the Model I & III. Disk Only \$19.95

Utilities

TRANSLATE Convert any character to any character or string. Create your own shorthand. Print special characters. Disk \$49.95

DISKMAP Produces two different reports; a listing of disk space allocation by granule, and a listing of all granules allocated to each data file. Disk \$29.95

Games

CYBERCHESS Chess Improvement System. Not a game, but a powerful and effective method for improving one's skill in chess. Choose from 55 amateur or 55 professional disk packets with 4 different games on each. System Disk \$29.95 (Includes four games). Each amateur or professional disk \$19.95 each.

FLAG RACE Race your car through a maze and try to reach all the flags before being caught and killed by drone cars. Can you do it?

For Models I & III. Disk \$24.95

SPACE ROBBERS

Inter-galactic thieves are after your supplies and you must stop them before they take it all. For Models I & III. Disk \$24.95

INTERCEPTOR

The aliens are attacking you in wave after wave, can you survive and get back to the mother ship to refuel? For Models I & III. Disk \$24.95

ALIENS

Invaders attempt to land and you must stop them. But watch out, you're dead if they land on you. For Models I & III. Disk \$24.95

FUNSOFT Games distributes through IJG for Models I & III.

BABLE TERROR Bables are roaming the maze like complex everywhere but you can only see a few yards ahead, can the Bables be cleared out before they clear out you? Disk \$24.95, Cassette \$19.95

MAD MINES Mad Mines are being placed into the space around your planet. As their mad pace speeds up, the situation becomes more difficult. Can they all be destroyed? Disk \$24.95, Cassette \$19.95

APPLE PANIC Crazy apples chase you over many ladder connected brick levels. Your only hope is to dig holes in the floor and beat them down when they get stuck. Disk \$24.95, Cassette \$19.95

THE BLACK HOLE Your mission is to seek-out and destroy the Dorian leader. But, can you survive the perils of the Black Hole? Disk \$24.95, Cassette \$19.95

TIME RUNNER Newly discovered land is yours for the taking. All you have to do is take it . . . before the defender droids catch you that is. Disk \$24.95, Cassette \$19.95

IJG products are available at computer stores, B. Dalton Booksellers, Radio Shack Computer stores, and independent dealers around the world.

If IJG products are not available from your local dealer, order direct from IJG. Include \$4.00 for shipping and handling per item. Foreign residents add \$11.00 plus purchase price per item. U.S. funds only please.

For years now you have been saving your pennies in a coffee can, sacrificing the good things in life, and you're finally ready to visit the local computer store to buy a hard or floppy disk drive. To your dismay, you discover a variety of disk drives for your computer.

Before you tear at your micro in despair, take a look at this buyer's guide. We've taken the frustration out of selecting a disk drive for you. We've included information on both hard disk drives and floppy drives (for those of you who have only a half-full can of pennies). We've also listed information on floppy disks.

Floppy Disk Drives

We haven't forgotten you Model I owners or those of you considering another floppy disk drive for your system. Unless otherwise noted in the chart, all the floppy disk drives listed are 40-track, single-sided, double-density drives. This is the most common add-on

unit on the market today, and the one that most of you purchase.

We omitted original equipment manufacturers (OEMs) from this listing since they provide drives and parts for virtually hundreds of different

hard and floppy disk drive system.

When you look over the floppy guide, you'll notice that there is a wide range in the disk capacity for these drives (160-600 kilobytes). So if you need a specific capacity for your up-

grade, chances are you'll find it here.

Everything else is pretty much standard among these upgrades with access time about 75 ms, track-to-track access time at 5 ms, and data transfer rate around 250 Kbits/s.

Each upgrade comes with a 90-day warranty that includes parts and labor and, in a few instances, shipping costs. Several offer extended warranties, but, because they vary so much in cost and in coverage, the specifics are not included.

The price of floppy disk drives is a primary concern for many users. Regardless of your requirements, you'll find something here to ease the burden

on your coffee can. If you're penny-conscious and can do without the frills, several companies, such as Interface and Microcomputer Technology, offer basic one-drive upgrade kits at reasonable prices. If you can be more flexible in your spending, you'll find everything you need from drive cabinets to multi-drives.

Hard Disk Drives

Well, here they are: the 15 companies that make hard disk drives for TRS-80 computers.

As with the floppy disk guide, OEMs are not included.

Most hard drives come with nonremovable disks and memory capacities ranging from 5 to 40 megabytes. Cameo and Santa Clara Systems, however, sell drives with removable hard disks that store 5-15 megabytes of data. These drives support several operating systems, from LDOS to DOSPLUS and from OASIS to XENIX. A few models come with CP/M, and others with a BIOS driver. Before you make a purchase, however, make sure your DOS is compatible with the drive you select.

The average access/retrieval time (the length of time it takes the read/write head to find a file on the disk) for most

F—Fixed
R—Removable

hard disks was about 70-80 milliseconds, with a few taking longer at 150 to 190 ms.

A quick look at the track-to-track access time shows that most models are capable of accessing a track in 3 to 5 ms.

The average latency (the time it takes the disk to rotate once, until the desired sector reaches the head again) is 8.33 ms for all drives.

The data transfer rate (the rate at which data is loaded on or off the disk) is a more or less standard 500 Kbits/s, though there are a couple of pleasant surprises. The Corvus drives are well above this standard; the Corvus Model 6, for example, has a data transfer rate of 960 Kbits/s.

The reliability of these hard disks is indicated by the mean time between failure (MTBF). This figure is the average time between disk drive breakdowns. Ten thousand hours MTBF seems to be the most common estimate. This translates into more than a year of 24-hour-a-day operation.

Hard disk drive prices range from

\$1295 for Compu-kit's 5-megabyte fixed drive to \$995 for Cameo's Model 1050 with 40 megabytes of fixed memory and 10 megabytes of removable memory.

What about warranties? A hard disk doesn't help you when it's broken, except to serve as an expensive paperweight.

Every company listed in the guide has a limited warranty, usually ranging from 90 days to one year on parts and labor. Several offer an extended warranty. Extended coverage can be as low as \$30 a year or as high as \$35 a month. Examine the small print on the contracts very carefully. You may discover that you have to pay all shipping charges, or that only the circuitry is covered, not the drive or DOS.

If you take the time to decide how much memory you need and how much money you can spend, this buyer's guide will help you limit your choices.

Disks

A computer is virtually useless with-

out a cassette or disk to hold information. As an addendum to this buyer's guide, we decided to list the most common floppy disks available.

This guide includes a description of the disk and the manufacturer's suggested retail price for a box of 10 disks. Although several manufacturers make special or optional disks, we list only the standard disks.

Verbatim, Dysan, and 3M all make the complete line of 5 1/4-inch and 8-inch disks. Because of space limitations, we could not list every disk made; Verbatim alone, for instance, makes about 40 different disks.

When using this buyer's guide, please remember that the entries represent current information which may be obsolete within three months. In fact, several companies we contacted had discontinued a product line mentioned in guides a month previous. ■

Programming the Model 16

by Dan Keen and Dave Dischert

Since the arrival of the new 16-bit processors, it is increasingly difficult to define the line separating microcomputers from minicomputers.

TRS-80 owners who have dabbled in Z80 Assembly language might be curious about the differences in writing programs for the new Model 16 with its powerful Motorola MC68000 microprocessor.

The MC68000 is not directly compatible with any other microprocessor, including the 8-bit MC6800 chip. Motorola decided to create instructions that make the most efficient use of the MC68000 chip rather than emphasize compatibility.

Eight data registers, named A0 through A7, and eight address registers, D0 through D7, give this chip real flexibility. Each register is 32 bits long, so that a programmer can store memory address locations without having to put registers in pairs, as is necessary when programming the Z80.

The familiar PC register is again called the program counter register here and it, too, consists of 32 bits.

A 16-bit status register resembles the Z80 flag register. An overflow bit, carry bit, and Z-flag bit are part of this register as well. Their functions are identical to these Z80 flags, so many programming concepts for other microprocessors are applicable here.

Instructions

Many opcodes comprise the 68000 instruction set. But, as in the case of the Z80, many are simply variations of each other and can be grouped together to perform similar functions.

When writing Assembly-language programs for the Z80, it is usually necessary to pair registers in order to store a memory address up to 65,535 (64K).

The MC68000 has registers that can

The 16-bit MC68000 microprocessor is fast, flexible, and not too hard to understand.

be accessed as 32-bit units. This lets it directly access any memory location up to 16 megabytes. Consequently, the MC68000 is capable of executing instructions with great speed.

Registers that are 32 bits wide and hold 4 bytes of information are called long words. Instruction codes can be kept simple by using 4-byte registers. One instruction does the work that takes several instructions with an 8-bit processor.

Another advantage to using 32-bit registers is that it ensures future editions of the MC68000 chip. Radio Shack was wise in using this microprocessor in the Model 16. Motorola designed this chip to be manufactured as a 32-bit processor when the technology permits.

So, while some microcomputer manufacturers use 16-bit chips at their maximum capability, Radio Shack is looking down the road.

It takes at least four separate lines of instruction code to make the Z80 microprocessor move a byte of information from one memory location to another. First, the destination address is read into a register pair. Then the source address is similarly loaded into another pair. The byte of data is then placed into a register and the contents dumped back out into the destination address. The source listing might appear as:

```
LD DE,destination address
LD HL,source address
```

```
LD A,(HL)
LD (DE),A
```

Using the Model 16 assembler, the MC68000 instruction would be:

```
MOVW @A0,#NUMBER
```

The label number is defined and equated to a value elsewhere in the program. The instruction above takes the number stored in the address NUMBER, and places it in the memory address indicated by register A0.

Not all instructions are that powerful, but the MOV or move command represents many codes that perform several tasks simultaneously.

When addressing registers in the 68000, you must specify the length of the operand associated with the mnemonic. In the above move instruction, the letter W is tacked onto the end of the mnemonic MOV. The sizes and their representation of these lengths are B for byte, W for a word, and L for long word. The instruction ADDW means the add instruction acts on 2 bytes. Most instructions consist of two bytes rather than a single byte, as with 8-bit processors.

Addressing Modes

When programming the Z80, you address registers either directly or indirectly. Direct addressing applies when the operand is in the register, and indirect when the register holds the reference address that holds the operand.

Radio Shack's Editor/Assembler for the Z80 allows you to place parentheses around a register to indicate that it is to be indirectly accessed. In the instruction:

```
LD (HL),A
```

the register pair HL is indirectly addressed. The parentheses tell the computer that the value stored in A is not to

Fig. 1. Model 16 Assembly Program Listing

be placed directly into HL, but rather in the memory location indicated by HL.

Similarly, on the MC68000, a period placed before a register specifies a direct operation and the @ sign indicates that the operand is in the location pointed to by the address register. In the MOV instruction just discussed, you can see that @A0 is indicating that the contents of that register were the address we were to use.

.A1 represents a direct action on register A1.

@A0 represents an indirect action on register A0.

When writing programs for 8-bit microprocessors, the programmer must not be concerned about whether the byte placement of an instruction is even or odd since all registers are only 1 byte long. This is an added parameter that

must be dealt with when programming the MC68000. Most instructions are 2 bytes long, and a word or long-word operand must fall on an even byte address.

It may seem unusual at first, but it is unnecessary to use an origin pseudo-op or directives, when writing a 68000 program on the Model 16. By not specifying an origin, the assembler automatically places the program in the next available RAM area after TRSDOS and any utility programs are loaded.

The editor/assembler program that Radio Shack provides with the Model 16 is more difficult to work with than their Z80 package. You must spend some time getting acquainted with this editor/assembler before doing any serious programming.

Supervisor Calls

Like the other TRS-80 computers, the Model 16 disk operating system contains many user routines. These supervisor calls can be jumped to from machine-language programs. These calls facilitate communication between the keyboard, video display, line printer, and disk drives.

Before carrying out many Z80 instructions, you must set up certain registers. Prior to using an LDIR mnemonic, load the source address into register pair HL, the destination address into DE, and the number of bytes to copy into BC.

Similarly, before executing a supervisor call, a buffer area in RAM must be established and certain values placed at key positions within it. The instruction BRK #0 calls the routine.

Figure 1 shows a listing created with the Assembler 16. This short program shows two supervisor routines being accessed, displaying text on the screen and returning to the TRSDOS ready mode.

Writing Assembly-language programs for the 68000 is no harder than writing for the Z80; it is merely different, because some new rules apply due to the longer byte length of registers and instructions.

A computer's ability to execute instructions increases more rapidly if it uses a 16-bit processor instead of an 8-bit processor.

A 32-bit, single-chip microprocessor is expected in 1985. By that time, technology will have reached the point where man can package over one million transistors in a single integrated circuit. ■

Dan Keen and Dave Dischert can be reached c/o Soft Horizons, RD1 Box 432, Cape May Court House, NJ 08210.

DEALERS • DISTRIBUTORS • OEM'S

- Enclosures and power supplies with or without drives.
- Low minimum orders.
- Attractive quantity pricing.
- Durable, textured, color compatible finish looks great on your display counter!
- Fully engineered product, high reliability design.
- NOW AVAILABLE IN QUANTITY: DUAL TEAC FD-55 VERTICAL ENCLOSURE WITH OR WITHOUT FILLER PLATE, SINGLE OR DUAL TEAC FD-55 HORIZONTAL ENCLOSURE.
- All standard configurations also available.

Go with the flow.

Flowchart Generator

Peter R. Ohs
4605 Westridge Place
Temple Hills, MD 20748

Many people think programs should be flowcharted before writing the code and that flowcharting after the fact is a waste of time. Have you spent hours checking the jumps in purchased software so you can make a generalized patch

or custom code a new section? If the answer is yes, then you know that flowcharting a program is not a bad idea. The flowchart display doesn't solve all your programming problems, but is a great tool to have around.

Kilobaud Microcomputing in April 1981 ran an article on a flowchart generator by Peter A. Stark. This interested me, so I translated the program for my TRS-80.

Since the original article had extraordinary remark statements, I tried to keep the

same line numbers. I dropped his remark statements in my translation, though I had to use the two arrays in storing the to and from pointers (original array) S(i) and added SL(i) for the lower half. This was necessary since the full eight-digit floating-point number used originally didn't always give the correct answer during my test phase. This problem was pointed out in the original article and the modifications were shown.

Table 1 contains the new or revised line numbers and comments to go from Percom Super Basic to Radio Shack Disk Basic.

Many TRS-80 programmers like to stack as many statements as possible on one line. This causes problems in the printing even if you only print the keywords. A condensed line sometimes is too large for the available printing area and if left unfixed throws off all the printing.

The following lines handle this situation: Lines 2041-2043 check the length of the condensed line and truncate where necessary. Place a plus sign at the end to highlight if the truncation is performed.

Lines 2210-2230 of the original program use the function POS that indicated the head position of the printer display. I replaced this function with hard code to increase the display to more than 80 characters per line for users with this equipment.

For print characters used to show directions, I replaced the symbol with CHR\$() commands as follows:

CHR\$(96) down arrow
CHR\$(95) left arrow
CHR\$(94) up arrow
CHR\$(126) right arrow

After debugging and fixing my keying errors, I had to test the program on something

A critic* called my accounting systems "very impressive" and "very reasonable." That was before I cut the price.

I'm Irwin Taranto, and my programs impressed a lot of people. I sold enough to pay off all my development costs.

So I cut the price 25% on some, 50% on the rest.

Now my Model I and Model III systems cost \$75 each:

- Accounts Payable
- Accounts Receivable
- General Ledger
- Inventory Control
- Invoicing
- Payroll

And my Model II/16 TRSDOS systems cost from \$150 to \$200:

- General Ledger
- Accounts Payable/Purchase Order

- Accounts Receivable, Open Item or Balance Forward
- Payroll/Job Costing
- Inventory Control

Even at the new price, I still provide what could well be the best support in the microcomputer industry. If you have a problem, call us and we'll fix it. Even if I have to do it myself, personally, right there on the phone.

Considering what you get in these systems, I probably could have raised the prices.

But that wouldn't have been nearly as impressive.

CS_i 

There are a few minor traps TRS-80 users should be aware of. First, my translation only allows for four-digit numbers even though RS Basic allows for numbers up to 65529. If your program has five-digit line numbers, renumber with any one of a num-

For programmers with the ability to print more than 80 characters per line, this modification should help you print more information on the condensed line output:

```

2041 IF LC<50 THEN 2043
2042 C$ = LEFT$(C$,49) + " + "
2230 FOR K=P3 TO 79 STEP 2

```

I now have a program to flowchart Basic programs and the knowledge I picked up will help if I start on other projects of the same nature. ■

Line 1: Clearing necessary string space
Line 2: K9 = number of keywords to be checked
Line 3: LY = 1 if only 10 branches wanted, 2 if 20 branches wanted (the line printer must have 120 characters per line)
LL = maximum number of characters possible in Radio Shack Disk Basic, 255
KS sets printer loops for 10 or 20 branches
Line 5: Reminder to have 120 CPL if LY = 2
Lines 170-177: Keywords TRS source—original program had them in lines 3330-3420
Line 180: Title for the top of the chart (new)
Lines 221-224: Needed to add this since the original program had to have a four-digit line number on each statement. This patch of code pads the line number with zeros. Same for lines 982-986.

TRS → IBM FILE TRANSFER PROGRAM

Transfer your TRS Model I, II, III, or 16 files to the IBM Personal Computer.

- No more retyping
- No more wasted time
- Fast transfer - baud rates of 110-9600
- File concatenation supported
- Send files of any length
- Make \$\$\$ - the IBM PC is new and software is scarce - take your "new" IBM programs and sell them for \$\$\$.
- Transfer **any** file - ASCII, embedded control codes, compressed binary formats, encrypted data bases, high level language programs (Basic, Fortran, Cobol, Pascal, etc.), electronic spread-sheet data, word processor files - it **all** gets transferred - nothing is added - nothing is lost!

The File Transfer Program comes complete with all instructions, hardware and software (for both TRS and IBM).

FILE TRANSFER PROGRAM diskette
(Works with DOS 1.1 or 2.0)

\$89.95

Plus \$1.60 shipping & handling.
State TRS model when ordering.

"THERE IS ONLY ONE WAY TO DESCRIBE THE PERFORMANCE OF POSTMAN MASS MAILING SYSTEM, - 'FLAWLESS.'"

Info World, by Tim Danelluk, Vol. IV, No. 37, 9/1982

InfoWorld Software Report Card

Postman Version 2.29

	Poor	Fair	Good	Excellent
Performance	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
Documentation	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
Ease of Use	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
Error Handling	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Business programs have come of age on the TRS-80* Mod I and III and the speed and flexibility of the POSTMAN MASS MAILING SYSTEM, makes it the best buy on the market today. In these rough economic times, every business program purchase must be selected very carefully and be evaluated and compared against all other competitors. POSTMAN MASS MAILING SYSTEM stands up to this scrutiny.

POSTMAN MASS MAILING SYSTEM has the capability of managing 22,000** names on floppy disk drives and up to 292,000** names on a hard disk system. No longer do you have to search from diskette to diskette to find the file you need. POSTMAN MASS MAILING SYSTEM utilizes all of the disk drives you have on line, and presents all at once, one large file totally accessible; as if you only had one large disk drive. In his review, Tim Danelluk describes this unlimited storage capability aptly by saying: "POSTMAN 'spans' multiple disk drives" despite the unpretentious 5 1/4-inch mini-floppy disk. This exceptional feature gives you the ability to start with a two disk-drive system and add more disk drives as your business grows, without any difficulty.

Professional people in the industry have remarked how POSTMAN MASS MAILING SYSTEM, written entirely in Machine language and menu driven for simplicity, fulfills a variety of small business needs.

PURGE - Consider for instance, how it can purge duplicate tables, preventing you from mailing multiple information to the same person.

SORT - It has the ability to sort on any or all of the ten data files of the program quickly.

ERROR HANDLING - All erroneous data is trapped. It never fails because of incorrect operator entry.

Commonly Asked Questions About POSTMAN MASS MAILING SYSTEM

Q. How many names can I get on my standard 2 drive TRS-80 Mod III?

A. On the average 1900, depending on your operating system. LDOS is the least - Multi-DOS has over 2,000.

Q. How many disk drives can I run at the same time with your program?

A. At this time only 8 disk drives - 4 floppy disks and 4 hard disks.

Q. What is the capacity of a disk drive?

A. There are many different sizes of disk drives. See the chart below.

MOD I SINGLE DENSITY

135 Track Data Disk	642 ea.
40 Track Data Disk	742 ea.
80 Track Data Disk	1542 ea.

MOD I OR III DOUBLE DENSITY

140 Track Data Disk	1346 ea.
80 Track Data Disk	2700 ea.
80 Track Dual Head	5500+ ea.
11 5 Meg Hard Drive	38,000+ ea.
11 7.5 Meg Hard Drive	68,000+ ea.

*Denotes the size on a standard system from Radio Shack. †Requires LDOS or DOSPLUS Operating Systems and hard disk version of Postman.

Q. Am I limited to only one disk drive or can I add more drives?

A. You can combine any of the above disk drives, up to a maximum of 4 dual headed 80 track drives, plus 4-7.5 meg

hard drives, for a total capacity of 292,000* names. The system to date has been field tested, and is in everyday use at over 100,000 name capacity.

Q. Outstanding having all those names, but how does it effect the speed of the system?

A. As anyone could expect, as a system gets larger it reacts slower. Below is a sample of the different systems.

SYSTEM CAPACITY	SORT TIME - ONE FIELD	SORT TIME - ALL 10 FIELDS	INSERT TIME
1,342	12 Seconds	16 Seconds	1 Second
5,500	18 Seconds	28 Seconds	1 Second
11,000	24 Seconds	40 Seconds	2 Seconds
38,000	5 Minutes	7 Minutes	2 Seconds
78,000	8 Minutes	12 Minutes	2 Seconds
200,000	30 Minutes (estimated)	51 Minutes	4 Seconds

The above tests were done with a Mod III and DOSPLUS 4.0 Operating System. The speed you receive will depend on many factors. It should be noted that as you insert a name, it is put in sorted order on the disk. You never need to re-sort, unless you wish to change the order.

Q. Do you plan on adding anything new to your program soon?

A. Yes! and all registered owners of Postman Mass Mailing System can upgrade to the latest version for a nominal fee.

- Now to top off this super program is a new lower price. -

\$79.95

Standard Version (was \$125)

\$225.00

Hard Disk Version

\$119.95

Postwriter Version (was \$175)

If our high quality program isn't enough to win you over, we will win you with the new low, low price!

+ PERSONAL FUN -- ♥ ♦ ♣ ♠ 🇺🇸 🇬🇧 🇩🇪

MAXPRINTPLUS is an exceptionally versatile Printer driver utility specifically designed for Epson MX Series printers with GRAFTRAPPLUS. It allows you to utilize any Graffiti text feature on a *character-by-character* basis. Changes are created by inserting simple control characters within word processing text.

The character editor feature allows you to create any letter imaginable. The entire program is 100% assembly language for speed, smooth, quick response. CB editor and character generation commands with a built-in help file allow you to perform functions like copy, find, merge, replicate, and delete. Completed letter files can be *stored and recalled from disk* for future use.

The standard MAXPRINTTM works with all BASIC programs. Adapter programs are provided for SCRIPT, LATTM, WRITER, and PENCIL. Minimum system requirements are a 486 Model I or Model III with one disk drive. (Model III needs two disk drives to convert only.) Epson MX Series printer must be equipped with GRAFTRAXTM.

Unleash the true potential of your EPSON.
MAXPRINT is supplied on disc with manual,
adapter programs, and shipping for only:

EARLY GAMES

FOR YOUNG CHILDREN

Nine educational and entertaining games controlled by a single program. Even very young children can select a game, play it, and select a different game...**ALL BY THEMSELVES!**

- PICTURE MENU GIVES CHILDREN CONTROL
- MATCH NUMBERS AND LETTERS
- COUNT COLORFUL BLOCKS
- ADD AND SUBTRACT STACKS OF BLOCKS
- LEARN THE ALPHABET
- PRACTICE SPELLING NAMES
- COMPARE SHAPES
- DRAW AND SAVE COLORFUL PICTURES

The large numbers and letters fill the screen with color. Children enter single key stroke responses and get immediate visual and musical feedback. Hints are provided when appropriate. Beyond just teaching children basic skills, **EARLY GAMES** makes them feel comfortable as they control the computer. Designed for children ages 2½ to 6 years old.

EARLY GAMES offers the child a diverse selection of activities which stimulate the process of problem solving as well as foster individual creativity.

Pamela Bach, Director
Youth World Day Care Center

I took **EARLY GAMES** home for my kids and they really liked it! It held their attention and they learned from it!

Jeanette Fritze
Computer Saleswoman

EARLY GAMES can help children learn new concepts, information, and skills and also introduce them to the joys and benefits of home computers.

Peter Clark, faculty
Institute of Child Development
University of Minnesota

THE COMPUTER CONNECTION

Multiplexor for your Hard Disk

GET IT ALL TOGETHER

ADD COMPUTERS TO YOUR HARD DISK

Adding a hard disk to your computer is the first step in making your micro a powerful computer. Adding more computers to your hard disk makes it a real system. The Bi-Tech **MULTIPLEXER** does just that. Joining a **MULTIPLEXER** with your hard disk sub-system enables you to share a hard disk with many computers, and it does so without the need for additional sub-systems. The **MULTIPLEXER** allows users to share programs and data present on the hard disk, thus affording a true data base to all of its users.

The Bi-Tech **MULTIPLEXER**:

- * is capable of operating at a faster speed than the hard disk. There is no waiting time as with other systems.
- * offers the same data transfer rates as in a single computer to hard disk sub-system.
- * is totally transparent to the user, software, and hardware
- * is now available for most computers with a Bi-Tech Hard Disk sub-system and also for many other hard disk systems.

MULTIPLEX VS MULTIUSER

Unlike multiuser systems, which share the microprocessor, the concept behind multiplexing is to share only the disk storage. This frees each computer to use as much processor time as required without affecting the other users. The Bi-Tech **MULTIPLEXER** links multiple computers to a single hard disk sub-system.

MULTIPLEX VS NETWORK

The Bi-Tech **MULTIPLEXER**'s parallel transfer capability preserves the Hard Disk Drives fast transfer rate. No time is wasted on parallel/serial conversions as would be in a network scheme. Serial networks require one computer to be the host for the rest of the system. In a Multiplex system any computer can be run completely independent of the other computers. As such, each computer is not affected by a hardware or software failure on another computer. In addition, a network also requires expensive decoders at each station, but a Multiplex station needs only an inexpensive host adaptor to link into the Bi-Tech **MULTIPLEXER**.

SPECIFICATIONS:

- Single Circuit Board • No External Power required • No Speed loss between CPU & Hard Disk • 4 Users per Multiplexor may be daisy chained • WD 1000/1001 Compatible • Software independent •

STRIKE FORCE

From Melbourne House

You are the warrior-savior of cities under relentless alien attack. You're armed with rapid-fire missiles, radar and incendiary star-shells; but you'll need your fastest thinking and instantaneous response to protect yourself and your people. Great real-time graphics!

16K Tape, \$15.95

32K Disk, \$19.95

VOYAGE OF THE VALKYRIE

By Leo Christopherson from AOS

Combine the animation and music techniques pioneered by Christopherson with the challenge of his first fast-moving arcade game and you have VOYAGE OF THE VALKYRIE! You speed through a magical maze guarded by ferocious birds that swoop down to attack if you don't get them first. To list all the play and options of this exciting game would take the 16 pages of instruction included.

16K Tape, \$34.95

32 K Disk, \$39.95

FROGGER

From Cornsoft

One of the most popular arcade games ever... now available for your home computer! Just as in the arcade game, you must dodge heavy traffic and jump the moving logs in the stream to get home. Fantastic graphics! Requires joystick.

16K Tape, \$19.95;

32K Disk, \$22.95

INVASION ORION

From Epyx

You are Fleet Admiral in this tactical space battle game for one or two players. Ten scenarios. 3 skill levels. 30 types of starships allow a variety of settings and objectives. Experts can design ships and create more scenarios. Concentrate on strategies to stop the robotic Kiaatu!

24K Tape or Disk, \$24.95

NEVER BEFORE!

Never before have there been **COLOR DISKS!** Never before have we advertised blank **DISKS!** But these are so special...

INTRODUCING COLOR DISKETTES

Bright and bold! Premium quality mini diskettes in 5 brilliant colors: red, orange, yellow, blue, green. Single sided, soft sectored, double density with hub rings. Use them just for beauty or to color code your programs and data!

Box of 10—all one color

or

\$34.50 Box

Box of 10—2 each color

INSECT FRENZY

From Dubois and McNamara

Don't let the Centipede get you!! Each time you hit it, only one segment disappears. You must keep firing until the *whole thing* is gone—or, when you have been hit 4 times. And whatever you do, avoid the Giant Spider! Joystick compatible.

16K Tape, \$15.95

or Disk, \$19.95

DATESTONES OF RYN

From Epyx

This fantasy role-playing adventure has 14 real-time play options that are all easy to use single key commands. As the hero, you explore the cave complex to find the thieves with the precious Datestones from the ducal calendar of Ryn. Flee or fight, parry or thrust, heal your wounds or speak with monsters! You can even compare scores with the built-in competitive scoring system.

32K Tape or Disk, \$19.95

CYBORG

By Bill Dunlevy and Douglas Frayer
From Computer Shock

The first TRS-80 totally original arcade game to have screen movement in all four directions. Use multiscreen or scanner view of entire complex. Cyborg, the space gladiator, explores the 20 levels of mazes of an interstellar space-station arena to find energy signal modules. Avoid or chase down threatening, frenzied robots. 4 skill levels for 1-4 players with incredibly smooth, fast action graphics and arcade sound. Joystick compatible.

16K Tape, \$19.95

16K Disk, \$24.95

JOVIAN

By Bill Dunlevy and Douglas Frayer
From Computer Shock

Uses nine screens at a time with wrap-around graphics! The screen slides in all 4 directions. Humanity's arch-rivals in space, the Jovians, must be destroyed. Take your pick of 3 galaxies, each with 20 sectors. Your rapid fire plasma bullets will destroy life pods. Choose from 4 game speeds and neutral. Win the galaxy with this machine language game that has extensive sound and amazing control response.

16K Tape, \$19.95

16K Disk, \$24.95

ASSAULT

By Bill Dunlevy and Douglas Frayer
From Computer Shock

New, arcade quality, machine language game with multi-directional screen movement and secondary map. Using four speeds and neutral, your tank has ultrasonic wave cannons to destruct creatures stealing your bags of gold. Move deeper in the vast chain of underground caverns obstructed by debris. Beware of Nodrog, the giant spider who rules the underworld!

16K Tape, \$19.95

16K Disk, \$24.95

CRUSH, CRUMBLE AND CHOMP!

From Epyx

It's a monster movie, and you are the monster! You can be The Glob, Kraken, Mantra, Mechismo, Arachnis or Goshilla—or even design your own "custom" monster (disk version only). Hilarious action game, loaded with graphics and sound, as you practice your villainy and avoid science, the police and the armed forces.

TRS-80: 16K Tape or 32K Disk, \$29.95

REAR GUARD

By Neil Larimer from Adventure Int.

A space battle between your cruiser and wave-after-wave of enemy ships. You can destroy them with your energy darts or you can ram them—as long as your shields are intact. The action takes place on a continuous horizontal landscape. You control the altitude and speed of your craft as you pursue the enemy. Skill level 1 is exciting, and there are four more levels available.

SPOOK HOUSE/ TOXIC DUMP

By Roger Schrag

From Adventure International

Over 50 full screens of breathtaking realism! Time is the one luxury you don't have in these two machine language graphic adventures with real-time action. Knocked unconscious inside the Spook House at a crazy carnival, you must locate and defuse the explosives. Then, avoid the traps and protection systems and shut down the Toxic Dumpsite before deadly contamination explodes. Extensive vocabulary accepts real sentences and you get two full disks of data.

48K Disk, \$39.95 \$33.96

FINEFONT

By Vincent Bly from Acorn

Now Epson owners can have true letter-quality printing with FINEFONT at 10, 11 or 12 characters per inch. With boldface, underlining and incremental spacing (for proportional right justification). 32 special characters including those needed for mathematics plus a graphic editor to create or edit character sets. It supports all Epson print modes, and is compatible with word processors including Model I SCRIPSIT, Model III SCRIPSIT, and Lazy Writer (Model I, III). Print speed is approx. 20 CPS, uni-directionally. It's compatible with most DOS's including LDOS 5.1, TRSDOS, NEWDOS/80 Ver 2.0. Requires following Epson printers: MX-80 with Graftrax-80 or Graftrax-plus; MX-100 with Graftrax-plus only. Requires 48K Disk, \$49.95

STRATOS

From Adventure International

This may be the battle to destroy the universe! Your enemies have perfected the dreaded Matter Ravager. Wave after wave of the deadly craft attack your planet and puncture the energy envelope surrounding it. You are in control of the Armageddon Wave, the only weapon capable of destroying the alien ships. Exciting, challenging, non-stop action. "Out of this world" sounds and graphics. 1 or 2 players; requires joystick.

Programmer's Corner

SPEAK!

By William Neville III

Incredible new voice digitization/generation program that needs no voice synthesizer. You use your cassette recorder's microphone to input words or phrases. SPEAK! digitizes them and produces a disk file for later use in your own programs. The speech generated is sent out through the cassette port to any amplifier. Create your own talking games and voice prompted programs! While a model III is required for speech input, the resulting voice output will work with models I or III. You have to hear it to believe it!

HOME ACCOUNTANT

From Continental Software

Powerful home finance package manages your money simply! Track 100 budget categories for 5 different checking accounts and all the credit cards you have. Watch the program print checks, balance sheet, net worth statements and produce trend analyses, bar or line graphs. The time saving transaction history lets you customize your own financial package. Great for realistic budgeting!

Disk \$74.95

FLIGHT SIMULATION

By Bruce Artwick from Sub-Logic

A graphic tour de force that will truly captivate you. If you haven't seen this brilliant program, you haven't fully utilized the capabilities of your computer! During FLIGHT SIMULATION, you instantly select instrument flight, radar, or a breathtaking pilot's eye view. But be sure to strap yourself in—you're liable to get dizzy!

Once you put in some air time learning to fly your computer, head for enemy territory and try to bomb the fuel depot while fighting off five enemy warplanes. Good Luck! Please specify Model I or III.

Using Data Files—Part I

by Jesse W. Baker

Data files consist of characters stored on magnetic disks independent of other programs. You can learn to handle them efficiently.

TRS-80s use two types of disk file structures to store information and/or data: sequential-access and random- or direct-access. This article discusses how to create and use the sequential file structure.

Two disk sizes are available: a 5¼-inch mini-disk and an eight-inch disk. Both sizes have limited data stor-

age capacity, and must be used with file structures that ensure the most efficient use of available space. This is determined by the type of operating system on the computer.

The storage capacity on the 5¼-inch disk under TRSDOS is approximately 184,000 bytes of data on 40 tracks in the double-density format.

The eight-inch disk capacity is approximately 500,000 bytes. A double-density disk has 77 tracks with 26 sectors per track. Each sector holds 256 bytes.

A single-density disk has the same format but holds only one-half the number of bytes per track. Other operating systems may have greater storage capacities.

A disk lasts for approximately 3.5 million passes per track or until you put your grubby fingers on the recording surface, whichever comes first.

Sequential files can be visualized as long contiguous ribbons of information, with data recorded one piece after another. In fact, you are reading this article as a sequential file.

Sequential files use disk space more efficiently than random- or direct-access files. But, there are a number of problems associated with this type of file structure. Since they are designed to store information that will not change very often, it is difficult to make changes to the file contents.

These files are quite slow, because if you want to read a piece of data toward the end of a file, you must search through all the data from the beginning of the file until you find what you're looking for.

It is also difficult to add data to a sequential file because when you open the file as OUTPUT, you destroy its contents. You can prevent this by using a routine that copies the existing file over to another file.

It is interesting to note that some

Close	Used to free the file buffer for other uses and to secure the file. Used by both sequential and random-access files.
Delimiter	A character used by the computer to mark the end of one data item and the start of another.
EOF	End Of File. This allows you to test for the end of file. If you try to read past the end of file you get an error.
Field	An item of information within a record. Example: An individual's name.
File	A group of related records. Example: A mailing list.
I	Tells the computer that the sequential file contents will be read (input) from the disk to the memory.
INPUT #	Reads data from a sequential file.
LINE INPUT #	Reads a line of text from a disk file, one line at a time. Will usually recognize only a carriage return as a delimiter.
O	Tells the computer that the data in memory is sent to the file.
Open	A statement that gives you access to a sequential file. Used by random-access files also.
PRINT #	Writes information to a sequential file.
Record	A complete group of related data. Example: A person's name and address.

To create a sequential data file you must follow the word sequence exactly, otherwise you will have problems. A typical statement could be:

The Open statement tells the computer which file to use. If the file does not yet exist, it creates one.

The "O" part sets the access mode for the file. "O" (output) takes information from the computer's memory and places it on the disk.

The number 1 in the statement assigns a buffer to the file. The buffer is a section of memory that acts as temporary storage for the file contents, 256 bytes at a time. It is used for both output and input. You cannot have the same buffer open for more than one file at a time. Assign another buffer if you have more than one file open at a time. You can have up to 15 buffers open at the same time.

The name of this file is `SAMPLE/FIL`, but a name can be either alphabetic or a string variable. Using a string variable lets you use the same open statement for many different files.

If you use a specific name for your file, you must enclose the name in double-quotes, as in: OPEN "O", 1, "SAMPLE/FIL".

If you use a variable as the file name, it isn't necessary to use the double quotes, as in: `A$="SAMPLE/FIL"`
`OPEN("O", J, A$`

The next line of significance, the print statement, prints data to the file through the buffer specified in the open statement.

Each item in the print list should be followed by a semicolon. This packs the data tightly into the record, where a comma places it far apart, wasting valuable disk space.

The semicolon is called a **delimiter**. It tells the computer that the items in the list are to be treated as a series or a **string** of bits or characters. This marker is not a part or member of such a series or string.

The semicolon makes sure that the data is placed properly in the file. Because the sequential file stores data in a long stream, the semicolon forces the item list to be printed in sequence with no extra spaces between each item. For example, if we say: PRINT #1, "A";"B";"C", the computer places A,B,C in the file so it would look like Fig. 1.

Notice that there are no spaces between the characters and that the last character is followed by a period. The period delimiter is placed there by the system to signify the end of the data. If you use just a comma as in `PRINT #1, "A","B","C"`, you get the record shown in Fig. 2.

Notice the amount of wasted space; this example uses 35 bytes instead of four.

A comma can also be a delimiter. The

**The System That Makes
Your Cleaning Kit Worth
15 Times The Price
You Paid For It.**

Clanner 80 is a software program designed to give you your money's worth — and more — when it comes to planning the disk drive head of your TMS-80 computer.

With this system, you can get up to 400 cleanings out of each disk drive head cleaning kit — instead of the 20 cleanings specified by the manufacturer. That's 15 times the number of cleanings you would normally be able to achieve.

Order yours today. Please specify whether you need the TRS-30 Model I or TRS-30 Model III version.

*29- Cleaner 80

If You Do A Lot Of Editing Of Your BASIC Programs, Then This Is The Editor For You!!!

The Full Screen Text Editor for BASIC, we were the first to give the TRS-80 this indispensable ability. What ability? The ability to edit your BASIC program with the ease of word processing. It is a type of word processor specifically designed to handle BASIC programs instead of letters and documents.

■ The capability to change, insert and delete a character or characters:

Simply position the cursor over the character that you wish to change and type in the new one. Another handy feature is Insert Mode, this is used to add text in the middle of a program line.

■ Extend a line or insert new lines:

Extending a line is as simple as two keystrokes, instantly the cursor jumps to the end of the program line and the editor is placed in the insert mode.

■ Delete, copy or move statements:

All you have to do is mark the line or block of lines and then tell the editor where to move or copy them.

■ Global Search and/or change any specified string:

Have you ever needed to change a lot of PRINT statements to LPRINTs?

■ Macro key facility:

Macro keys can cut your programming time in half. You can define each of the 26 letter keys (A-Z) to represent BASIC keywords, or any letter or number combination up to 6 characters per key.

■ Renumber commands:

What's so special about this renumber facility? Not only can it renumber selected portions of your program, it also checks all GOTO, GOSUB, THEN and ELSE statements and updates them as needed!

You may have seen other Editor programs advertized that give you one, maybe two of these features. You may have also seen some of these features sold as separate utility programs.

Only CAU offers a complete editing system, not just a word processor patched up to handle line numbers.

You can order the BASIC Editor directly from Computer Applications Unlimited or ask your local computer store.

Cat# 1210-20 for TRS-80 Mod 1 & 3 **only \$29.95**

The Editor is supplied on tape with complete instructions to move it to disk. If you wish us to send the editor on disk please add \$5.00 and ask for a DISK DUMP.

Add \$2.00 for shipping in the U.S. and Canada, \$10.00 outside USA

explicit comma is useful for separating a number of data strings in a sequential file, such as: PRINT #1, JS\$;"",R\$.

Quotes around the comma force a comma delimiter between the data strings and allows the information to be retrieved correctly. For instance,

say that: JS\$="JOHN" and R\$="ROGER".

Using the above statement, you print the strings to the file and the disk file looks like Fig. 3.

If you asked the computer to INPUT JS\$, it would know where the string end-

ed and return JOHN to you, because the comma you forced in between the two names tells it where one ended and the other began. That saved some space; in fact it worked as well as the semicolon.

If you write a string data item with a comma in it as a valid character, such as JS\$="ROGER,JOHN", you'll need to surround the data item with explicit quotes in the print statement and then print it to the file like this: PRINT #1,CHR\$(34);JS\$;CHR\$(34), where CHR\$(34) is the hexadecimal code for quotes. The quotes tell the computer to accept all the characters up to the next set of quotes as valid data.

Your file record would then look like Fig. 4.

There is one other type of delimiter often overlooked, but it is as valid as semicolons, commas, or quotes. This is the humble CHR\$(13) or the carriage return that we create every time we press the enter key. The statement PRINT #1, A\$;B\$;C\$ can also be written as:

```
PRINT #1, A$
PRINT #1, B$
PRINT #1, C$
```

Each string variable is followed by a carriage return or CHR\$(13) and this is treated as a delimiter by TRSDOS. This produces a file record that looks like Fig. 5.

It should be noted that the five sample records shown above are typical of what is found in a data file if you list out the file at the TRSDOS Ready mode by typing LIST file name.

In the file above, R = 1 gives the record number and the LRL = 1 gives the length of the record. Sequential files always have a record length (LRL) of 1.

When you ask for a listing of a file, the computer numbers each record as it is listed, and prints the heading showing the relative position of each byte in the record.

After you have opened or created the file and placed your data in it, you must close the file when you have finished with it. Otherwise you may lose its contents. The close statement looks like this: CLOSE 1.

Close statements tell the computer to shut files through the same buffer used to open them. If you opened a file through buffer 2, you would say: CLOSE 2.

Program Listing 1 creates a sequential file using these lines. The program is self-documenting and does not require any action on your part to make it work. Study this listing carefully and

The "LC" Compiler provides a substantial subset of the C programming language with:

- o Integer subset of C; has access to floating point ROM routines via functions
 - o All statements supported except: SWITCH-CASE, GOTO, TYPEDEF, STRUCT, UNION.
 - o All operators except ">", "=", sizeof, (typename).
 - o Standard I/O redirection with device independence.
 - o Input using FGETS or GETS functions support JCL.
 - o Dynamic memory management.
 - o Sequential files open for: READ, WRITE, and APPEND.
 - o LC Generates Z-80 EDAS-IV source code as output.
 - o Z-80 "source" libraries in ISAM-accessed PDS files.
 - o Compact, one-line compiler invocation for easy use.
 - o Compiled programs run on both Model I and Model III
 - o IN/LIB accesses graphics and LDOS entry points.
 - o LC/LIB includes: FPRINTF, PRINTF, ALLOC, FREE, SBKR, and String functions.
 - o LC: The Mod I/III version includes: LC/CMD, LC/LIB, FP/LIB, IN/LIB, EDAS-IV, XREF, and more than 200 pages of documentation. Requires 2-drive 48K LDOS.
- Mod 163 for LDOS: \$150+\$45

EDAS, Version IV is the most fantastic absolute address assembler. It has:

- o Assemble to disk or memory from multiple source files nestable to FIVE levels.
 - o Assemble conditional code with IF, IFLT, IFEQ, IFGT, IFDEF, IFNDEF, IFREF to 16 levels with IF-ELSE-ENDIF
 - o Automatic search of SOURCE subroutine libraries saved in ISAM-accessed structure to resolve references left undefined (requires PDS).
 - o One-level MACROs support parameter substitution by position and by keyword.
 - o Local labels in both MACRO expansions & PDS searches.
 - o Supports +, -, *, /, .MOD, .AND., .OR., .NOT., .XOR.
 - o Constants can be declared as base 2, 8, 10, & 16 or string, with more than one value on a single line.
 - o 15-char labels including special chars: @, ?, \$, _
 - o Extensive cross-reference utility & EQU generation.
 - o Enter source in upper case or lower case. Line editor has COPY, CHANGE, and MOVE
 - o Pseudo-ops LORG, COM, PAGE TITLE, SUBTTL, SPACE.
- Model I/III for LDOS: **\$100**
 Model II for TRSDOS: **\$200**
 Add \$4 S&H + 4% VA tax.

follow the logic flow before you attempt to run it.

I suggest you take a disk with TRSDOS on it and type in this program. When you are at the TRSDOS Ready mode, make sure to type in: BASIC -F:2.

All TRS-80 models allow you to have either fixed-length (FLR) or variable-length (VLR) records. The command above lets you access Basic on the Model II with two file buffers open. You can then specify the length of the record in the open statement.

The procedure is different on the Model I or III. At the TRSDOS Ready mode you must type: BASIC. After you press enter, TRSDOS loads Basic and prompts: HOW MANY FILES? If you enter a number, you allow for that number of fixed-length (FLR) files. If you want to have variable-length (VLR) files, add the suffix V (for variable) to the number: 2V, for example.

When you open the file for the first time in your program, you can set the record length. But, if you attempt to run any program that accesses a data file without specifying how many files you want open, a BN ERROR message appears for attempting to access a file without preparing the system when Basic was started up.

Program Listing 2 opens and reads the data you put into the file called SAMPLE/FIL. Look at the open statement: OPEN "I" 1, "SAMPLE/FIL". It opens the file and specifies that the file be for input only; that is, the data is taken from the disk and placed into memory.

As in the previous example, you can use the same buffer because the file you want to read has been closed.

Since there is data in this file and you want to read all of it, you must now set up a check condition. This condition checks for the end of the file, EOF. You don't want the computer to attempt to read past the EOF because if it does, you get an error message: EOF ERROR in line nnn. Your check line, then, should look like this: IF EOF(1) THEN 340. Use a conditional branching statement to set up the check condition. This is followed by the expression EOF(1) which tells the computer that if the end of file is reached through Buffer 1 while it is reading the contents of the file, then it must go to line 340 and do what it says there.

Line 340 tells the computer to close the file through Buffer 1, and then to end the program.

Follow this with the statement that goes after the information in the file;

since this is an input file, your line looks like this: INPUT #1, A,B,C.

The line tells the computer that you want to enter data stored under A, B, and C into the memory via Buffer 1.

You need not use the same variable names for input as you did for output. The assignment of variable names is up to you, although I do suggest you keep your names consistent if only to prevent confusion.

Another way to recall the data in a file is through the use of the statement: LINEINPUT # buffer number, variable name.

All TRS-80s can use this statement, which translates into "read a line of text from disk." This is useful when you want to read an ASCII-format Basic program file, or when you want to read in a string of data without following the restrictions regarding leading characters or delimiters. LINEINPUT # reads everything from the first character up to

a carriage return character (CHR\$(13)) not preceded by a line feed character, the end-of-file, or the 255th data character.

Any other delimiters encountered are included in the string. You can use this to read each line of a program that is stored in a sequential file. This works very well if you need a program to compare the contents of one file with another.

Line 260 tells the computer to print the contents of the file on the screen. This is followed by the start of a simple loop, using the unconditional branching statement, GOTO. This loop continues until all the data is read. Of course, this file must also be closed.

Program Listing 3 shows a program that lets you add additional data to an existing file. This is done by transferring the old data to a temporary file, adding the new data, and then writing the whole thing back into the original file.

TURN YOUR BILLABLE TIME INTO RECEIVABLE CASH FASTER, MORE EFFECTIVELY WITH DATA-TIMER TIME ANALYSIS AND BILLING.

Radio Shack
IBM
CP/M

DAY-TIMERS, INC.
Subsidiary of BEATRICE FOODS CO.

ALLENTOWN, PA 18001

Data-Timer is the brand new computer program that manages your billable time and resources more accurately and more profitably. And it's so simple to use. Used in conjunction with your Day-Timer™ Diary, Data-Timer is the ideal package for:

business executives	physicians (either
consultants	individual or
accountants	group practice)
attorneys	medical therapists or
engineers	anyone who bills on
architects	an hourly basis
advertising execs	

Quick Reference Guide; and a pad of 350 Data Entry forms. And Data-Timers works on your Radio Shack™ TRS-80 Models 11, 12 and 16; IBM™ Personal Computer and System 23 Datamaster; and CP/M. Minimum requirements: 64K of memory, 225K of disk storage total. And every Data-Timer Package is backed by our 100% Guarantee of Satisfaction.

What your Data-Timer will do for you!

***SAVE TIME**—free your computer for other uses—You or your secretary can enter all the required information from your Day-Timer™ Diary in real time or in just a few minutes at the end of the day.

***KEEP FAST AND ACCURATE RECORDS**—Data-Timer allows you to increase the speed, accuracy, and efficiency of your client time-accounting and billing procedures.

***GIVE INSTANT ACCESS TO CLIENT FILES**—Data-Timer displays or prints out a detail and/or summary report of all services performed for clients; also gives project status reports.

***PROVIDE PASSWORD PROTECTION**—Data-Timers built-in security system is designed to prohibit unauthorized access to the information stored on the program.

***PROVIDE DATA SELECTION BY JOB OR CLIENT**—With status reports on ACTIVE, COMPLETED, and NON-BILLABLE groups. Information can be accessed in detail or summary form. And Data-Timer offers a special Personalized Disk System, providing up to ten automatically applied job-rate codes, capacity of up to 99,999 jobs and clients and up to 17 separate time accounting entries for each day's files. The Multi-Disk feature of Data-Timer allows each user to define as many unique disks as required for his or her specified volume of work. And you can start with any month and run for one full year! Data-Timer was developed by Data-Systems Company and Day-Timer Corp., a division of Beatrice Foods, "the leader in time management systems".

Each Data-Timer Package comes complete with a Program Diskette; easy-to-follow Program Document, Day-Timer™ one full year desk scheduler, and User's Manual; a

SO DON'T STRUGGLE WITH YOUR BILLABLE TIME— MANAGE IT MORE EFFEC-

TIVELY WITH DATA-TIMER. Data-Timer is marketed nationally thru Day-Timer Corporation, Wayne Green, Inc., and Data Systems Company. Regional Customizing Centers are available for unique personalized requirements. To order your Data-Timer Package, simply use the coupon below or call toll free 1-800-258-5473 and use your Master Card, Visa, or American Express. For additional information on what Data-Timer can do for you, check the appropriate box on the coupon. See your local dealer.

Data-Timer—It will turn your billable time into receivable cash faster, more effectively than you ever thought possible. Dealer inquiries invited.

You must do this with sequential files because if you open a file for output, the contents are lost.

These three programs should get you started in the right direction with se-

quential files. I suggest that you use these to create some programs for your own use.

Let me know if this article helped you in any way. Please enclose a self-ad-

ressed, stamped envelope for a reply, if desired. ■

\$54.95 for COMPLETE SET

A hhhh, instant relief! At last there is a permanent cure for contact oxidation on Model I edge connectors. Many TRS-80 users are familiar with the symptoms: untimely resets, spontaneous reboots, or the inability to get the computer started at all without a frustrating session with a pink eraser.

The Gold Plug 80 is a well made device consisting of an edge-card plug with gold plated contacts, available with either 34 or 40 contacts. The rear of the plug has ter-

minal tabs which fit exactly over the existing foil fingers on the TRS-80's connectors. After installation, the original plugs have been extended about a half inch, meaning that the plastic door covers no longer fit. This did not trouble me, but you should take it into consideration. E.A.P.'s advertising leaflet, by the way, cautions you about the doors, which is refreshing. They also have the excellent policy of permitting you to return any plugs ordered for a refund if after seeing them you are un-

willing to undertake the installation.

An excellent set of instructions accompany the plugs, and they are shipped promptly. I ordered mine by mail on a Monday and received my set of plugs by first class mail on Tuesday of the next week.

Installation

Installation requires a soldering iron (I use a 40-watt Weller), Rosin-core solder, a Phillips screwdriver, and your last Pink Pearl. The keyboard and Expansion Interface have to be disassembled to get at the connectors, which are then cleaned—the eraser's last fling. The Gold Plug 80 is fitted over the existing plug with the contacts centered, and then soldered to the board. I have some soldering experience, but it proved to be an easy, safe job. The contact is heated, a very small amount of solder applied, and then you go on to the next contact. It took about an hour to do all six plugs.

If you are a little nervous about this kind of work, note that all the contacts on the underside of the RS-232 output connector are grounded—that is, they are all connected. Start there; you can do no harm and the practice will be helpful.

The Gold Plug 80 set I bought included all six plugs. The plugs are available individually for \$9.95, or you can get a pair for the keyboard to Expansion Interface cable for \$18.95.

As I said earlier, I did resolder every connector on the machine, and I haven't had a single unwanted reset since. ■

"No, we're all okay, but our computer's gone."

It could have been a lot worse.

Luckily, all that was missing was the computer and some spreadsheet software. And that should be covered by insurance.

But it isn't. Ed didn't realize that once he started using his home computer on business projects, his homeowners insurance no longer would cover it.

As suddenly as the robbery had occurred, Ed found himself out several thousand dollars with no way to recover it.

You need SAFEWARE™

If you use your microcomputer for business, you can protect yourself from a loss like this with SAFEWARE. For as little as \$35 a year, SAFEWARE insurance covers all hardware, media and purchased software. Both business and personal.

SAFEWARE protects against theft, fire, accidental damage, even the destruction caused by power surges.

And, now, SAFEWARE is available on a 10-day trial basis. If you are not completely satisfied with the coverage provided, return the policy within 10 days for a full refund.

The only risk you take with SAFEWARE is not having it.

To obtain more information, or bind coverage immediately, call the toll free number. Or send the coupon to: Columbia National General Agency, 88 E. Broad St., Columbus, Ohio 43215 (In Ohio call toll free 1-800-848-2112).

Aerocomp's Proven Best-By Test! The "DDC"

Double Density Controller

★ Technical Superiority

At last! A double density controller for Model I with HIGHER PROBABILITY OF DATA RECOVERY THAN WITH ANY OTHER DOUBLE DENSITY CONTROLLER ON THE MARKET TODAY! The "DDC" from Aerocomp. No need to worry about the problems that keep cropping up on existing products. AEROCOMP'S new analog design phase lock loop data separator has a wider capture window than the digital types currently on the market. This allows high resolution data centering. The finest resolution available with digital circuitry is 125 ns (nano seconds). The "DDC" analog circuit allows infinitely variable tuning. Attack and settling times are optimum for 5-1/4 inch diskettes. The units presently on the market use a write precompensation circuit that is very "sloppy". Board to board tolerance is extremely wide - in the order of ± 100 ns. The "DDC" is accurate to within ± 20 ns. The bottom line is state of the art reliability!

★ Test Proven

Tests were conducted on AEROCOMP'S "DDC", Percom's "Doubler A" and "Doubler II" and LNW's "LNDoubler" using a Radio Shack TRS80 Model I, Level 2, 48 K with TRS80 Expansion Interface and a Percom TFD100 disk drive (Siemens Model 82). Diskette was Memorex 3401. The test diskette chosen was a well used piece of media to determine performance under adverse conditions. The various double density adapters were installed sequentially in the expansion interface.

The test consisted of formatting 40 tracks on the diskette and writing a 6DB6 data pattern on all tracks. The 6DB6 pattern was chosen because it is recommended as a "worst case" test by manufacturers of drives and diskettes. An attempt was then made to read each sector on the disk once - no retries. Operating system was Newdos/80, Version 1.0, with Double Zap, Version 2.0. Unreadable sectors were totalled and recorded. The test was run ten times with each double density controller and the data averaged. Test results are shown in the table.

★ Features

TRS80 Model I owners who are ready for reliable double density operation will get (1) 80% more storage per diskette, (2) single and double density data separation with far fewer disk I/O errors, (3) single density compatibility and (4) simple plug-in installation. Compatible with all existing double density software.

★ Value **\$139.95**
for the Best DD Controller on the market.

FREE TRIAL OFFER

Use your AEROCOMP drive for up to 14 days. If you are not satisfied for ANY REASON (except misuse or improper handling), return in the original shipping container for a full purchase price refund. Applies to hardware only. Sorry, we cannot refund on software. We have confidence in our products and we know you will be satisfied.

WARRANTY

We offer a six months warranty on parts and labor against defects in materials and workmanship. In the event service becomes necessary for any reason, our service department is fast, friendly and cooperative. Our goal is 48 hour turnaround on all warranty or repair drives!

100% TESTED

AEROCOMP disk drives are 100% subjected to burn-in and bench test. We even enclose a copy of the test check list, signed by the test technician, with each drive. AEROCOMP means reliability!

ORDER NOW!

Order by mail or call TOLL FREE TO THE NUMBERS BELOW. Please note toll free lines will accept orders only. We accept VISA or MASTERCARD. Be sure to include card number and expiration date. Model II Real-World Input/Output

by J.J. Barbarello

This Model II capacitance meter lets your computer communicate with the outside world. It's inexpensive and simple to build, too.

Most people think of the TRS-80 Model II solely as a business machine. Trading up from a Model I implies that you give up all thought of interfacing with the outside world. But you'll see this is far from the case.

It's true that the Model II doesn't have the Model I's now-famous audio cables that allow you to connect it to almost anything. But it does have something just as good (or better).

The Model II's I/O (input/output) facility is its line printer port. You might consider the parallel printer port as just a way to get a printout, but to the Model II it's just another I/O port.

This article describes the construction of a computerized Capacitance Measuring Interface (CMI), a device that assures the appropriate I/O electrical signals come from and go to the computer.

The CMI measures capacitors as low as one picofarad or as high as 20 microfarads. Add to that the computer's capability to store results, use measured values in computer-aided design, and perform go-no go testing and you have capabilities that cost thousands of dollars on today's market.

For those of you with an interest in electronics as well as computers, a capacitance meter is an invaluable piece of test gear. You probably don't own one, however, because you wouldn't use it

enough to justify its cost. Like me, you probably select a marked capacitor and hope that its true value isn't too far off.

The Capacitance Measuring Interface changes all that. When you complete this project, you'll have an important, useful test instrument as well as an understanding of how to interface your Model II to the outside world.

Measuring Capacitance

The standard capacitance measuring scheme determines the time needed for an unknown capacitor to charge to a predetermined level. This time is then converted into a capacitance value.

The CMI uses the same principle. If you connect a 555 Timer IC as shown in Fig. 1 and trigger it with a negative-going pulse, pin 3 immediately rises to the supply voltage ($V+$). It stays at $V+$

for a time equal to $1.0986 \times (C_X) \times R$ seconds. This time is independent of supply voltage and, if R is constant, is always the same for a given capacitor. We then determine C_X by accurately measuring the length of the positive pulse present at pin 3 (since $C_X = \text{duration of pulse} / (1.0986 \times R)$).

The CMI Circuit

Referring to the CMI schematic in Fig. 2, notice that IC1 is a 555 Timer IC connected like the one in Fig. 1. The duration of IC1's output pulse depends on C_X and the value of the timing resistor $R3$ or $R4$ (selected by rotary switch $S1a$). IC2 remains unaffected by the positive transition of IC1's output. But when the pulse from IC1 ends, this negative transition is transmitted through C1 and triggers IC2. As a result, IC2 produces a fixed-duration, positive-going pulse to J2.

In review, IC1's output pulse starts when a positive-going trigger is provided to Q1 (since the trigger is inverted by Q1 and turns on IC1). Also, you can tell when IC1's output has ended by the presence of a positive pulse at J2. All you need do now is have the computer provide the trigger pulse and count until it senses a pulse at J2.

THOR POINT OF SALE SYSTEMS

One or more THOR POS registers can be configured to work with a single Model I/III computer or our THOR Local Area Network described below.

HARDWARE:

- Up to 64 user configurable keys.
- Adjustable tilt video monitor displaying 16 lines of 32 characters.
- 20 character per line alphanumeric printer (40 optional).
- Adjustable 8 digit numeric LED display.
- Cash drawer with manual (key) and automatic opening.
- RS-232 interface to Model I/III or other types of computers.
- Optional bar/OCR code scanning, scales and other peripherals.

SOFTWARE:

- Register functions under control of a master computer such as a TRS-80 Model I/III or a THOR Local Area Network.
- Automatic price lookup with product descriptions for over 65,000 items when using a Winchester disk such as the THOR model described below.
- Optional inventory control with automatic depletion at the time of sales and generation of below minimum stocking lists.
- Optional automatic entry of sales into a general ledger system.
- Common manager reports for sales, voids, discounts, etc.

The THOR POS hardware and standard software from \$1799.

SUPPORTING HARDWARE FOR THE THOR LAN

- Printer Interface. Supports Centronics parallel style printers
- Serial printer interface.
- Smart modem capable of running application programs under remote command.
- THOR Z-80 based 64k Work Station—a low cost alternative LAN station compared to existing microcomputers.

SPECIALITY SOFTWARE FOR THE THOR LAN

Classroom Manager System
Now you can maintain rosters, grades, attendance and miscellaneous records for your classes (up to 99 students per class). Our test module allows you to create any number of multiple choice, true/false, essay or fill-in-the-blank questions in any combination. Finally our test administration module allows you to print out or directly administer a random set of test questions via the computer. Automatic scoring, statistics about your students and other features make this the most comprehensive software available at this price \$199

Propane Distribution Order/Invoice/Statement Processing System
If you are interested in this or a related business contact WMS for more information.

Medical/Chiropractic Office Practice System
A comprehensive low cost system for the one doctor or small clinic. Includes records, histories, invoices, word processing and more functions too numerous to reference. Call for a detailed brochure.

WMS Will Pay You To Use Our THOR Systems
If you have a specialized vertical market requirement and are willing to be a development/test site, WMS will contract to pay you a royalty for every additional sale of the resultant software.

Contact our technical staff for more information concerning what a THOR LAN system with specialized peripherals and software can do for you.

THOR WINCHESTER DISK DRIVES

- Disk capacity of up to 40 megabytes or more for your Model I/III computer. Available in fixed and/or removable drive versions.
- External mounting in a two-drive case as shown or internal mounting.
- Each THOR System comes with a two drive controller and interface to your Model I/III.
- Software available includes an optional operating system (LDOS or NEWDOS-80) and diagnostics.
- The THOR Local Area Network can be field installed. (See below).

THOR Winchester Disk Drive System from \$1299

THOR LOCAL AREA NETWORK (LAN)

A new concept is emerging. An LAN now makes it possible for the smallest business or school to have multi-processing with shared access of common files on a Winchester disk.

The THOR LAN extends this concept. The THOR LAN allows the use of various microcomputers which you already own so that your present investment is not made obsolete. Hardware/software interfaces are available for TRS-80, Apple and Atari. IBM and Commodore are coming soon. The THOR LAN can support up to 254 users with over 4,000 feet of cabling. Ten conductor ribbon cable allows easy addition of new computers. Speeds of up to one megabit per second are possible. File protection is available with multiple users having the option to access any authorized information.

LAN capabilities can be added to the THOR Winchester Disk System described above for just a small additional cost.

THOR LAN Hardware/Software from \$2699

TRSDOS is a trademark of Tandy Corp. LDOS is a trademark of Logical Systems, Inc. NEWDOS-80 is a trademark of Apparat, Inc.

Prices are cash—Visa/Mastercard/American Express/COD available for a small additional charge.

Dealer enquiries welcome.

AARDVARK

TRS-80 COLOR

COMMODORE 24

VIC-20

SINCLAIR/TIMEX

TI99

QUEST — A NEW IDEA IN ADVENTURE GAMES! Different from all the others. Quest is played on a computer generated map of Alesia. Your job is to gather men and supplies by combat, bargaining, exploration of ruins and temples and outright banditry. When your force is strong enough, you attack the Citadel of Moorlock in a life or death battle to the finish. Playable in 2 to 5 hours, this one is different every time. 16k TI99, TRS-80 Color, and Sinclair, 13K VIC-20. \$14.95 each.

32K TRS 80 COLOR Version \$24.95.

Adds a second level with dungeons and more Questing.

CATERPILLAR

O.K., the Caterpillar does look a lot like a Centipede. We have spiders, falling fleas, monsters traipsing across the screen, poison mushrooms, and a lot of other familiar stuff. COLOR 80 requires 16k and Joysticks. This is Edson's best game to date. \$19.95 for TRS 80 COLOR.

ADVENTURES!!!

The Adventures below are written in BASIC, are full featured, fast action, full plotted adventures that take 30-50 hours to play. (Adventures are interactive fantasies. It's like reading a book except that you are the main character as you give the computer, commands like "Look in the Coffin" and "Light the torch.")

Adventuring requires 16k on Sinclair, TRS-80, and TRS-80 Color. They require 8k on OSI and 13k on VIC-20. Sinclair requires extended BASIC. Now available for TI99. Any Commodore 64.

\$14.95 Tape — \$19.95 Disk.

ESCAPE FROM MARS

(by Rodger Olsen)

This ADVENTURE takes place on the RED PLANET. You'll have to explore a Martian city and deal with possibly hostile aliens to survive this one. A good first adventure.

PYRAMID (by Rodger Olsen)

This is our most challenging ADVENTURE. It is a treasure hunt in a pyramid full of problems. Exciting and tough!

DERELICT

(by Rodger Olsen & Bob Anderson)

New winner in the toughest adventure from Aardvark sweepstakes. This one takes place on an alien ship that has been deserted for a thousand years — and is still dangerous!

Dungeons of Death — Just for the 16k TRS-80 COLOR, this is the first D&D type game good enough to qualify at Aardvark. This is serious D&D that allows 1 to 6 players to go on a Dragon Hunting, Monster Killing, Dungeon Exploring Quest. Played on an on-screen map, you get a choice of race and character (Human, Dwarf, Soldier, Wizard, etc.), a chance to grow from game to game, and a 15 page manual. At the normal price for an Adventure (\$14.95 tape, \$19.95 disk), this is a giveaway.

WIZARDS TOWER — This is very similar to Quest (see above). We added wizards, magic, dragons, and dungeons to come up with a Quest with a D&D flavor. It requires 16k extended color BASIC. \$14.95 Tape, \$19.95 Disk. VIC 20 Commodore 64.

NEW

PLANET RAIDERS — Not just another defenders copy, this is an original program good in its own right. You pilot a one man ship across a planetary surface dogfighting with alien ships and blasting ground installations while you rescue stranded troopers. Rescue all the troopers and be transported to another harder, faster battle. Joysticks required. ALL MACHINE CODE! EDSON'S BEST! 16K Tape TRS80COLOR \$19.95 — 32K Disk \$21.95.

BASIC THAT ZDOOMMS!!

AT LAST AN AFFORDABLE COMPILER!

The compiler allows you to write your programs in easy BASIC and then automatically generates a machine code equivalent that runs 50 to 150 times faster.

It does have some limitations. It takes at least 8k of RAM to run the compiler and it does only support a subset of BASIC—about 20 commands including FOR, NEXT, END, GOSUB, GOTO, IF, THEN, RETURN, END, PRINT, STOP, USR (X), PEEK, POKE, *, /, +, -, >, <, =, VARIABLE NAMES A-Z, SUBSCRIPTED VARIABLES, and INTEGER NUMBERS FORM 0-64K.

TINY COMPILER is written in BASIC. It generates native, relocatable 6502 or 6809 code. It comes with a 20-page manual and can be modified or augmented by the user. \$24.95 on tape or disk for OSI, TRS-80 Color, VIC 20, or Commodore 64.

SEAWOLFE — ALL MACHINE CODE In this high speed arcade game, you lay out patterns of torpedoes ahead of the attacking PT boats. Requires Joysticks, at least 13k RAM, and fast reflexes. Lots of Color and Sound. A fun game. Tape or Disk for Vic20, Commodore 64, and TRS-80 Color.

\$14.95 Tape - \$19.95 Disk.

Dealers — We have the best deal going for you. Good discounts, exchange programs, and factory support. Send for Dealer Information.

Authors — Aardvark pays the highest commissions in the industry and gives programs the widest possible advertising coverage. Send a Self Addressed Stamped Envelope for our Authors Information Package.

Adventures and Quest now available for TI99

Please specify system on all orders

ALSO FROM AARDVARK — This is only a partial list of what we carry. We have a lot of other games (particularly for the TRS-80 Color and OSI), business programs, blank tapes and disks and hardware. Send \$1.00 for our complete catalog.

The one-size-fits-all computer magazines fall flat!

Time was when you could pull any computer magazine off the rack and it would suit your purpose.

Not anymore. Today, you need a magazine that is tailor-made for your system, a magazine designed to fit your computing needs, a magazine that lets you move freely to expand your knowledge of computing and to use your computer to its *fullest* capacity.

For users of Radio Shack computers, *that* magazine is **80 MICRO**. No other computer magazine *in the world* provides more useful information on the TRS-80* than **80 MICRO**. In 1982 alone, **80 MICRO** published over 5000 pages containing informative articles; useable programs and helpful tips; hardware, software, and book reviews; new product announcements; science, business, and home-use applications; Color Computer* information; tutorials; utilities; and games.

80 MICRO is the largest single source of information for your TRS-80. No one else even comes close—not even Radio Shack. Because **80 MICRO** is not affiliated with the manufacturer, you get unbiased, independent reporting on the latest happenings and innovations.

If you use a TRS-80 Color Computer* you'll want **HOT CoCo** magazine too! **HOT CoCo** is the new information-packed journal for color system users. The combination of **HOT CoCo** and **80 Micro** is a sure—fire winner.

*TRS-80 and TRS-80 Color Computer are trademarks of Radio Shack, a division of Tandy Corp.

Send in the attached card today, use the coupon below or call toll free **1-800-258-5473**.

Stop buying those ill-fitting computer magazines off the rack. Subscribe to **80 MICRO** and get the magazine that's tailor-made for you.

I want the magazine that's tailor-made for me.
Send me 12 issues of **80 MICRO** for only \$35.97.

REMSOFT, INC.

Let Your TRS-80® Teach You ASSEMBLY LANGUAGE

Tired of buying book after book on assembly language programming and still not knowing your **PDP** from your **PUSH**?

REMSOFT proudly announces a more efficient way, using your own TRS-80® to learn the fundamentals of assembly language programming . . . at YOUR pace and YOUR convenience.

Our unique package, "INTRODUCTION TO TRS-80® ASSEMBLY PROGRAMMING", will provide you with the following:

- Ten 40 minute lessons on audio cassettes
- A driver program to make your TRS-80® video monitor serve as a blackboard for the instructor.
- A display program for each lesson to provide illustration and reinforcement for what you are hearing.
- Step-by-step dissection of complete and useful routines to test memory and to gain direct control over the keyboard, video monitor, and printer.
- How to access and use powerful routines in your Level II or Model III Basic ROM

AVAILABLE FOR MODEL 1 & 3

REMASSEM (tape) \$74.95
REMASSEM (disc) \$79.95

LEARN TRS-80® ASSEMBLY LANGUAGE DISK I/O

Your disk system and you can really step out with REMSOFT'S Educational Module, REMDISK-1, a "short course" revealing the details of DISK I/O PROGRAMMING using assembly language. Intended for the student with experience and assembly language.

COURSE INCLUDES:

- Two 45-minute lessons on audio cassette
- A driver program to make your TRS-80® video monitor serve as a blackboard for the instructor.
- A display program for each lesson to provide illustration and reinforcement for what you are hearing.
- A booklet of comprehensive, fully commented program listings illustrating sequential file I/O random-access file I/O and track and sector I/O.
- A diskette with machine readable source codes for all programs discussed in both Radio Shack EDTASM and Macro formats.
- Routines to convert from one assembler format to the other.

Presently available for Model 1 only
REMDISK-1 only \$29.95

Dealer inquiries invited

These courses were developed and recorded by Joseph E. Willis and are based on the successful series of courses he has taught at Meta Technologies Corporation, the Radio Shack computer Center, and other locations in Northern Ohio.

Program Listing 2

BP2, S1 and B1 as shown in Fig. 3c.

Place S1 to the off position and snap a 9-volt battery into B1. Mount the completed CMI in any suitable case or use it as is. Finally, mount a suitable control knob on S1, positioning the marker at the off position.

With the CMI complete, you must fabricate a connecting cable. The cable consists of two 1/8-inch phono plugs at one end, a 34-pin female header (made from AP Products', part number 929975) at the other, and a three-conductor cable interconnecting them as shown in Fig. 4. When the connecting cable is made, your CMI is complete.

Using the CMI

Enter the machine-language program (with an Editor/Assembler or the TRSDOS Debug facility). Save this program under the name "MODIICMI".

Now enter and save the Basic program using the name "CMI". Type RUN"CMI" and press enter. After a short time, the screen clears and the CMI meter appears on the screen.

Now attach the connecting cable to the parallel printer channel and the CMI. Obtain a marked, known-value capacitor of about 0.1 µF and attach it to the CMI binding posts. Place the range switch to the LO position. At the bottom of the screen you should see the prompt RANGE? . . . Press the I key. Immediately after the prompt, you should see "MEASURING" in reverse video. After some time, the measured value appears in the display above the prompt (EX: 0.094 µF). Place the range switch to HI and press 2 on the keyboard. Again, "MEASURING" appears. Next, the previous measurement disappears and is replaced by the new

MAGAZINE
INC.

Figure 3

Figure 4

measured value (EX: 0.09 μ F).

At this point, try measuring any other capacitors you wish. You must adhere to two rules, however. First, always press the number corresponding to the range set for the CMI. For instance, pressing 2 when the CMI is set to the LO range results in an erroneous reading. Second, when measuring polarized capacitors (such as electrolytes), always connect the positive (+) lead to the red binding post and the negative (-) lead to the black binding post.

If you attempt to measure a capacitor that is larger or smaller than the selected range, the message <OUT OF

RANGE> blinks in the display area. Simply change ranges and try again. If the <OUT OF RANGE> message appears after trying both ranges, the capacitor is either larger than 20 μ F, or is defective.

When you finish with the meter, place the range switch to the off position and press the keyboard's F1 key in response to the screen's RANGE?... prompt. The display area clears, the message "METER OFF" appears and the program ends.

Calibration

Calibration corrects the CMI circuit's

stray capacitances and deviation from nominal values of R3 and R4. All factors to be calibrated are contained in line 80.

To begin calibration, enter the following: 105 PRINT@(22,0),"FACT-OR=";X. Run the program with the CMI on the LO range (#1) and no capacitor connected. Press 1 for "RANGE?..." and the factor indicated (<OUT OF RANGE> appears). This is Z(1). Repeat for the HI range (#2). The factor that appears is Z(2). Now measure R3 (EX: 10.9 megohms). This is VR(1) (EX: 10.9). Repeat, measuring R4 (EX: .0973 megohms) which

is VR(2). Modify the present line 80 values of Z(1), Z(2), VR(1), and VR(2). Delete line 105 and save the program.

Place the range switch to the off position when the CMI is not in use to extend the battery life.

You may want to program your own application (such as go-no go testing, computer-aided design, and data retention on disk file) using the CMI. The basic procedure is short and simple.

After loading "MODIICMI" and performing a DEFUSR4=&HF050; DEFUSR5=&HF07C, your program then executes the X=USR4(0) command. It determines the range (1 or 2) selected and then adjusts the variable X using the formula: $X = X - Z(RNG\%)$. (NOTE: The variable RNG% should previously have been assigned the range number selected.) You then calculate $X = X / (VR(RNG\%) * MULT)$ to determine the value (in μF). Use the measured value in any subsequent process you wish. When the CMI is no longer necessary, your program should execute an X=USR5(0) to return the prime pin's logic level to "normal." ■

J.J. Barbarello lives at R.D. #1, Box 241H Tennent Road, Englishtown, NJ 07726.

Dot Writer Ver. 1.5

FEATURES:

- ★ GEAP CHARACTER FONTS
- ★ CREATE HI-RES DRAWINGS WITHOUT TRS-80 MODIFICATIONS OR PROGRAMMING KNOWLEDGE
- ★ CREATE OR MODIFY FONTS
- ★ TRUE PROPORTIONAL LETTER/LINE SPACING

- ★ PRINT TIME OPTIONS SUCH AS MAGNIFY, DOT SPACING CONTROL, REVERSE CHARACTERS, UNDERSCORING, TRUE PROPORTIONAL PRINT
- ★ BLOCK GRAPHICS ON R/S LPV & VI, OKIOATA MICROLINE, EPSON, PROWRITER, NEC 823A HI-RES GRAPHICS ON EPSON, PROWRITER, NEC 8023A.

- ★ COMPATIBLE WITH MOST DOS'S
- ★ WORKS WITH MOST WORD PROCESSORS
- ★ WORKS WITH TRS-80 MODELS 1 & III
- ★ SUBSCRIPT, INTERMIX FONTS AND HI-RES GRAPHICS ON THE SAME LINE
- ★ EXPANDED PRINT AND MORE!
- ★ USER FRIENDLY

You can create and print graphics like these - or you can choose from our library of over 60 type styles!

RCM Computers

221 Hirschfield Dr., Williamsville, N.Y. 14221 (716) 634-3026

GEAP - A graphics utility that allows easy creation of a graphic screen on your TRS-80. You use GEAP to create the graphic display, intermix text and input statements at will, and then let GEAP write a BASIC program to recreate the screen. GEAP contains numerous expansion modules that give you great power! GEAP allows graphic dumps on Epson, C.Itoh, Nec, R/S LPV and VI and Okidata printers. GEAP graphics can be translated into HI-RESOLUTION printer graphics or lettersets with the aid of Dot Writer!

DOT WRITER - A two part program. Part one translates GEAP screen graphics into HI-RESOLUTION printer graphics. Part two is a word processor that allows you to print your edited text using our special type styles or your own style that you created with GEAP. Edit text with most popular word processors. Follow our format which is similar to the NewScript format. Print with our script program for remarkable text control and beautiful, HI-RESOLUTION type styles. Type styles can be intermixed on a line or within a word. Over 50 format commands. Now supporting EPSON, C.ITOH PROWRITER 8510, PMC8510, NEC8023A. More ready soon!

GEAP & DOT WRITER **\$99.95**

ADDITIONAL LETTERSETS - We currently have 5 disks full of type styles for use with our program or with similar programs. Write for type samples. **ADDITIONAL LETTERSETS \$29.95 each**

MANIPULATION UTILITIES - NEW letterset manipulation utilities contain 12 utility programs to help you create type styles. These are the same utilities that we use!

MANIPULATION UTILITIES **\$39.95**

ARRANGER

100% Machine Language Disk Index Program for the TRS-80 Model I & III.
Automatically recognizes ALL major DOS's!

The Arranger is a master index system that automatically records the names of your programs, what disks those programs are on and type of DOS. Features include:

- Automatic single and double density recognition.
- Accepts LDOS, DOS+, TRSDOS, DBL DOS, NEWDOS 80, MULTIDOS...
- Works interchangeably with Model III, I double density.
- Capacity of 250 disks, 44 filenames disk
- Quickly locates any amount of free granules
- Finds a program in less than 30 seconds!
- Alphabetizes 1500 filenames in 40 secs.!
- Option to sort by any extension (.BAS, .CMD, ???)
- Easily updates diskettes previously added with only 2 keystrokes.
- Backup function built in.
- Uses 1 to 4 drives, 35, 40 or 80 tracks.
- Radio Shack doubler compatible

Requires 32k - 1 disk minimum

Reproduce finer shading levels.

The Printer as a Paintbrush— Part II

Mike Keller
13423 Desert Hills NE
Albuquerque, NM 87111

In Part I of this series (May 1983, p. 218) we learned to digitize block letters and line drawings, and reproduced images on two printers with dot-addressable graphics.

Because these images were black and white, our computer just needed to know whether an individual point on the graph was "on" or "off." Dark squares on the original image were represented as dots on the printout, and white squares were not printed at all. Digitizing a photograph, however, is not as cut and dried. A photograph

consists of many levels of shading, from white to grey to black.

Part II will consider the problem of reproducing several shading levels, so you can print a fairly close representation of a photo on your printer. Photo 1 shows a sample of the results you may expect. The printout was digitized from an 8 by 10 photograph. Also included in this part is a short Basic program that generates a miniature TRS-80 screen-print.

System Requirements

Other than a printer with dot-addressable graphics, no special hardware is needed to use the programs shown here. The programs were developed on a TRS-80 Model I with Disk Basic and 48K memory, but should work with 32K as well. As with the listings from last month, each program is shown in two versions: one for the NEC 8023 printer, and one for the Epson MX-80 with Grafix 80 installed. The routines shown for the NEC should work on the C.I.TOH 8510 or the ADS 8001.

Here's how we will approach digitizing a photo: First, several dot matrix patterns will be developed that produce different levels of shading when printed. Then we will divide the photo into small squares, and build data statements that contain a series of digits. Each digit will represent the shading level which best approximates that of a given square in the original photo. A program will then read the data and send it to the printer as a series of shading levels.

Decisions, Decisions

Several considerations must be balanced against one another when setting up our

Photo 1. Digitized 8 by 10 photograph

CONTROL DATA KEYBOARDS

- ★ Parallel ASCII
- ★ SPST Switching
- ★ FTZ Shielded Base
- ★ N-Key Rollover
- ★ 128 Character ASCII
- ★ Non-Slip, Non-Glare Keycaps
- ★ CDC752 Terminal Keyboards
- ★ Attractive Case

These Control Data Keyboards consist of a base, cover, the keyboard assembly, and an interface cable. Color (case): Harvest gold and black. Color (keycaps): Black, blue, and red. Electrical requirements: +5V @ 800mA, -12V @ 50mA. Weight: 8 lbs. All units brand new in original boxes, specifications included.

Keytronics 90-Key Soft-Programmable Keyboard

WITH SECURITY KEYLOCK SWITCH

• RF shielded	
• Cursor controls	
• Numeric keyboard	
• 8-bit Parallel	
• Capacitance keys	
• 10 user-programmable keys	
• Positive TTL Logic	
• Size: 17 1/2" x 8 1/2" x 2 1/4"	

Made for Visual Technology, this keyboard features: a security keylock (includes two keys) to guard against unauthorized use; an 11-key numeric keypad, cursor controls; and 10 user-programmable keys. Electrical requirements: +5VDC. Color (case): White. Color (keycaps): Black. Complete with case, keyboard assembly, 60-inch interface cable, and schematics.

Fig. 1. Shading level dot patterns for the NEC

Fig. 2. Sample printout from Listing 1a

programs. They center around two main issues: quality of the finished product versus the amount of time we are willing to spend in the digitizing process. The smaller the squares used to graph the photo, the higher will be the quality of the printout, but there are a couple of things to remember here. First, smaller blocks mean you will have a smaller matrix (fewer dots) to work with in developing the shading levels. Second, smaller blocks mean more blocks. In digitizing an 8 by 10 inch photograph using 1/24 inch squares, you would have to enter (manually) over 46,000 characters into the data statements! Even using some kind of file management to prevent an Out of Memory error, you would probably need a magnifying glass and the patience of Job to complete the project.

At the other extreme, representing an 8 by 10 photo with 1/4 inch squares would require only 1280 digital characters, and the graph would be easy to see and digitize. Unfortunately, the resolution would be so poor that many details of the photo would be missing. Another problem with such low resolution is stair-stepping—the zigzag appearance of any shading boundaries that run diagonally across the photograph.

Compromise

After experimenting with several block

sizes for the graph, I settled on 1/12 inch squares. The individual squares are large enough to keep track of during the manual digitizing, and the resolution is not bad. The use of 1/12 inch blocks also allowed me to design six distinct shading levels. This is enough to show some fairly subtle changes of shading within a photo. Photo 1 represents the results of this compromise. It is a printout of an 8 by 10 photograph digitized with 1/12 inch blocks. The printout was generated from 120 data statements, with each statement containing a 96-character string (11,520 characters in all). If this seems like a lot of work, it was. But the final result was worth the effort!

Shading Levels

Both the NEC and the Epson printers are capable of generating a 1/12 inch matrix of dots. On the NEC, the matrix will be eight dots wide by six dots tall, with the printer set to the Elite print style (96 dots per inch horizontally). On the Epson, we will be using a matrix 10 dots wide by six dots tall, in the 960 graphics mode (120 dots per inch horizontally). Because the horizontal dot spacing is not the same for the two printers, the dot patterns for the six shading levels will have to be unique to each printer.

Developing shading levels is not simply a matter of putting more ink or less ink on the

paper within each block. The dots must be uniformly spaced within the matrix, and the pattern used must be one that does not create a separate noticeable pattern when repeated over a large area. This gets a little tricky. Just when I thought a pattern would work for, say, light gray, it turned out that the pattern produced a distracting series of zigzagging dots when I printed several in a row. Even a pattern that caused no problem there might look like a group of small circles when printed one over the other.

Experimentation

Program Listing 1a (for the NEC printer) and Program Listing 1b (for the MX-80) were

“One problem with low resolution is stair-stepping.”

written to speed up the process of developing and testing dot patterns for various shading levels. Figure 1 shows some sample dot patterns for the 8 by 6 matrix on the NEC printer. The first pattern (1/48) uses only one of the 48 possible dots in the matrix, producing a very light shading. The last pattern (48/48 shading) prints all 48 dots of the matrix, for the darkest shading possible without using a smaller horizontal dot spacing mode. The remaining patterns produce intermediate levels of shading on this printer. The dot patterns for the MX-80 are not shown, but you can draw them yourself from the data statements in Listing 1b. Remember, the top pin of the MX-80 print head is treated as if it were bit 7 of an eight-bit binary number. This is the reverse of the NEC printer, which treats the top pin as bit 0.

In Fig. 1, the decimal values that generate each pattern are shown above the columns of dots. You can experiment with other patterns by changing the data statements in Listing 1, or by adding your own.

When you run the program it will print the individual matrices, and then combine several rows and columns of the patterns, as in Fig. 2. This gives you a chance to check for unwanted patterns that may appear when a matrix is repeated. On the printout, the decimal values for each pattern are printed in a horizontal row to the left of the dots. As an example, the decimal values 0,42,0,21,0,42,0,21 will generate the third matrix from the left at the top of the figure. Of course, these are the same values that were in the data statement, but it's good to have a hard copy that relates the

WHAT REALLY IS INSIDE YOUR COMPUTER?

Find out in **INSIDE YOUR COMPUTER** from Wayne Green Books. I.R. Sinclair takes the cover off your computer and shows you what's inside and what it does. Novices will find information on:

- Microprocessors
- Interpreters
- Registers
- Input/output
- Machine language
- Logic operations

A look at programming ties it all together—how hardware and software make a microcomputer work. The information applies to any microcomputer system. A glossary of computer terms and an appendix on binary, decimal, and hexadecimal conversion make the book all the more valuable.

\$12.97, softcover, 109 pp., 5½ x 8½.

decimal data to its visual pattern.

Even if you are not interested in trying out patterns of your own, I would recommend a little experimentation with different values so you will have a better idea of how this works.

Selecting a Subject

Now that six levels of shading are available on the printer, we can proceed with the project. The first step is to select an appropriate photograph. This should not be done casually, because you are going to spend several hours digitizing, and a poor choice can make the job more difficult. Here are some things to consider:

Avoid color pictures. You will be busy

"Use a photo that has a minimum of fine detail."

enough determining which levels of grey to use, without the added distraction of differentiating light blue and medium-dark yellow.

Use a photo that has a minimum of fine detail. A landscape scene where each blade of grass is visible may be pretty, but it might be impossible to show such detail in a 1/12 inch block. I encountered this when trying to digitize the subject's hair in my selected photo. The detail in that area was too fine to represent with 1/12 inch squares, so I simply used all dark blocks.

Avoid a photo with lots of subtle changes in shading. If one shade gradually changes to another over a large area of the photo, you will have to show this as a sharper boundary on your printout. An example of this can be seen in Photo 1 where there is a shadow on the subject's right cheek. This particular problem could be solved by developing more shading levels to choose from. In this case, I felt that the benefit would be small compared to the extra work.

A closeup portrait such as the one shown makes a very good subject. Although the eyes are fairly high in detail, they will be large enough on a closeup to be captured in digital form.

Most Important Step

After you have decided on a suitable subject, drop by the local print shop and have several photocopies made. You will be making lots of marks on a working copy, and you will need the original for comparison during the touch-up process.

Now take one of the copies and deter-

PRESERVE 80 MICRO WITH BINDERS & FILE CASES.

Keep your issues of 80 Micro handy and protected in
handsome and durable library file boxes or binders.
Both styles are bound in dark green leatherette with
the magazine logo stamped in gold.

File boxes: each file box holds 12 issues, with spines
visible for easy reference.

\$5.95 each, 3 for \$17.00, 6 for \$30.00

Binders: each binder holds 12 issues and opens flat
for easy reading.

\$7.50 each, 3 for \$21.75, 6 for \$42.00

(USA postage paid. Foreign orders must include
\$2.50 per item.)

Please state years desired (1980 to 1984).

Send check or money order to:

Jesse Jones Box Corp., P.O. Box 5120, Philadelphia,
PA 19141; please allow 6 to 8 weeks for delivery.
Sorry, no C.O.D. or phone orders.

Instant Spreadsheet

EASY-CALC

Turns your TRS-80*
into an electronic
spreadsheet, allowing
you to:

- write numeric data into
rows and columns on your
video screen.
- add, subtract, multiply,
divide or exponentiate single
values or complete rows and
columns.

EASY CALC contains a
unique programmable calcu-
lator that lets you:

- enter and save entire series of calculations.
- instantly execute calculations by touching
a single key.
- calculate percentages.
- summarize and label all rows or columns.

EASY CALC will handle up to 600 figures,
and you can print your work-sheet when-
ever you wish. Merge with Scripsit* and get
complete, professional reports.

What's After Basic?

If you ever wished that you had a better programming language, PASCAL 80 may be the language you dream about. It is a compiled language, faster, more accurate and easier to modify than Basic. Yet it is so easy to use that you can forget the hassles and diskette spinning of other compiled languages, including other versions of Pascal.

Now you can create your own command files that execute from DOS without having to load a language into the computer first, but do it with far less work than machine language. You can sell your compiled programs without any royalty payments!

Although designed for teaching and ideal for that purpose, PASCAL 80 also allows serious applications with a full fourteen digits of accuracy, even on log and trig functions!

PASCAL 80 allows you to create files on the TRS-80® Model I, Model III, LNW-80, PMC-80, or LOBO MAX-80 that will run on any of the other machines under TRS-DOS®, LDOS, NewDOS, NewDOS 80, DBL-DOS or DOS Plus.

PASCAL 80 is used in dozens of High Schools, Colleges, and Technical Schools, and has been favorably reviewed in Byte, Creative Computing, and other magazines.

You get all of this at a bargain price of only \$99 plus \$2 shipping. If you call and order by MasterCard or VISA, we will even credit you \$1 for the phone call. Call or send your check today!

HAVE YOUR CAKE AND EAT IT TOO WITH MICRO MAINFRAME

It has long been stated that you can't have your cake and eat it too, but **MICRO MAINFRAME** has now disproven that rumor.

If you purchase a **MICRO MAINFRAME** disk upgrade kit, you can still get a good deal. **ONLY MICRO MAINFRAME** has two double density disk controllers to choose from:

- Our **FDC-3B** Standard Grade controller is for single sided disk operation only and does not provide for 8" disk operation.
- Our **FDC-3C** Premium Grade controller is for double sided and/or 8" disk drives.

BOTH COMPLETE DISK UPGRADE KITS INCLUDE THE TEC 5" SINGLE SIDED, DOUBLE DENSITY TEC DISK DRIVE. Double sided drives will be available at extra cost. 8" drives are available from a number of vendors. Please inquire according to the stock numbers listed below:

DISK UPGRADE KIT INCLUDES CONTROLLER, SWITCHING POWER SUPPLY, INSTALLATION KIT, TEC DISK DRIVE AND COMPLETE INSTRUCTIONS.

FDC-3BKD (Standard Grade Controller)	\$ 349.95
FDC-3CKD (Premium Grade Controller)	\$ 399.95

DISK CONTROLLER PCBOARDS ARE AVAILABLE AS FOLLOWS.

FDC-3B (Standard Grade Controller)	\$ 79.95
FDC-3C (Premium Grade Controller)	\$ 99.95

CONTROLLER UPGRADE KIT (less drive) INCLUDES CONTROLLER, SWITCHING POWER SUPPLY, INSTALLATION KIT, AND COMPLETE INSTRUCTIONS.

FDC-3BK (Standard Grade Controller)	\$ 179.95
FDC-3CK (Premium Grade Controller)	\$ 199.95

MODEL-III ** COMPUTER COMPLETE WITH DUAL TEC DISK DRIVES, 48K RAM, AND A MICRO MAINFRAME FACTORY INSTALLED DISK UPGRADE KIT.

M32-1 Model-III ** with FDC-3BKD	\$1595.00
M32-2 Model-III ** with FDC-3CKD	\$1695.00

THE NEW DS-1A DATA SEPARATOR IS NOW AVAILABLE AND GIVES SUPERIOR DATA SEPARATION AND EXTENDS 8" DISK OPERATION TO ALMOST ANYONE'S DISK CONTROLLER!

If you are having difficulty with your disk controller, the problem may be the data separator. Micro Mainframe can provide data separators in your need. In selected controllers, we can give you a disk separator for FREE!

DS-1A Data Separator	\$ 39.95
----------------------------	----------

WHAT IS DIFFERENT ABOUT THE MICRO MAINFRAME CONTROLLER?

- **MICRO MAINFRAME** controllers have features that manufacturers haven't yet thought of.
- **MICRO MAINFRAME** includes how-to-on-permanent write longest period of time of any in the industry in a separate file. Thanks to our high volume production, we can offer the highest quality products at the most competitive price in the industry.
- **EVERY MICRO MAINFRAME CONTROLLER PRODUCED HAS INCLUDED GOLD PLATED CARD EDGE CONNECTORS FOR INCREASED RELIABILITY AT NO EXTRA COST.**
- **MICRO MAINFRAME IS FIRST TO USE THE STATE OF THE ART 9216 DATA SEPARATOR (FDC-3C ONLY).** We have proven this data separator is the full year no longer useful beginning with the very

first FDC-3C disk controller. Unlike other controllers, **NO ADJUSTMENTS ARE EVER REQUIRED TO OUR DATA SEPARATOR.**

- **MICRO MAINFRAME IS FIRST TO PROVIDE FOR 8" DISK OPERATION ON BOTH OUR FDC-3A and FDC-3C MODELS.**
- **MMF GIVES YOU A SYSTEM THAT CAN GROW WITH YOUR NEEDS,** from floppy disk systems to state of the art hard disk systems with full ECC and the industry's only SASI Multiplexer with our SASI-NET™.
- **MMF'S NEW 24 PAGE INSTALLATION MANUAL IS SECOND TO NONE.** Installing a disk upgrade kit from **MICRO MAINFRAME** is now easier than ever before.

WHO IS MICRO MAINFRAME?

MICRO MAINFRAME is the oldest and most respected after-market manufacturer of floppy disk controllers for the Model-III™.

MICRO MAINFRAME has more experience in floppy and hard disks than any other manufacturer, and we are producing turn-key firm us FDC-3 series of disk controllers for the third year.

MICRO MAINFRAME has sold thousands of controllers to many OEM's who have marketed MMF controllers as their own unit.

HOW DO I ORDER?

In order to provide the lowest possible price to the end user, **MICRO MAINFRAME** does not accept credit cards. You may either pre-pay your shipment, or we will ship C.O.D. All orders over \$250 require a 17% deposit upon placement. All non-credit funds will be held a minimum of 3 weeks before shipment. Shipping and handling charges are extra and are not included in the prices above. **MODEL-III™ COMPUTERS** are shipped by truck only. Please phone MMF to obtain shipping and handling fees to your location.

ACCEPT NOTHING LESS THAN THE BEST. INSIST UPON GENUINE MICRO MAINFRAME QUALITY PRODUCTS. Micro Mainframe has a complete line of products for the TRS-III™ computer system. Call or write for our descriptive flyer.

DEALER INQUIRIES SOLICITED (IN YOUR PRINTED LETTERHEAD ONLY).

Phone orders are accepted only between 9:30 AM and 5:00 PM Pacific Time.

MICRO MAINFRAME
11325 Sunrise Gold Circle
Building E
Rancho Cordova, CA 95670
(916) 635-3397

time and don't leave any areas—however small—unmarked. If you are having difficulty determining which level to assign to an area, the time to decide is now. Waiting

until you are entering digits into data strings is a mistake. Believe me—I've tried it both ways. A little extra care here will pay off in time and effort saved while building

the data statements. The marked copy will probably bear little resemblance to the original photograph by now, but don't get discouraged; the final printout will look a whole lot better.

Graphing

The next step involves printing the graph over the copy you just marked. A fresh ribbon should be used for this, especially if your photo has large areas of dark shading. Program Listing 2 (a or b) prints the graph. Run it with the marked photocopy in the printer (if your MX-80 does not have friction-feed, you can tape the copy to some fanfold and use the fanfold as a carrier). It is important to position the copy correctly in the printer before generating the graph, as you

Program Listing 2b

"There will be cases where... you will have to wing it."

will only have one shot at this. Try printing the graph first on a plain sheet of paper to determine the alignment you will need. When the graph has been printed on the marked copy, you will have something like the copy in Fig. 6.

After printing the graph, it's a good idea to number every fifth block across the top and down the left side of the graph, as in Fig. 6. This will help you keep track of your location on the graph as you convert the shading levels into data statements.

Almost There

The final step takes longest, but should go pretty smoothly if you prepared the copy well. Program Listing 3 (a or b) generates the final printout, and lacks only the data strings which define your photo. Key in the version for your printer and save it so it can be used as a shell for any future photos you might want to digitize.

Start the data statements with line 1001, using a line numbering increment of one. With the fingers of one hand on the number keys and the other hand keeping track of the current block on the graph, build each data string. Your markings will make it easy to see which shading level applies to each block, so you will not be slowed down by having to make the shading decisions as you go along. Each data string corresponds to a row of the graph, so start a new line in the program when you reach the end of a row.

There will certainly be cases where a block is half one shade and half another. In those cases, you will have to wing it. A glance at the original photograph will help here, but don't get sidetracked. Deviating from the shadings you decided on earlier

Fig. 6. Graphed copy ready for digitizing

can start a chain reaction of bad choices in the rest of that line.

Take Five

Building the data statements is a tedious process, and I recommend that you take plenty of breaks. It's also a good idea to generate a printout every so often to see how things are going, but don't expect too much. The image will undoubtedly need touching up in a few places. Besides, a portion of the picture won't look as good by itself as it will in the full printout.

If you reach the end of a row, and the data

line you just typed in does not have the same number of characters as the preceding lines, you are better off to completely redo the line. It is almost impossible to backtrack and find the place where you goofed.

If you plan to include a printed border around your final printout, as I did, use a six as the first and last character of each data statement. Also, the first and last data lines should consist of all sixes.

Touching Up

Try not to make any alterations until the

entire photo is digitized. Something that looks wrong when partially completed may fall into place after the next few lines are added. In touching up the data for Photo 1, I used the following method: When the image was complete, I generated a printout on a sheet of tracing paper. Placing this over the original photo showed the blocks that needed changing. Some blocks were too dark on the printout, and some were too light. Those that were too light were the easiest to spot. By listing the data lines in the affected area (as in Fig. 3), I was able to find and correct those characters which were wrong. The printer was set to a small line spacing before listing, so that the erroneous characters would be easier to identify.

Feel free to exercise a little artistic freedom in the touch-up process. If your original photo contains a blemish, or there is an area you would like to enhance, go right ahead. After all, it's your paintbrush.

When you are satisfied with the printout, it is ready to be printed on a good sheet of bond paper. A full printout of an 8 by 10 photograph will take about 30 minutes on the NEC printer, and about 50 minutes on the MX-80. Before wrapping everything up, make sure you save the data statements as you would save a program. They can be merged with the shell program any time you want a printout.

Instant Replay

Here is a summary of the steps used in digitizing the photograph:

- Select an appropriate subject
- Have photocopies made
- Outline and mark the shaded areas
- Superimpose the graph
- Build the data statements
- Touch up the data as necessary
- Generate a final printout
- Save the data lines on disk

Manipulation

Images are often converted into a digital form for scientific and other applications. This is usually to make it possible to manipulate the image in some manner. There are many ways in which an image might be manipulated. For example, if you want a negative of your digitized photograph, change line 70 of Listing 3 to read:

FOR SH=6 TO 1 STEP -1:

This sets up the shading levels in reverse order, so a data character which calls for shading 1 will show up on the printout as shading 6, and vice versa.

Another type of manipulation would be to eliminate some intermediate shading levels in the printout. This produces an image that is more highly contrasted, showing contours that may not be noticeable with subtle shading boundaries. One way to do this is to add the following line immediately after line 260 (line 300 of the MX-80 version):

IF SH/2 = INT(SH/2) THEN SH=SH-1

This eliminates any even-numbered shadings, printing them instead as the next

lower level. Although probably not very useful with the small number of shadings we are printing, this effect is invaluable in other applications. It was used, for example, to bring out details in the digital photographs taken by the Voyager spacecraft. By comparison, those pictures consisted of 64,000 blocks, and each block could have one of 256 shading levels.

You might want to try generating a mirror image of the photo. Changes in the shading data might also produce some interesting effects. Once the photograph information is in a digital form, there is almost no limit to the ways in which it can be processed.

Miniature TRS-80

As promised, I have included as a final ex-

ample of digitizing, a program that prints a miniature (less than 1-inch) copy of the TRS-80 screen. This is done with Program Listing 4 (a or b). It reads the screen pixels (the blocks which can be set or reset), and prints each lighted pixel as a dot on the paper. Since these pixels are arranged on the screen in a 48 by 128 matrix, the dots in the printout are arranged in the same way. At this tiny size it's not possible to duplicate any alphanumeric characters on the screen. You may have a few programs, however, that display some pretty fancy figures using the TRS-80's graphic blocks. These will be reconstructed by the program, surrounded by a rectangular border as in Fig. 4. If you are using an MX-80 printer, you will notice some distortion in the aspect ratio (ratio of height to width).

The program takes a little over three minutes to generate a screen print. A negative image can be produced by changing line 5160 to this:

$A(COL,ROW) = POINT(COL,ROW + REF) + 1$

Each sample printout shown in Fig. 4 was generated by merging the routine with a main program. You might recognize a few of these designs, since some are from popular programs. At some convenient place in the main program after the screen display was complete, I inserted a GOTO statement to cause a jump to the mini-screen routine.

Mini-screen could be used as a subroutine for multiple screen prints during a single program run, but the Clear and DEFINT statements will have to be removed from line 5050, and the A array will have to be dimensioned in the main program. By setting horizontal tabs within the program, you can print several images side-by-side. This effect can also be achieved on the NEC printer by changing the left margin.

For those who are curious about how the conversion is done, the key line of the program is line 5070. It is a defined function which converts a vertical pattern of eight screen pixels into a single decimal value. This value is sent to the printer in line 5220 (line 5230 in the MX-80 version), reproducing the vertical pattern with dots. The process is repeated until the end of a screen line is reached. A carriage return is then executed and the next column of eight pixels is done the same way.

Hidden Artists

I hope these articles have given you some food for thought. The projects were fun and challenging for me, and like most undertakings of this type, provided a valuable learning experience. As is always the case with programming, the methods outlined here represent only one approach. With a little imagination, you can unlock even more of the artist built into your smart printer, and maybe a little of the artist in you. ■

Mike Keller enjoys using the computer as a tool in the creative process.

DATA BASE BLUES

 1. DOES YOUR DATA BASE MANAGEMENT PROGRAM
 MEET ALL OF YOUR REQUIREMENTS?
 2. DO YOU NEED TO ADD ADDITIONAL FILES OR
 FIELDS TO THE DATA BASE?
 3. CAN YOU MODIFY YOUR DATA BASE ANY TIME?
 4. ARE YOU LIMITED TO THE NUMBER OF SCREEN
 OR PRINTER FORMATS ALLOWED?
 5. DO YOU HAVE TO USE MORE THAN ONE DATA
 BASE BECAUSE THE ONE YOU ARE USING WILL
 NOT HANDLE DATA BASES WITHIN DATA BASES?
 6. DOES YOUR DATA BASE HAVE ALL THE SPEED
 OF MACHINE LANGUAGE IN BASIC FORMAT?
 7. ARE YOUR FIELDS LIMITED IN LENGTH AND
 NUMBER? CAN YOU ADD MORE LATER?
 8. CAN YOU CLAIM THAT YOU WROTE IT WITH
 LITTLE OR NO PROGRAMMING KNOWLEDGE?
 IF YOU ANSWERED NO TO ANY OF THE ABOVE
 THEN YOU NEED:

 * DBM Sub *
 DBM Sub WILL GIVE YOU ALL OF THE ABOVE AND
 MORE. DBM Sub IS A DISK FULL OF BASIC SUB-
 ROUTINES, SCREEN FORMAT, PRINT, DISK
 IN/OUT ROUTINES, IN BASIC. DOCUMENTATION
 ON HOW TO PUT THEM TOGETHER TO DESIGN YOUR
 OWN CUSTOM DBM PROGRAM INCLUDED.
 * A DATA BASE PROGRAM DEVELOPED WITH THIS
 SYSTEM IS IN USE BY THE U.S. GOVERNMENT *
 * NO PROGRAMMING KNOWLEDGE REQUIRED *
 DBM Sub - Model I/III Disk.....\$49.95

STOCK ANALYST FOR TRS-80* MODEL I OR III

This program allows the investor in stocks to base buy and sell decisions on market momentum. The required input data is readily available from the newspaper. Extensive error trapping and editing facilities are provided. Optimum use is made of the screen graphics to display stock charts of the high, low and close. Permanent records are produced with an optional printer. The system requires a minimum of 16K of RAM and either Level II or Model III Basic. It operates with either tape or disk files. Stock Analyst is one program which you cannot afford to be without.

Send check for \$24.95 U.S. payable to:

**Instant
 typing**

Say "Goodbye" to the awkward hunt & peck method of typing! Instant Software introduces you to Typing Teacher—the patient tutor that will improve your typing skills. This complete seven-part package takes you all the way from initial familiarization with the keyboard, through words and phrases, to complete mastery of the keyboard. On screen diagrams show you the correct placement for fingers. Displays keep eyes up and away from keyboard to master proper techniques. Take home TYPING TEACHER today and type like a pro tomorrow. Requires: TRS-80*, Tape, Mod I and Mod III. 16K. #0099R \$17.95

Bustout

by Terry Hague

At first glance, Bustout seems like a simple game. You get three bars of green lights, worth 50, 25, and 10 points. The object is to knock out as many lights as possible.

But Bustout is difficult to master. You have only three balls, and the pad-

This Color Computer game gives you three chances to knock out as many lights as possible.

dle is difficult to control. My high score at the expert level is only 2,400.

Bustout is written for the Color Computer. You need joysticks and at least 4K of memory. You also must be able to POKE 65495,0 to play at the expert level. If your computer locks up when you POKE, you can still play, but you'll have to delete lines 10-40. ■

★ 10 MB disk for \$79.95! ★

Well, not quite, but with the **HEXMAN** disk management system it feels like your whole disk library is on one big disk!

Here's how it works. Under the Hexman system, a set of "Filestore" disks reside permanently in your disk drives. These disks contain your most active files. Any files that you wish to use, or create or change are kept on these Filestore diskettes. Files that you are not currently using are kept in a "Library" of disks beside your computer. Hexman maintains a catalog of all your files, and which disks they are on. When you need a file that is not currently in the Filestore, give Hexman its name. Hexman will instruct you to insert the appropriate Library disk and transfer the file into the Filestore. Library disks are identified by numbered color-coded labels which we provide.

If you had to mount Library disks every time you needed some files, Hexman would be no better than the old way of doing things. But here comes the clever part. Hexman knows which files are in the Filestore, so it only loads files if they are not currently available in the Filestore. It counts how frequently you use each file, and ensures that the files in the Filestore are the ones that are used most frequently. If the Filestore disks are getting too full, Hexman removes the least frequently used files. Because the most active files are kept in the Filestore, the chances are that any file you need will be ready and waiting. Only when you request a

rarely used file does Hexman need to move it in from the Library. Thus as Hexman becomes familiar with your pattern of file usage, transfers from the Library drop to a minimum.

Each morning, when you first use Hexman, it scans your Filestore, notes any changes and takes action. Any new files are automatically cataloged. New and updated files are backed up to the Library. Hexman makes this easy to do by sorting the files into Library disk sequence, then prompting you to insert the appropriate Library disks one after the other. This Filestore scan and backup process ensures that your disk Library files match the active files in your Filestore. Thus you can safely treat the few Filestore disks in your drives as if they contained your whole disk Library.

Besides the basic Storage Management Module described above, additional modules are available for those that need the extra power. The Security module creates two additional copies of any vital files, and allows off-site storage of one of those copies. The KeySearch module allows the cataloging and retrieval of files by keywords (also called headings or categories). This module allows fast retrieval of files even when you can't remember their names. Other extension modules for the Hexman system are planned.

Dennis Black, Owner

Ordering Via Recursive Routines

by John Stover

How many different permutations (orderings) are there for N different items? The answer is easy to find. It is simply $N!$ (N factorial, which is $N * (N-1) * (N-2) * (N-3) \dots 1$). Thus the number of possible orderings for six different items is six factorial, $6 * 5 * 4 * 3 * 2 * 1$, or 720.

But what are those orderings? If you have only a few items, it is easy to write the orderings. For example, the six possible orderings of the first three integers are 123, 213, 132, 231, 312, and 321. It isn't difficult to write the orderings for

Recursive routines can calculate all possible number combinations in a small amount of code.

larger numbers of items, but it is tedious.

I needed a routine to generate all the possible orderings in a gene-sequencing program of any number of items. I decided to use a recursive routine.

A recursive routine is one that calls itself. The simplest example would be: 10 GOSUB 10. Recursive routines are very powerful in certain programming applications. The Program Listing shows how these routines can make a very short program handle a complicated task.

Consider the possible ordering of the first six integers. You could start with the ordering 123456. Next, you would switch one and two to produce 213456. The next ordering would move the three over one space to the left, producing 231456. The next would switch one and two again, and so on. The general idea is to keep the six in the last position until all the possible combinations of five digits have been exhausted. Similarly, we want to keep the five in the fifth place until all possible permutations of four digits have been exhausted, and so on down to the first two digits. This is how the Program Listing works.

The number of digits to be ordered is entered in line 130. The digits are placed in numerical order for the first permutation (lines 160-180) and printed (line 200).

At line 210 the level, L , is set equal to the number of digits. Assuming the level is greater than two (the trivial case) the program transfers to the main routine at line 430. Since you want to maintain the highest-order digit in its place while switching all the others, the program immediately reduces the level by one ($L = L - 1$) and, if you have not yet reached the trivial case of $L = 2$, goes to line 440, which calls the same subroutine again. The same logic continues to apply. You want to maintain the next-

All Basics

highest digit in its place while changing all lower digits. So the level is again reduced by one and a check is made to see if the level has been reduced to two. This process of reducing the level by one and calling the same subroutine continues until you finally reach level two.

Once level two is reached the program goes to line 330, which simply switches the position of the first and second digits, prints the new order, and returns to line 430. Control then passes to line 450 where the level is increased by one and all possible permutations of the lower digits are generated (thus the statement FOR Z=1 TO L-1 in line 460). Once this has been completed, the digit corresponding to the current level is moved one column to the left (line 550) and the subroutine calls itself again (line 570) to generate all the permutations of the lesser digits.

This process continues until the digit corresponding to the current level reaches the leftmost column. Then line 590 returns to 450 where the level is increased by one and the whole process repeated. This continues until the program has worked its way back to the highest level (the total number of digits). At this point all the GOSUBs in line 440 have been completed by Returns from line 590 and the program terminates with a final Return to line 220.

The number of permutations expands rapidly as you add digits. There are 120 permutations of five digits and 3.6 million orderings of 10 digits.

Recursive routines let you write programs that generate all the permutations of any number of digits while requiring only 17 lines of code. ■

—ATTENTION ALL TRS-80® OWNERS—

No matter how your Model I, II or III is used, whether it be business or pleasure, this product can benefit you.

The **FATIGUE FIGHTER™** reduces the operator fatigue (irritated, watery eyes and headaches) caused by the harsh white video display thereby making computer use more efficient and/or enjoyable. The graph at the right will help explain how it works. Superimposed on the standard eye sensitivity curve is the band pass curve of the **FATIGUE FIGHTER™** as recorded by a spectrophotometer. A marker is also on the graph at the ideal psychological tolerance color. As you can see, the green color of the **FATIGUE FIGHTER™** takes advantage of both eye sensitivity and psychological tolerance to make the display less irritating.

The **FATIGUE FIGHTER™** is made of tough 1/8 inch thick acrylic sheet which adds absolutely no distortion or fuzziness to the display and is industry proven to be an excellent material for optical filtering (e.g. lenses for laser safety goggles). It installs easily on all three TRS-80* models with a pressure sensitive adhesive which will not let the filter fall off yet allows easy removal if necessary. Finally, the black and silver border design makes it a perfect match for the computer styling.

If you want a **FATIGUE FIGHTER™** of your own but prefer not to order by mail, check with your local computer stores to see if they have them in stock. Otherwise follow the ordering instructions below.

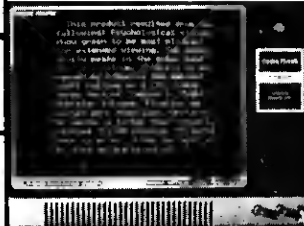

TRS-80 IS A TANDY CORP. TRADEMARK.

TO ORDER:

Send Name & Address Typed or Clearly Printed with Check or Money Order (U.S. FUNDS) for \$14.95 Each, Including Shipping. Canadian Orders add \$1.00 Each. —DEALER INQUIRIES INVITED—

Robot Reader

by Charles Gillen

How can you judge the difficulty of a text and know that it's appropriate for your audience? My program, Robot-Reader, scans a 100-word sample of any text and tells you how much education is required to understand it. Robot-Reader runs on a 16K Level II Model I or III.

Background

Even before computers were common, educators devised formulae to judge the difficulty level of a text based on the number of words per sentence, and the frequency of long words. One formula takes the average number of words per sentence plus the percentage of long words (three or more syllables) and multiplies this by a standard factor. This formula (see line 280 of the Program Listing) is fine for lower-school grades, but gives an inflated rating for more difficult texts. It accurately classifies the familiar "See Dick. See Dick run," as suited for first grade, but rates high school material as requiring many years of post-graduate study.

A different formula (line 290) used by

This short Basic program accepts text, analyzes it, and tells you its difficulty level.

the Department of Defense to measure and standardize written English also uses the average number of words per sentence, but stresses the average number of syllables per word. This formula is more reasonable at higher education levels, but yields a negative grade when confronted with "See Dick."

By sampling various texts, I found the two formulae seemed to agree in the area of the sixth grade. Robot-Reader analyzes a text with both formulae and uses the more appropriate formula to make a final recommendation.

The Program

Robot-Reader monitors each letter,

counts syllables, and ticks off each sentence as you type in a sample text. It does this between each keystroke, so if you type faster than 15 words per minute it can't keep up. If your keyboard has a CPU clock speed-up installed, just throw the switch and zip along as usual.

I put program initialization and instructions in lines 350-510 at the bottom of the listing, so I could locate the text input section (lines 20-120) at the top in the interest of faster execution. The input section counts vowels and assumes

```

that each vowel represents one syllable. If a double vowel is spotted it is counted only once.

The program remembers the last four letters input. It checks these to see if a word or sentence has just been completed by looking for a space or a period. It also looks for vowel endings that should not be counted as a syllable, such as the *e* in *mile* or the *ed* in *tired*.

Using the Program

Use no punctuation except for a period and a single space at the end of each sentence. Don't expect much accuracy if your sample is very short. Each new text may present some problems: Hyphenated words count as one long word unless you skip the hyphen. Should an independent clause be treated as a new sentence? Should you spell out numbers? If your sample is long enough, the result varies little no matter how you resolve these questions.

Though the program gives an analysis whenever you type a period and hit the enter key, it's best to keep typing until Robot counts 100 words. The program terminates your input the next time you finish a sentence. The analysis is instantaneous giving a final grade and also a word count. I shaped the analysis to avoid telling the obvious—if all your words have only one syllable, or you have typed no long words, the program does not give percentages for them. ■

Ed. Note: To run this program on a Model II, 12, or 16, change PRINT@ 974 in lines 320 and 470 to PRINT@ (19,17).

Charles Gillen lives at 1458 Greenmont Court, Reston, VA 22090.

80 micro BOOK SHELF

CAPTAIN 80 BOOK OF BASIC ADVENTURES—by Robert Liddell. This book contains 18 of the most popular Adventure programs available today; all in one easy to read book with listings ready to be keyed in to your computer. This unique book also contains an ADVENTURE GENERATOR program, not available from any other source. This generator program will actually write another BASIC ADVENTURE PROGRAM! Although specifically written for the TRS-80 Model I & III, these programs are adaptable to other computers using Microsoft BASIC. BK 1240 \$19.95

40 COMPUTER GAMES FROM KILOBAUD MICROCOMPUTING—Forty games in all in nine different categories. Games for large and small systems, and even a section on calculator games. Many versions of BASIC used and a wide variety of systems represented. A must for the serious computer gamesman. BK7381 \$7.95

INTRODUCTORY/GAMES

DON'T (or How to Care for Your Computer)—by Rodney Zaks. In plain language, with numerous illustrations, this book tells all the do's and don't's of the care, preservation and correct operation of the small computer system. Specific chapters cover each piece of hardware and software, as well as safety and security precautions and help for problem situations. Have your computer work right the first time and keep it working. No technical background required. For all computer users. BK1237 \$11.95.

YOUR FIRST COMPUTER—by Rodney Zaks. Whether you are using a computer, thinking about using one or considering purchasing one, this book is indispensable. It explains what a computer system is, what it can do, how it works and how to select various components and peripheral units. It is written in everyday language and contains invaluable information for the novice and the experienced programmer. (The first edition of this book was published under the title "An Introduction to Personal and Business Computing.") BK1191 \$8.95

MICROPROCESSOR INTERFACING TECHNIQUES—by Austin Lesca & Rodney Zaks—will teach you how to interconnect a complete system and interface it to all the usual peripherals. It covers hardware and software skills and techniques, including the use and design of model buses such as the IEEE 488 or S-100. BK1037 \$17.95

COMPUTERS FOR EVERYONE 2nd Edition—by Jerry Willis and Merl Miller. This new, updated edition shows you how computers can be used in your home, office or school. It explains what computers can do and features a consumer's guide of the more popular computers to help you decide which one to buy and who to buy it from. There's even a chapter devoted to software that describes over 100 programs currently available. Also included are chapters on peripherals, telecommunications and computers in education. Abounds with colorful photographs. BK1260 \$5.95

INTRODUCTION TO WORD PROCESSING by Hal Glatzer. This book explains in plain language what a word processor can do, how to use one, how it improves productivity—especially in businesses that handle lots of words—and how to buy one wisely. No technical knowledge required, for all first-time users and those considering purchasing a word processor. BK1238 \$12.95

A USER GUIDE TO THE UNIX SYSTEM by Jean Yates and Rebecca Thomas. Here at last is a clearly written book that allows you to use the Unix operating system easily, and at a fraction of the time it previously took. If you're using, evaluating or simply curious about this system, this is your book. BK1242 \$15.99

WORDSTAR MADE EASY by Walter A. Eitlin. Now WordStar is as simple to learn as it is easy to use. This book teaches WordStar in 14 easy lessons, saving hours of hard work. It comes with a convenient pull-out Command Card. BK1239 \$7.95

WAYNE GREEN BOOKS

THE SELECTRIC INTERFACE—by George Young. You need the quality print that a daisy wheel printer provides but the thought of buying one makes your wallet wilt. **SELECTRIC™ INTERFACE**, a step-by-step guide to interfacing an IBM Selectric I/O Writer to your microcomputer, will give you that quality at a fraction of the price. George Young, co-author of *Kilobaud Microcomputing* magazine's popular "Kilobaud Klassroom" series, offers a low-cost alternative to buying a daisy wheel printer. **SELECTRIC INTERFACE** includes: step-by-step instructions, tips on purchasing a used Selectric, information on various Selectric models, including the 2740, 2980, and Dura 1041, driver software for 280, 8080, and 6502 chips, tips on interfacing techniques. With **SELECTRIC INTERFACE** and some background in electronics, you can have a high-quality, low-cost, letter-quality printer. Petals not included. BK7388 (125 pages) \$12.97

COMPUTER CARNIVAL—by Richard Ramella. Your child can become a crackjack computerist with the sixty TRS-80 Level II programs in **COMPUTER CARNIVAL**. This large-type, spiral bound book for beginners is a veritable funhouse of games, graphics, quizzes and puzzles. Written by 80 Micro columnist Richard Ramella, the programs are challenging enough to ensure continued learning, yet short enough to provide your child with the immediate delight and reward of mastering basic computing skills. And for even greater enjoyment, get the **CARNIVAL COMPANION**, a 30-minute cassette containing all the programs in the book. Eliminates tiresome typing and lets your child spend more time enjoying the programs. BK7389 \$16.97. C07389 Book and Cassette \$24.97

TEXTEDIT—A Complete Word Processing System in Kit Form—by Irwin Rappaport. **TEXTEDIT** is an inexpensive word processor that you can adapt to suit your differing needs—from form letters to lengthy texts. Written in TRS-80 Disk BASIC, the system consists of several modules, permitting the loading and use of only those portions needed. A disk is also available which provides the direct loading of the modules; however, the book is required for documentation. For Model I and III with TRSDOS CONVERT, one disk drive (2 disk drives or copy utility needed to transfer to system disk). Runs under TRSDOS 2.2/2.3. May not function under other systems. BK7387 \$9.97 Disk \$7.97

KILOBAUD KLASROOM—by George Young and Peter Stark. Learning electronics theory without practice isn't easy. And it's no fun to build an electronics project that you can't use. *Kilobaud Klassroom*, the popular series first published in *Kilobaud Microcomputing*, combines theory with practice. This is a practical course in digital electronics. It starts out with very simple electronics projects, and by the end of the course you'll construct your own working microcomputer!

Authors Young and Stark are experienced teachers, and their approach is simple and direct. Whether you're learning at home or in the classroom, this book provides you with a solid background in electronics—and you'll own a computer that you built yourself! BK7386 \$14.95

THE NEW WEATHER SATELLITE HANDBOOK—by Dr. Ralph E. Taggart W88DQT. Here is the completely updated and revised edition of the best-selling *Weather Satellite Handbook*—containing all the information on the most sophisticated and effective spacecraft now in orbit. Dr. Taggart has written this book to serve both the experienced amateur satellite enthusiast and the newcomer. This book is an introduction to satellite watching, that tells you how to construct a complete and highly effective ground station. Not just ideas, but solid hardware designs and all the instructions necessary to operate the equipment are included. An entire chapter is devoted to microcomputers and the Weather Satellite Station, and for the thousands of experimenters who are operating stations. *The New Weather Satellite Handbook* details all the procedures necessary to follow the current spacecraft. Weather Satellite contains Operation Satellite Systems, Antenna Systems, Weather Satellite Receivers, A Cathode Ray Tube (CRT) Monitor for Satellite Picture Display, A Direct-Printing Facsimile System for Weather Satellite Display, How to Find the Satellite, Test Equipment, Microcomputers and the Weather Satellite Station, Station Operations. BK7383 \$8.95

ANNOTATED BASIC—A NEW TECHNIQUE FOR NEOPHYTES—BASIC programming was supposed to be simple—a beginner's programming language which was so near to English that it could be easily understood. But, in recent years, BASIC has become much more powerful and therefore much more difficult to read and understand. BASIC simply isn't basic anymore.

Annotated BASIC explains the complexities of modern BASIC. It includes complete TRS-80™ Level II BASIC programs that you can use. Each program is annotated to explain in step-by-step fashion the workings of the program. Programs are flowcharted to assist you in following the operational sequence. And—each chapter includes a description of the new concepts which have been introduced.

Annotated BASIC deals with the hows and whys of TRS-80 BASIC programming. How is a program put together? Why is it written that way? By observing the programs and following the annotation, you can develop new techniques to use in your own programs—or modify commercial programs for your specific use.

Annotated BASIC Volume 1 BK7384 \$10.95

Annotated BASIC Volume 2 BK7385 \$10.95

Order Both Volumes and Save! BK738402 \$18.95

MOD III ROM COMMENTED

H.C. Pennington
**TRS-80 DISK
& OTHER MYSTERIES**

DOS RANDOM ACCESS & BASIC FILE HANDLING—By H.J. Muller. This book was written for the nonprogrammer. It is ideal for the businessman or professional who needs to solve and write special programs for in-house business problems, or the hobbyist who wants to go beyond the cassette recorder and into disk storage and file manipulation. It is written as a self-instruction tutorial and will provide anyone with some Level II experience with the ability to write special programs for inventories, mailing list, work scheduling, record keeping, research project data manipulation, etc. 150 pages. BK1236 \$29.50

TRS-80 DISK AND OTHER MYSTERIES—by Harvard C. Pennington. This is the definitive work on the TRS-80 Model I disk system. It is full of detailed "How to" information with examples, samples and in-depth explanations suitable for beginners and professionals alike. The recovery of one lost file is worth the price alone. BK1181 \$22.50.*

MICROSOFT BASIC DECODED AND OTHER MYSTERIES—by James Earvour. From the company that brought you *TRS-80 DISK AND OTHER MYSTERIES*. Contains more than 6500 lines of comments for the disassembled Level II ROMs, six additional chapters describing every BASIC subroutine, with assembly language routines showing how to use them. Flow charts for all major routines showing how to use them. Flow charts for all major routines give the reader a real insight into how the interpreter works. BK1186 \$29.50.*

HOW TO MAKE MONEY WITH COMPUTERS—In 10 information-packed chapters, Jerry Felsen describes more than 30 computer-related, money-making, high profit, low capital investment opportunities. BK1003 \$15.00.*

SMALL COMPUTERS FOR THE SMALL BUSINESSMAN—By Nicholas Rosa and Sharon Rosa. Here is an excellent guide for businessmen who are interested in finding out what a computer can do for their business, but are not interested in becoming "computer nuts." The authors are consultants who assess the computer needs of businessmen and who touch base with everything necessary to consider before purchasing a computer. The authors tell readers how and where to shop successfully for a computer; what to expect their computer to do for them; how large a computer to consider; how to select software; whether or not to use a consultant; how to introduce the computer to the staff, and much more. Specific topics addressed include accounting records, warehousing, light factory operation and parts inventories. BK1223 \$12.95*

* Use the order card in this magazine or itemize your order on a separate piece of paper and mail to 80 Micro Book Department, Peterborough NH 03458. MACHINE LANGUAGE DISK I/O AND OTHER MYSTERIES—by Mike Wagner. The purpose of this book is to inform anyone familiar with Z-80 assembly language programming how to control the TRS-80 Model I and III disk drive interrupt systems. Driver routines for every function described, with abundant examples, are included in this book. It also covers utilization of TRSDOS assembly language file I/O calls and techniques. BK1258 \$29.95

MOD III ROM COMMENTED—Soft-Sector marketing, 1981. This book is not an instruction course on machine language, but rather an information source that you can use time and time again for writing your own program or patching old Mod I machine language programs. It contains an explanation of ROMs in the latest machine from Tandy, with most every location of the 14K ROMs listed, with comments. BK1235 \$22.50.

THE CUSTOM TRS-80 AND OTHER MYSTERIES—by Dennis Klitz. More than 300 pages of TRS-80 customizing information. With this book you'll be able to explore your computer like never before. Want to turn an 8 track into a mass storage unit? Individual reverse characters? Replace the BASIC ROMs? Make Music? High speed, reverse video, Level I and Level II? Fix it if it breaks down? All this and much, much more. Even if you have never used a soldering iron or read a circuit diagram, this book will teach you how! This is the definitive guide to customizing your 80! BK1218 \$29.95.*

BASIC FASTER AND BETTER AND OTHER MYSTERIES—by Lewis Rosenfelder. You don't have to learn assembly language to make your programs run fast. With the dozens of programming tricks and techniques in this book you can sort at high speed, swap screens in the twinkling of an eye, write INKEY routines that people think are in assembly language and add your own commands to BASIC. Find out how to write elegant code that makes your BASIC really hum, and explore the power of USR calls. BK1221 \$29.95.*

THE CP/M HANDBOOK (with MP/M)—by Rodney Zaks. A complete guide and reference handbook for CP/M—the industry standard in operating systems. Step-by-step instruction for everything from turning on the system and inserting the diskette to correct user discipline and remedial action for problem situations. This also includes a complete discussion of all versions of CP/M up to and including 2.2, MP/M and CDOS. BK1187 \$14.95.*

MASTERING CP/M—by Alan R. Miller. For advanced CP/M users or systems programmers who want maximum use of the CP/M operating system, this book takes up where the *CP/M Handbook* leaves off. It will give you an in-depth understanding of the CP/M modules such as CCP (Console Command Processor), BIOS (Basic Input/Output System), and BDOS (Basic Disk Operating System). It explains the incorporation of additional peripherals to the system, console I/O, the use of the file control block and much more. It also includes a library of useful macros and a comprehensive set of appendices. BK1263 \$15.95

MONEYMAKING/BUSINESS

SO YOU ARE THINKING ABOUT A SMALL BUSINESS COMPUTER—By Richard G. Canning and Nancy C. Leeper. For a well-organized manual on the process of selecting the right computer system for your small business, this text can't be excelled. Designed to introduce the novice in data and word processing to the real benefits of computerization, the book is filled with money- and time-saving tips, photos of equipment, lists of suppliers, prices, explanations of computer terminology, and helpful references to additional sources of information. Everyone contemplating a first computer installation should have this book. BK1222 \$14.00*

USING MICROCOMPUTERS IN BUSINESS—By Stan Veit. Written by the owner/manager of one of the country's largest computer stores selling systems to small businesses, this book is an essential background briefing for any purchaser of microcomputer systems or software. In a fast-moving style, without the usual buzz words and technical jargon, Veit answers the most often asked questions. **CONTENTS:** How a computer can help your business; Data base management to advance your business; Effective use of word processing; How to use a computer without disrupting your business; Buying your system; Computer languages; What are the limitations of the microcomputer; Software: where to find it, how to judge it; What to do when the computer goes down. BK1225 \$9.95*

BUSINESS SYSTEM BUYER'S GUIDE—By Adam Osborne with Steven Cook. When you enter the market place of small business computers, you face a bewildering array of products, prices, features and fables. This guide cuts through the jargon and unravels the task of buying the right computer system. This book provides solid information on how to determine your needs, how to choose software and hardware for all business applications, what to expect from vendors, what to avoid, and what questions you must ask. It also provides a wealth of detailed information on products, manufacturers, retailers and the whole microcomputer market. BK1229 \$9.95

80 micro BOOK SHELF

PROGRAMMING • 6809

Z80

INSIDE LEVEL II—For machine language programmers. This is a comprehensive reference guide to the Level II ROMs, allowing easy utilization of the sophisticated routines they contain. It concisely explains set-ups, calling sequences, variable passage and I/O routines. Part II presents an entirely new composite program structure which unloads under the SYSTEM command and executes in both BASIC and machine code with the speed and efficiency of a compiler. Special consideration is given to disk systems. BK1183 \$15.95.*

Z-80 ASSEMBLY LANGUAGE PROGRAMMING—by Lance A. Leventhal. This book thoroughly covers the Z-80 instruction set, abounding in simple programming examples illustrating software development concepts and actual assembly language usage. Features include Z-80 I/O devices and interfacing methods, assembler conventions, and comparisons with 8080A/8085 instruction sets and interrupt structure. BK1177 \$16.99.*

TRS-80 ASSEMBLY LANGUAGE—by Hubert S. Howe, Jr. This book incorporates into a single volume all the pertinent facts and information you need to know to program and enjoy the TRS-80. Included are clear presentations of all introductory concepts, completely tested practical programs and subroutines, details of ROM and RAM and disk operating systems, plus comprehensive tables, charts and appendices. Suitable for the first time user or more experienced users. BK1217 \$9.95.*

PROGRAMMING THE Z-80—by Rodnay Zaks. Here is assembly language programming for the Z-80 presented as a progressive, step-by-step course. This book is both an educational text and a self-contained reference book, useful to both the beginning and the experienced programmer who wish to learn about the Z-80. Exercises to test the reader are included. BK1122 \$15.95.*

Nanos System REFERENCE CARDS

FOR MODELS I, II, III, COLOR AND
POCKET COMPUTERS!

At last! No more flipping through the pages of the BASIC manual! No more working through the maze of machine language instructions! These cards completely summarize the BASIC and Assembler manuals! **FEATURES INCLUDE:** memory map, eyeball graphics, math instructions, BASIC commands, store instructions, BASIC functions, load instructions, BASIC statements, move instructions, special keys, exchange instructions, PRINT USING examples, shift instructions, BASIC special characters, compare instructions, BASIC and assembler messages and codes, branch instructions, BASIC facts, data alteration instructions, reserved words, I/O instructions, ROM routines, complete character chart with graphics and space-compression codes, hex-dec chart, control code cross-reference, assembler instructions, commands and operators, screen line layout, editor commands and subcommands, condition code easy access.

Plus—"magic graphics number—a mystery until you learn how to use it!
Designed as a fold-up, accordion-style card, fits in your pocket. Panels organized for optimum speed for reference.

Model I: BASIC and Assembler FC1002	\$4.95
Model II: BASIC and Assembler FC1005	\$3.95
Model III: Commands and Utilities FC1010	\$3.95
Model III: BASIC and Assembler FC1005	\$5.95
Color: BASIC and Extended FC1006	\$4.95
Z-80: Microprocessor FC1011	\$4.95
ZX80, ZX81 and Timex Sinclair 1000: FC1012	\$5.95
Pocket Computer: BASIC FC1009	\$2.95

PROGRAMMING THE 6809—by Rodnay Zaks and William Labiak. This book explains how to program the 6809 in assembly language, covering all aspects progressively and systematically: basic programming techniques and devices, application examples, data structures, and program development. No prior programming knowledge is required. BK1264 \$14.95

TRS-80 COLOR COMPUTER GRAPHICS—by Don Inman with DYNAMAX. This exciting book will enable you to explore all the graphics capabilities of Extended Color BASIC. You'll learn how to create interesting graphics to enhance your own computer programs. Also included are application programs and subroutines that will be invaluable when you begin writing your own graphics programs. Each chapter ends with a summary and practice exercises. BK1266 \$14.95

ASSEMBLY LANGUAGE GRAPHICS FOR THE TRS-80 COLOR COMPUTER—by Don Inman and Kurt Inman with DYNAMAX. This dynamic new book uses sound and graphics to show you how 6809 assembly language can be used to perform tasks that would be difficult or impossible with BASIC. All of the techniques are explained in a hands-on approach. Learn how to tailor your own programming style, from editing, assembling, executing and even debugging, to making your own programs run quickly and efficiently. It is also packed with video screen diagrams which explain each step of the process of creating your own graphics. BK1277 \$??.*

6809 MICROCOMPUTER PROGRAMMING AND INTERFACING—by Andrew C. Staugaard, Jr. Getting involved with Tandy's new Color Computer? If so, this new book from the Blacksburg Group will allow you to exploit the awesome power of the machine's 6809 microprocessor. Detailed information on processor architecture, addressing modes, register operation, data movement, arithmetic logic operations, I/O and interfacing is provided, as well as a review section at the end of each chapter. Four appendices are included covering the 6809 instruction set, specification sheets of the 6809 family of processors, other 6800 series equipment and the 6809/6821 Peripheral Interface Adapter. This book is a must for the serious Color Computer owner. BK1215 \$13.95.*

BASIC & PASCAL

The BASIC Handbook

PASCAL

LEARNING TRS-80 BASIC—by David A. Lien, Dr. Lien, who is the author of THE BASIC HANDBOOK and the original Radio Shack LEVEL I USER'S MANUAL, has compiled a tutorial which includes portions of the original USER'S MANUAL, and most of LEARNING LEVEL II along with extensive additions. It will completely cover the TRS-80 Models I, II, III, and 16 (sorry, not the color or pocket computers). It is, of course, written in the easy learning style which readers of Dr. Lien's books have come to enjoy. BK1175 \$19.95.

THE BASIC HANDBOOK—SECOND EDITION—by David Lien. This book is unique. It is a virtual ENCYCLOPEDIA of BASIC. While not favoring one computer over another, it explains over 250 BASIC words, how to use them and alternate strategies. If a computer does not possess the capabilities of a needed or specified word, there are often ways to accomplish the same function by using another word or combination of words. That's where the HANDBOOK comes in. It helps you get the most from your computer, be it a "bottom-of-the-line" micro or an oversized monster. BK1174 \$19.95.*

PROGRAMMING IN PASCAL—by Peter Grogono. The computer programming language PASCAL was the first language to embody in a coherent way the concepts of structured programming, which has been defined by Edsger Dijkstra and C.A.R. Hoare. As such, it is a landmark in the development of programming languages. PASCAL was developed by Niklaus Wirth in Zurich; it is derived from the language ALGOL 60 but is more powerful and easier to use. PASCAL is now widely accepted as a useful language that can be efficiently implemented, and as an excellent teaching tool. It does not assume knowledge of any other programming language and therefore suitable for an introductory course. BK1140 \$12.95.*

INTRODUCTION TO PASCAL—By Rodnay Zaks. A step-by-step introduction for anyone wanting to learn the language quickly and completely. Each concept is explained simply and in a logical order. All features of the language are presented in a clear, easy-to-understand format with exercises to test the reader at the end of each chapter. It describes both standard PASCAL and UCSD PASCAL, the most widely used dialect for small computers. No computer or programming experience is necessary. BK1189 \$15.95

Enter Another Dimension

The world of 3D.

You'll find it in **80 MICRO's** Anniversary Issue: true stereoscopic three-dimensional Color Computer* graphics, with your own complimentary pair of 3D glasses bound right into the magazine. This is the biggest **80 MICRO** we've ever published, 600 pages loaded with the kind of programs and information you need:

- stereoscopic 3D Color Computer graphics programs
- how to shop for a printer
- 3-year **80 MICRO** index, annotated and cross referenced
- CoBOL tutorial for beginners
- a list of over 200 user's groups
- Model II utilities and applications programs
- Bill Barden's introduction to Assembly Language
- NODOS 80—disk utilities for cassette users

And it's yours for only \$5.95. Order your Anniversary Issue today. Use the attached order form, the coupon below, or call toll free

1-800-258-5473

HARDWARE

Eye of the Tiger

Tandy gets it back with the Model 100.

Tandy Corporation made a significant move into the portable microcomputer market by introducing its TRS-80 Model 100 this spring.

According to one industry source, Tandy's invested \$180 million in the venture, more than it's ever sunk into a new project. And from the initial reaction of the TRS-80 community, the money was well-invested.

"This will do for the portable market what the Model 1 did for microcomputers," the source said. "Tandy sold 300,000 Model 1's in three years. It will sell that many Model 100s in one year."

The 100 is available in 8K (\$799) or 24K (\$999). Upgrades, up to 32K, cost \$120 for each 8K of CMOS memory.

The portable comes with its own version of Microsoft Basic and four built-in applications programs for word processing, telecommunications, and storing schedules and addresses.

Programmers interviewed by *80 Micro* said the 100's Basic is more powerful than the versions in Tandy's Models 1 or 111. It features:

- A wide-range of input-output statements, allowing a user to access devices like the RS-232C port or eight-line-by-40-character LCD screen;
- Commands to generate music from the 100's five-octave sound generator;
- A Call function allowing Basic to di-

Tandy's Model 100 Micro Executive Work Station may be small outside, but inside it packs quite a wallop.

rectly access machine-language subroutines; and

- Commands allowing program execution to be interrupted when it encounters data from the RS-232 or modem, or senses a function key has been pressed, a time reached, or a certain error has arisen.

The 100 contains a simple word-processing program. A user can insert and delete characters, "cut" and "paste" blocks of text, and search for character strings.

The schedule program acts as a mini-data-base manager. A user can store and search for records. The address program is similar. However, it's linked to the telecommunications program, so if phone numbers are stored with the address, the 100 can dial them automatically.

Telcom also allows the 100 to talk with other computers. It can upload and download files and tap into bulletin boards and data bases. Using Telcom, the 100 can be programmed to automatically log a user onto an information system like The Source or CompuServe.

It is powered by four "AA" batteries and has an optional ac adapter. A built-in nickel-cadmium battery recharges itself when the computer's turned on and keeps the memory alive when the computer's off. In an 8K machine, the Ni-Cad will retain what's in memory for 30 days after last power-on. In a 32K unit, memory stays refreshed eight days.

Other features include full-size keyboard, eight programmable function keys, four command keys, four cursor movement keys, a 10-key numeric keypad, built-in modem, RS-232C interface, and parallel printer port.

Next month, *80 Micro* will run an extensive review of the 100. ■

Initial reaction to the 100 indicate it may soon be the star of the Tandy line.

HARDWARE

Microflopies

Pint-sized disk makers look to market for sub-5.25-inch standard.

BY JOHN P. MELLO JR.

80 MICRO NEWS EDITOR

Half a meg on a 3-inch disk? Or will it be on a 3 and a half-inch disk? Or 3 and a quarter? How about 3.9? Those are the questions confronting benchmark makers at the American National Standards Institute. But it appears they're questions that won't be answered this year.

"I think I would be naive to hope that ANSI would finish all the technical work they need to do to make it official this year," observed Charles Payne.

Payne, business planning manager for Verbatim Corporation, chairs the Microfloppy Industry Committee, an informal panel representing 21 firms backing the 3.5-inch, hard-jacket standard for microflopies.

One industry newspaper supported Payne's analysis: "Most drive manufacturers we spoke with agreed there would be no movement toward standardization this year... Of course, as the drives and disks come to market, the customers might create a standard by economic persuasion."

If consumers "vote" for a standard with their dollars, some observers believe the firms that get their products into volume production fast and maintain reliability will be very influential on the "economic electorate." One of those firms may be Tabor Corporation, the leading proponent of the 3.25-inch, soft-jacket standard.

Tandon and Shugart (both 3.5-inch supporters) are six months behind us, said Tabor Corporation President Michael Hanley in an exclusive interview with editors at Wayne Green Inc.

However, Tabor is plotting a course into the wind. Of the four lines of microflopies products being produced, all

but Tabor's use hard-shelled disks. And with industry heavies like Shugart, Tandon, and Verbatim lining up behind the 3.5-inch standard, the momentum seems to be behind that benchmark.

Even if the marketplace establishes the standard, it still may be a year away—if not longer. Most estimates show relatively small volumes of microflopies products being shipped this year. Dataquest predicts 155,000 drives will be sold in 1983, while Matsushita estimates 1 million microdrives will be sold in 1984, 2 million in 1985, and 4 million in 1986.

A big reason for the slow development of the market is it's tied to the portable

computer market, which observers say won't take off until next year.

If microflopies are primarily used for portables, the 3.5-inch standard—with its hard plastic shell—could gain an upper hand in the market. George Sollman, vice president and general manager of Shugart Associates' sales and marketing division, told one reporter, "People are going to be using these drives in environments where computers are going to be bounced around and you have to take steps to ensure proper protection of the media."

"We were concerned," explained Tom Jarrett, marketing manager for Shugart's microflopies venture, "about providing as much protection as possible for the media. That led us down the path to the hard jacket."

"There's obviously some market places where you're going to have a high degree of contamination or susceptibility to contamination," Tabor's Hanley admitted. "In that case, it might be the right thing to do to put the disk in a cartridge rather than in a standard floppy."

Three-inch, hard-shelled microflopies compared to 5.25-inch minifloppy.

Tabor claims its 3.25-inch disk drive is very reliable.

Microfloppy Committee Chairman Payne said his panel initially favored the soft-jacketed disk. "I have that prejudice," he admitted, "because we [Verbatim] make that kind of product and it would be easier and cheaper for us." But, he said, after surveying Original Equipment Manufacturers and users, the hue and cry was for the hard jacket.

Tabor also talked to manufacturers, according to Hanley. "The manufacturers' major concern," he said, "is they have to buy all new manufacturing equipment to produce the hard shell. It's very expensive. Capital investment is in the range of \$2 million."

He claimed, "From the media manufacturer's point of view—with the exception of Verbatim—everyone seems to want to go along with the three and a quarter. But if the Sony [3.5] cartridge gains acceptance, they're willing to go along to get business. They really don't want to do it."

Hanley argued hard-shelled disks

have disadvantages in the price and reliability departments.

He explained soft-jacket floppies have five parts, while one hard-jacket version has 12 parts, another 16. "They've added parts that can go wrong," he said. "That affects reliability."

He sees the hard-jacket's Achilles heel as the door on the outside of the disk. When inserted in the drive, the door opens. While outside the drive, it

stays closed to block out contaminants. If that mechanism fails, Hanley contended, there's no way to recover the data.

Shugart's Jarret acknowledged, "The fewer moving parts you have in a drive, the more reliable it tends to become." But he added, "We have some pretty stringent requirements for reliability for [the door] mechanism. The design testing we've done shows it's very reliable." Those tests, he said, show the mechanism still working after 30,000 insertions.

Payne of Verbatim added that since the door mechanism is on the shell's outside, it can be easily pried off and the data recovered from the disk.

Reliability is also a problem with the 3-inch standard, according to opponents of that proposed benchmark. Ironically, why it's a problem is because of an informal goal the industry's agreed upon: a megabyte of storage on a double-sided microfloppy.

"It's a well-engineered product," Payne said of the 3-inch disk. "The

Computer Products Inc.

4897 E. SPEEDWAY BLVD., TUCSON, AZ 85712, (602) 323-9391

The Lineup: Tabor's 3.25-inch microfloppy compared to 5.25-inch and 8-inch floppies.

only trouble is when you try to get a higher density."

To pack a meg on a 3.5-inch disk, manufacturers use 135 tracks per inch. The 3.25-inch disk has a tpi of 140. The 3-inch makers—now with single-sided storage of 250K at 100 tpi—will have to hike their tpi to 200 to make the one meg goal. "The technical people on the committee and at ANSI just don't believe they're going to do that," Payne said. "If they do do it, we don't think it will be reliable. It's just pushing the technology real hard."

When asked about Payne's remarks, a spokesman for one distributor of Hitachi's 3-inch drive nonchalantly brushed them aside. "I firmly believe and Hitachi believes," said an Amdek Corporation spokesman, "that for reliability, they're practically the same. They don't make inferior products in Japan."

Shugart's Jarret doesn't doubt a one meg 3-inch disk can be made reliable. But he asks, "Is it a cost-effective technology?"

"We can go to 200 tpi," he said. "People are doing it on five and a quarter products. But they're using servo and data-sampling concepts for fine positioning. All that is very expensive to implement."

"If you go addressing more costly technology to achieve certain performance goals," he noted, "you sometimes price yourself out of the market."

Pricing is another point in the 3.25-inch disk's favor, according to Hanley of Tabor. The hard shell, he said, costs 10 percent to 40 percent more to make than the soft shell. He added: "Our sensitivity is to the user. We're trying to keep it as cheap as possible."

"I think they're right in claiming it can be made less expensively in equivalent volumes," Verbatim's Payne acknowledged, "but I don't think

there's a prayer there's going to be equivalent volumes. The demand for the hard shell is going to be greater."

Whether it be 3, 3.5, 3.25, or 3.9, microfloppy technology will initially cost more than minifloppies, a prospect inducing some chipsters to turn their backs to the new medium. As one computerist on CompuServe remarked about Amdek's 3-inch disk drives: "Is it worth it? No, unless space is a premium factor. Plus the cost of the non-flexible diskettes make it an unattractive offer at this time."

The fourth entry into the microfloppy sweepstakes is big, slow, incompatible with popular interfaces, and has low storage capacity. Why is it in the running? Verbatim's Payne has an answer to that question: "The really nice thing about that drive is it has IBM's name on it."

Payne said IBM planned to release their 3.9-inch drive with its PC. If that schedule had been followed, he continued, IBM could have established the microfloppy standard. But it wasn't. Now they've got this thing, he noted, with low capacity—a quarter meg on a side—is non-compatible, and is large, slow, and generally, out of date.

"I'm really sorry they [IBM] got into it," he added, "because they have enough weight to drag a part of the industry with them and it's going to fragment the market."

The Big Blue's said it released its drive because it wants to be more than a supplier of computer systems. It wants to provide peripherals to the OEM market, too. But some observers ques-

tion that rationale.

They maintain IBM, seeing the Japanese 3.5-inch standard gaining ground, decided to throw a monkey wrench into the scheme of things. Tabor's vice president for marketing, George Rea, told one newspaper: "Everyone has gotten a little upset about the fact that it is Sony leading the way. There has been resistance from U.S. companies—including IBM—to having a Japanese company forcing a standard on the U.S. market."

Asked if IBM could hurt its reputation by marketing its 3.9, Verbatim's Payne responded: "I think they will do less well with it than they would with a three and a half inch product, but what could be a major pain for a disk-drive company like Shugart or Tandon probably would be a minor problem for IBM."

As far as IBM is concerned, it was undaunted by benchmark makers when it came to introducing its new product. Hayes Price, OEM marketing and planning manager, told one reporter: "If there had been a standard set, we still would have announced this product. We have had it under development for some time."

Will the four standards survive? Not likely, said Scott Holt, Seagate sales and marketing vice president. He told one newspaper, "I don't believe the market can support the four there today." However, more than one design may survive the coming shakeout. Observed Tandon's product manager Robert Abraham to one reporter, "There probably will be a couple of designs accepted in the marketplace." ■

BASF QUALIMETRIC™ A TOTALLY NEW DIMENSION OF QUALITY.

From BASF comes a totally new level of excellence in magnetic media—the Qualimetric standard, a standard so advanced that BASF FlexyDisks® are confidently backed by an extraordinary new lifetime warranty.* The Qualimetric standard is maintained without compromise through every step of BASF design, production, inspection, and testing...reflecting an unwavering BASF commitment to media fidelity and durability.

Our FlexyDisk jacket incorporates a unique two-piece liner that not only traps damaging debris away from the media surface, but also ensures precise media-to-head alignment. The result—certified 100% error-free performance, backed by BASF's exclusive lifetime warranty.*

For information security, tomorrow and beyond, look for the distinctive BASF package with the Qualimetric seal. Call 800-343-4600 for the name of your nearest supplier.

Put 64K CP/M® 2.2 in your TRS-80 Model III and tap into 2,000 business programs.

Now you can run programs such as WordStar, dBASE II, SuperCalc, MailMerge and virtually thousands of other CP/M-based programs on your TRS-80 Model III.

CP/M 2.2 is the industry standard operating system that gives you access right now to over 2,000 off-the-shelf business programs.

Our plug-in Shuffleboard III comes with 16K of RAM, giving your Model III the power of full 64K CP/M 2.2 without interference of the ROM or video memory. In fact, the Shuffleboard will appear transparent in the TRS-80 mode and will not interfere with any DOS operation.

READ and WRITE Osborne, Xerox and IBM personal computer software plus many more popular formats.

Unfortunately, there is no standardized CP/M format for 5¼" diskettes. But we have developed a way to READ/WRITE and RUN standard programs under the following single-sided formats: Osborne 1 S/D, Xerox 820 S/D, IBM PC* D/D for CP/M 86 only, Superbrain D/D, Kapro II D/D, HP 125 D/D and TeleVideo D/D.

*Will Read and Write Only.

Easy plug-in installation.

It's so simple. The Shuffleboard III plugs into two existing sockets inside your Model III. There are no permanent modifications, no cut traces and no soldering. You'll be up and running in minutes.

New Products.

80x24 VIDEO BOARD: Features dual intensity screen, programmable cursor control for block, underline & blink rate, on-board bell with audible keyclick, battery-operated real time calendar/clock, full ASCII character set plus 256 special character graphics, dual RS-232 outputs and composite video output.

FLOPPY DISK CONTROLLER: Now you can access 5¼" and 8" floppy disk drives in any combination up to 4 drives of S/D density, S/D sided. Tap into a wealth of CP/M software which comes on 8" IBM 3740 format or Pickles & Trout CP/M for the Model II.

SOFTWARE: Additional CP/M software programs are available. Call or write for details.

OEM and DEALER Inquiries invited.

Introductory price of

\$299.

The Shuffleboard III comes fully burned-in and tested complete with 64K CP/M 2.2 and MBASIC 80 interpreter, plus software manuals and a first class user's manual — with a 1-year limited warranty and 15-day no-risk free trial — for only \$299.

See the Shuffleboard III at your dealer's now.

Once you see what the Shuffleboard can do for your Model III you'll want one at once. If your dealer does not yet stock the Shuffleboard have him give us a call. Or send check, money order, VISA or MASTERCARD number (sorry, no COD's) plus \$5 shipping per board (\$17 outside the USA & Canada)* directly to the address below. Cal. residents please add sales tax. Credit card purchases can be phoned in directly and we'll ship from stock.

Tandy: What, me worry?

After six years of stiff competition, Tandy's share of the computer market has

been trimmed to 17 percent. And it could lose another percentage point or two this year, according to *The Wall Street Journal*.

But, *The Journal* reported, Radio Shack maintains losing some of its market share isn't so bad—so long as the total market is booming.

And that seems to be the case. Personal computer sales hit \$4.7 billion last year, and are expected to increase about 65 percent to \$7.76 billion this year.

"Our experience is that in almost every product category, we lose market share after the boom stage in a market," Tandy's Director of Financial Planning Garland Asher told *The Journal*.

"But we just don't care about market share," he added. "What counts are profits."

While Radio Shack's low-end competition are engaged in cutthroat price-cutting, Asher told the daily, Tandy has refused to further cut the price of its comparable \$300 model. "In the next 12 months, we'll lose market share in the low end of the home computer market," the financial planning director said. "But we're simply not going to shoot ourselves in

Rogers: Created program to pray more effectively.

the foot" to make sales.

Still, small-computer sales will constitute an increasing share of Tandy's overall sales, he noted. In the fiscal year ending June 30, the company said it expected 35 percent of its projected \$2.5 billion in total sales to come from small computers, up from 31 percent in 1982. Tandy boasts that it expects to be the first of the top three personal computer makers (Apple and IBM are the other two) to reach \$1 billion in annual sales from the equipment.

The Journal said Tandy is the only company offering a product in every segment of

the small-computer market.

According to the newspaper, Asher doesn't believe radically new hardware will hit the market in the near future. "No one is going to blow the market away with a new piece of hardware at this point," he said, explaining everyone has access to the same hardware components. Rather, he expects to see spinoffs of existing hardware, particularly of IBM's personal computer.

Asher added Tandy may soon fill the niche between its top-of-the-line home computer and personal computers costing \$1,000 or more. And he doesn't rule out

joining other computer marketers in bringing out a product closely resembling IBM's \$2,900 personal computer.

Although Tandy's network of retail stores has given it an edge on competition so far, some people wonder if the company is as well-positioned to sell its small computers to large corporations. That market is growing at a rate of 45 percent or so a year and is expected to account for \$1.2 billion in sales of computers by 1983. It's doubtful, *The Journal* said, that purchasing agents of the nation's biggest corporations do a great deal of buying at the local Radio Shack, and Tandy has only 25 national sales representatives.

The spiritual CoCo

For Color Computer owners bent on finding Nirvana, New Yorker Alan

Rogers has software for you. The 48-year-old producer of TV commercials has created programs on his CoCo for expanding people's spiritual awareness.

Rogers—a true hacker, spending five hours a night developing and refining programs—has been giving away the software, *InfoWorld* reported, although he's paid \$20,000 for computer consultants, psychiatrists, and

PULSETRAIN

cybernetic engineers to evaluate his soulware, and for trips to the West Coast to promote his programs.

However, those costs may soon force him to start charging for his "Infinity Programs." So far, he's given away 200 of them.

Originally, Rogers created Infinity to help people pray more effectively. Then, for people uncomfortable with prayer, he developed other versions to help women develop their intuition, businessmen forecast better, and truth seekers become more meditative.

InfoWorld described the last program as a "generic, all-purpose, nonoffensive" program for people who don't want to make commitments but want to explore the different levels of their minds.

Rogers, born in Canada, likes hawking his software on the West Coast because people there are interested in spiritual things. "New York is so blasé you could set off an atom bomb and no one would react," he told the microcomputer weekly.

After loading Infinity—an Eliza program for the soul—your guardian angel, hunch, soul, or spirit commands you to begin. You type in questions and the program replies.

Rogers told *InfoWorld*:

"You contact different levels of the mind, the conscious, subconscious, unconscious, id, ego, higher self, or soul.

"You become aware of each part of the mind. The system allows you to alter your state of consciousness.

In five minutes, you've gone through five levels.

"You get levels of your mind to communicate to you through your fingertips. In a way it's true you are talking to yourself, but it's a higher level of your mind."

Rogers isn't stopping with Infinity. He plans to gather all the information in the world on the mind and computers and create the Mind Computer Research Institute.

And his next software project: use the Bible as a data base to answer users' questions.

Stringy floppy revival

Sporting a new name, the firm that pioneered stringy-floppies has landed support for its technology from one major computer maker and has piqued the interest of two others, including the Tandy Corporation.

The *Electronic News* reported Entropo had licensed Coleco to use the Sunnyvale firm's Microdrive tape cartridge and microwafer technology for the ColecoVision Super Game Module #3 unveiled at the Toy Fair.

It said Coleco would wait until August to market the Entropo technology. Entropo's agreement with Texas

Instruments, the weekly reported, allows the Sunnyvale enterprise to manufacture the technology to other companies, but bars them from licensing other firms to make it until mid-1983.

The *Electronic News* said Coleco plans to make portions of the system at its Gloverville, NY, plant and subcontract other portions to Entropo and manufacturers in Taiwan and Japan.

It said Entropo's Coleco system provides 100K of storage and retails for \$90. Texas Instruments' "wafer tape" drives cost \$139.95. The stringy floppies come in four sizes: 50 feet (\$7.95), 25 feet (\$6.95), 10 feet (\$5.95), and 5 feet (\$4.95). The largest size can hold up to 48K of data.

According to the *Electronic News*, Entropo is ramping up its production to meet the demands of Texas Instruments, Coleco and others. It hopes to produce 500,000 drives and 5 million tapes by the end of 1983.

The newspaper also said Entropo is talking to Commodore about customizing a storage system for the VIC-20 and Commodore 64 computers. The president of Entropo, Robert McDonald, served briefly as the president of Commodore's professional computer division, the newspaper said.

Texas Instruments has inked a licensing agreement with Entropo Corporation (formerly Exatron) of Sunnyvale, CA, to use stringy-floppies as mass storage devices for its 99/2 portable computer.

Tandy is also looking at

the technology, according to the *Electronic News*. Vice President for Computer Merchandising John Shirley told the weekly, "We're looking at the product. It's pretty high-speed. If they can make it as cheaply as they say they can, it's interesting to us."

The newspaper also reported Coleco had purchased a license to use the stringy-floppy technology. That was denied to *80 Micro* by Mark Yoseloff, executive vice president for Coleco. "The *Electronic News* misstated an awful lot of facts in that article," he said. "Coleco hasn't bought any such license."

"Coleco is looking at the Entropo technology along with other kinds of mass storage technology," he noted. "We haven't definitely entered into any agreements."

He added, "I think the problem was we used some samples from Entropo to make some samples we showed at the [American] Toy Fair [in New York City]. That in no way implied anything was final or that an agreement had been reached."

Hottest private cools down

Since it's gone public, Altos—the San Jose, CA, computer maker that topped *INC.* magazine's hottest growing private companies (*80 Micro*, April

TM TRS80 color

From the January 1981 issue of the CSRA Computer
Club newsletter:

There was some amusement at the November meeting when the Radio Shack representatives stated that the software in the ROM cartridges could not be copied. This month's 68 Micro Journal reported they had disassembled the programs on ROM by covering some of the connector pins with tape. They promise details next month. Never tell a hobbyist something can't be done! This magazine seems to be the only source so far of technical information on the TRS-80 color computer. Devoted to SS-50 6800 and 6809 machines up to now, 68 Micro Journal plans to include the TRS-80 6809 unit in future issues.

To get the MOST from your 6809 CPU - This is the
BEST SOURCE! The ONLY Magazine for the 6809
Computer. Months Ahead of All Others!

PULSETRAIN

1983)—has experienced a slump in profits and sales.

The slump in profits was attributable to increased advertising costs; increased research, development, and engineering expenses; and additions to the sales force.

Altos said low sales figures were caused by volume production delays of the Model 586 16-bit microcomputer introduced last year and by a major West Coast storm last Dec. 22 causing a one-day power outage at a critical point in the shipping cycle.

Altos Finance Vice Presi-

dent David Zacarias told *Computer Systems News* his firm's projections for its 16-bit machine were too aggressive and optimistic. He said the firm expected 50 of the 586s to be shipped in December. The number actually shipped was significantly less than that.

Wall Street took the company's changed projections and sales shortfall very hard. Altos' initial public offering was \$21 a share. Within a month, it was selling at \$37 a share. Lately, the stock's been trading at \$25 or less.

New CoCos?

Predictions about **NEW TANDY PRODUCTS** abound. In

END BYTES

Creative Creations, **CLIVE SMITH**, an analyst with the Yankee Group, said expect Tandy to introduce a low-cost replacement for the **COLOR COMPUTER** and a low-cost black-and-white model at

\$100 to compete with the Sinclair. ■ The **W5YI REPORT** said final figures for 1982 show Timex-Sinclair the winner in the microcomputer unit-sales department with 600,000. The VIC-20 placed second with 400,000, TI's 99/4A third, Atari fourth with 300,000, and the Color Computer fifth with 200,000. ■ On the publishing front, **SCHOLASTIC INC.** has announced two new magazines. *Teaching and Computers*, a monthly magazine for elementary school teachers, will provide "specific, clearly understandable information for classroom teachers." *Family Computing*, slated for September publication, is touted as the first national consumer magazine aimed at families with computers. And for the software publishing industry, **JEFFREY TARTER** is publishing a bi-weekly newsletter called the *Soft•letter* out of Cambridge, MA. ■ **ADAM OSBORNE**, an industry mainstay and man of direct language, laid it on the line about office computers at the Canadian Computer Conference. "You can be one of the first in your office to get one or one of the last," he said, "or you can get a new job." ■ **BOSOM BUDDIES**. After Atari and Imagic settled their differences over the latter's "Demon Attack," the pair appeared to be the best of

friends. In a joint statement, the pair said they would be "working together" on game design copyrights, with the goal of developing industry-wide standards. ■ So you thought **COMDEX '82** was big. Well, Comdex '83 will be even bigger, according to its promoters. Last year, the megashow had 3,200 booths. With this year half-gone, 4,600 booths have been sold, and the show's sponsor, the Interface Group, said it's hoping to sell 5,500 booths before the festivities begin November 29. ■ If you like programming, **BRIDGE** may be the game for you. World class bridge player Chip Martel notes that among bridge buffs the most common profession is computing because of the logic required to succeed in the game. ■ In the **TASTELESS GAMES DEPARTMENT**, Wizard Video Games of Los Angeles has developed entertainment based on the film *Texas Chainsaw Massacre*. In the game, the player is Leatherface, who chases people in a field and kills them with a chainsaw. ■ There must have been some red faces at the U.K. fortnightly **MICROSCOPE** when it published its story on the Model 16 using the Xenix operating system. With the piece, the newspaper ran a photo of "Tandy chairman Gates." The pic was of **BILL GATES**, chairman of Microsoft. ■ **GREED** probably accompanies any booming industry, and the microcomputer business is no exception. For that reason, it should not have surprised the editors here when one of our readers requested Bruce Tonkin's address because he thought we'd forgot to publish it with Tonkin's Creator article in January. The reader was crestfallen when informed we had published Tonkin's whereabouts. He had intended to sell the address to other chipsters. ■

Our People, Our Product: Both Are Specialized.

Red Baron is an organization of computer printer
specialists. They know the capabilities of each
printer, and how to match one to your exact need.
Call for expert consultation today!

Here's How To Order:

Phone orders are welcome; same-day shipment on
orders placed before 11:00 a.m. Free use of Master-
Card and Visa. COD's accepted. Personal checks
require 2 weeks clearance. Manufacturer's warranty
included on all equipment. Prices subject to revision.
APO/FPO Orders Welcome.

TAKE II

This column will feature Model II, 12, and 16 conversions of earlier programs. Readers who have converted programs for their own use are encouraged to submit them.

Star Track first appeared in an article by Joey Robichaux entitled "To Boldly Go..." on p. 156 of the 1983 Anniversary Issue of *80 Micro*. This Model II conversion was submitted by Byron Lott, 913 Inverness Way, Sunnyvale, CA.

The program lets you determine the position (right ascension and declination), distance from Earth, angular size, and phase of any planet in the solar system. You can determine the positions of the sun and moon, and their rise and set times. You can calculate precession from the three most common epochs (1950, 1975, 2000), and determine rise and set times for any celestial object. Star Track also helps you convert mean standard time to sidereal time, and vice versa.

Star Track is not so accurate that it considers refractions or planetary perturbations, but it's fine for amateurs.

Dictionary of Terms

Terms introduced in Star Track include: right ascension (RA), declination (DEC), precession, and epoch. The concepts involved are simple, and once you understand them you can locate any celestial object with star charts.

RA and DEC, similar to latitude and longitude, help locate objects in the sky. Latitude refers to how far up or down an object is from the equator. Numbers range from zero to 90 degrees; zero degrees is a point on the equator, while 90 degrees north or south is either of the two poles. Latitude is expressed in degrees, minutes, and seconds; 60 seconds equal one minute, and 60 minutes equal one degree.

Longitude refers to how far around the Earth a point is on its surface. Since no north-south circle exists from which one can measure longitude, Greenwich, England has long been designated zero degrees longitude. Points west of this are west longitude; points east are east longitude. Longitude is also expressed in degrees, minutes, and seconds.

Declination (DEC), is similar to latitude and uses the same reference point, the equator. For example, if the Earth is a spinning ball in the center of a giant sphere, and the circle formed by the Earth's equator were to expand until it touched this celestial sphere, it would trace a great celestial equator. Declination is measured in degrees north and south of this imaginary equator.

Like longitude, right ascension (RA) has an arbitrarily assigned reference point: the vernal equinox, or the first point of Aries. Star charts and positions are computed using this

reference point.

Until now, RA and DEC have been almost identical to latitude and longitude. Now RA is expressed in hours, minutes, and seconds instead of degrees, minutes, and seconds. An hour isn't a unit of time here, it's a unit of measure equal to 15 degrees. There are 24 hours in a circle, just as there are 360 degrees in a circle ($24 \times 15 = 360$).

Right ascension is measured traveling west from the vernal equinox—RA 0h 0m 0s. If you travel 90 degrees to the west, you're at RA 6h 0m 0s. Continue to 270 degrees and you're at RA 18h 0m 0s. When you complete the circle, you're back at RA 0h 0m 0s, so that RA 24h = RA 0h 0m 0s.

Precession applies to bodies that move a certain distance over a set period of time. Some stars move one degree in a particular direction each year; others have a steady precession—their locations or coordinates are always changing.

Star charts are written for particular epochs—currently either epoch 1950 or epoch 2000—since star coordinates aren't the same each year. While neither of the epochs is exactly correct now, the error is slight and doesn't affect amateur observing. Star Track uses epoch 1975 as a compromise between 1950 star charts and 2000 star charts; it refigures coordinates to new epochs.

Using the Program

When you load and run the program, three title pages appear. Each remains on the screen for three seconds while the program loads the necessary variables. The master menu has six options. Selecting option 1 gives you another menu that lets you choose from the nine planets and an option to return to the master menu. Once you select a planet, enter a date in MMDDYY format; use any date from 1950 to 2000.

Star Track then displays the RA and DEC of that planet. Press 1 to see the angular size, phase, and distance from Earth in AU, or press the space bar to return to the last menu.

The menu for option 2 lets you determine the sun's coordinates, distance and angular size, time of sunrise or sunset, or return to the master menu.

If you select option 3 (the moon menu) you are prompted for your approximate latitude. The number should be positive if you live north of the equator, negative if you live south of the equator. This option lets you determine the moon's coordinates, distance, angular size and phase, and rise and set times. When you are prompted for the time, enter it using the military format (i.e., 1800 = 6 p.m.).

Option 4 on the menu lets you convert coordinates to another epoch. The epoch is a four-digit year with an additional decimal digit denoting the parts of the year. So, since June 1982 is halfway through the year, it is entered as 1982.5.

Once you enter the epoch you desire, enter the RA in HHMMSS format and DEC in DDMMSS format. Once again, declinations north of the celestial equator are positive; those south of the equator are negative.

Option 5 lets you convert mean time to sidereal time, and vice versa.

Hints

- All rise and set computations require your approximate latitude.
- Daylight-saving time is not used.
- Once you have entered the date, press enter to following date prompts: that same date will be used. ■

NODVILL DIET PROGRAM

\$69.95

"TAKE A BYTE"

MAINTAIN, LOSE OR GAIN WEIGHT
Without Thru the Kitchen, Around the Table!

The NODVILL Diet PROGRAM Take a Byte

- Calculate caloric and nutritive food intake
- Evaluate nutritive value of your diet
- Compare daily diet to individual RDA Chart
- Create personalized daily meals and menus
- Plan varied daily menus based on sound nutrition
- Save records of daily meals and menus for future planning
- Print nutrition charts, food, meal, menu and grocery lists

Take a Byte is a Modular BASIC Program

MAIN Program Menu:

- (1) Recommended Daily Dietary Allowance (RDA) CHART
- (2) 133 Expandable Random Access FOOD LIST Data File
- (3) 28 Nutritional MEAL LIST Data File Examples
- (4) 7 Balanced DAILY MENU LIST Data File Examples
- (5) GROCERY LIST Program Module
- (6) 25 Page USER'S MANUAL including Charts and Tables

All Data Files can be EXPANDED and MODIFIED systematically and flexibly to reflect your personal diet. Your choice of Diet Book or your doctor's suggested diet.

Free menu brochure on: Call 703-471-6442

CoCo RAM WARS VICTOR — APPROACHES 96K —

The specifications for the CoCo's memory control device allow for 96K address locations which the CoCo exploits as follows: \$8000 to \$FFFF for system requirements, internal ROM and cartridge ROM, \$0000 to \$7FFF are managed by a software controlled page bit allowing for two pages of DRAM with 32K each, the CoCo operating system uses one of these pages for a maximum of 32K DRAM

With the ROM locations overlaid with DRAM, and with 64K of DRAM installed at the paged locations, machine language software can occupy almost 96K of DRAM excluding system reserved space.

To receive circuit diagrams and construction details for our approach to this major internal hardware modification (ROM software can be transferred to DRAM, the expansion port is not used, and software, hardware and operating systems are not included) send \$35.00 to: CoCo CUBED, 416 Dunn Hill Road, RR #3, Durham, CT. 06422. In Conn. add 7 1/2% sales tax, outside U.S.A. add \$5.00 postage and handling. ✓346

**SLICK PAGES? NO!
GREAT DEALS? YES!**

Computer Shopper pages aren't slick because they were designed for one purpose: to put buyers in touch with sellers at the lowest possible cost. This resulted in bargains on new and used equipment and software. Individuals nationwide are able to list their pre-owned items for only a few dollars. This created hundreds of classified ads in over 100 big 11x14 pages.

And to make sure there were enough buyers for advertisers, the subscription price was set low, too!

So strike your first deal by taking advantage of this special trial subscription offer, today! **6 months, \$6 or 12 months, \$10.** Money back guarantee. MasterCard and VISA accepted.

This graph was produced with less than two dozen keystrokes on a TRS-80 Model I with EPSON MX-80 printer plus GRAFTRAX.

YOU CAN DO IT TOO WITH **AUTOPILOT**, the sensational automatic curve plotter written in BASIC + fast machine language.

- Plot functions $y=f(x)$, $x=f(y)$, or $x=f(v)$, $y=g(v)$
- Plot data from keyboard or disk file
- Linear or logarithmic presentation
- Numeric integration or differentiation
- Automatic scaling and labelling of axes
- 4 different print sizes and formats
- Many more features

AUTOPILOT for TRS-80

JFD-III Floppy Disc Controller Kit

NOW ONLY \$279⁰⁰

Thousands of our controllers have been installed and the user satisfaction has been tremendous. Those who have compared the rest say that ours is the best.

Kit includes controller board, mounting brackets, cables, power supply for 2 internal drives, and illustrated instructions. This controller has been tested for compatibility with most major operating systems including TRSDOS, LDOS, NEWDOS/80, DOSPLUS, and MULTIDOS. The controller supports any mix of 5 1/4" drives including single or double density, single or double sided, 35, 44, 77 or 80 track drives.

JHD-III Winchester for TRS 80 Model III

5 Mbyte formatted — \$1,795 10 Mbyte formatted — \$1,995

These drives plug into the 50 pin I/O expansion port. System includes host adaptor, cables, fan cooled cabinet. Controller features 11 bit error detection and correction, automatic track remapping and variable sector interleaving. An LDOS compatible driver is included with the kit for those who already own LDOS.

TERMS: Cashier's Check or COD. Personal Checks take 3-4 weeks to clear.

XYZT

COMPUTER DIMENSIONS, INC.

new INTERACTIVE COMPUTING ENVIRONMENT

will integrate all your programs, utilities, spreadsheets, wordprocessor, business applications games ... into one efficient user friendly system!

INTERACTIVE CONTROL and PROGRAMMING LANGUAGE (ICPL)

\$150.00

The heart of the whole system — powerful high-level language with "OPEN" architecture — new commands and functions can be added to it, used and then removed when not needed any longer, all at execution time. This flexible approach allows you to create configuration that best fits your needs. Among the additional commands are display management, database, arithmetic, etc. You may write your own new commands too! Best of all, you can execute ICPL commands directly from BASIC program. That means that you can use full power of ICPL to perform full screen I/O, file access, printing, while rest of computations can be done in BASIC. Ideal for development of serious applications and personal use.

SCREEN MANAGEMENT FACILITY

\$75.00

The most flexible screen management facility ever written for the micro. Full screen input/output with as little as one command. Programmable function keys, insert/delete within field, extensive editing and validation of data such as date, time, amount, numeric fields, full cursor control, protected and input fields, messages, etc. Easy definition and changes, no special processing required, can be used directly from BASIC. Even more — screen can be changed without changing program that uses it. Screens can be produced with any wordprocessor-just type screen image, save it to disk and screen is ready for use.

MENU FACILITY. (comes at no charge with screen management)

Simple to use yet unbelievably powerful. Create your own menus in a matter of minutes and link them together. Unlimited number of selection menus, can be organized both sequentially and hierarchically. Each menu can have a number of input windows retaining information between sessions. Application programs, spreadsheets, wordprocessors, games, DOS functions... can be executed directly from menus. Help screens will assist you in making selection.

DATABASE FACILITY

\$75.00

A real working horse. Unlimited number of files, each file of up to 255 fields of 64 characters each. Unlimited number of keys — every field can be a key. True multikey access — no sorting required — retrieve record by any key, by exact value or even by partial key value. Forward scan is allowed — ideal for inquiries and reports. Full set of commands — add, read, update, delete, find, next. A special function indicates success of operation. 3 levels of key readiness allow fast data entry mode and fast retrieval — really flexible. Easy file definition and maintenance. Fully compatible with SCREEN facility. Can be called directly from BASIC program.

REPORT WRITER

\$75.00

All kinds of reports, invoices, mailing labels, customized letters, special forms can be easily specified and printed out with computations, totals and sub-totals, headers and trailers. Same as screens and menus the forms can be created using any wordprocessor and easily modified without changing programs. The output can be routed to display to provide fast inquiries.

LIBRARY SUPPORT OPTION

\$75.00

A must for every serious computer user. Allows creation of libraries for logical organization of your files and programs. Saves space, increases speed of operation, eases file manipulation. Fully transparent — regular DOS commands can be used to COPY, LIST, PRINT, KILL, LOAD ... etc. directly from/to libraries. Compatible with application programs. Up to 240 files per library, practically unlimited number of libraries. If you ever run out of directory entries — LSO is the answer!

SPECIAL OFFER — ICPL AND ANY MODULE FOR ONLY 199.00

FINALLY! ZORKTM for the TRS-80[®]

Infocom's legendary classic adventures, **ZORK II: THE WIZARD OF FEAR** and **ZORK III: THE KING OF MASTERS**, are now available for TRS-80 Models I and II. **REALM, STARCH, and SUSAN** are also available, with more games on the way. We have them in stock. Circle us on the reader service card for faster response, send a self-addressed stamped envelope for

Zork Users Group
Dept. 80
PO Box 21023
Milwaukee, WI 53220

Infocom, Zork, Wizard, King, Real, Starch, Susan, and the other names are trademarks of Infocom Corporation.

Coming Next Month

The most important TRS-80 since the Model I has arrived. The Model 100 was introduced as we went to press; in July, you'll see the most thorough review yet. We're even working on some portable programs.

Also, the July 80 *Micro* will have you speaking in tongues—or at least in different programming languages, as the issue takes a special look at that topic.

We'll have Cobol studies, a Fortran library routine, a mini-assembler, and a lesson in Assembly-language disk input/output. Richard Sprague's August

1981 race-car game reappears in *Fort* thanks to Art Wetmore, and Barry Hunt translates Pac-Man into Tiny Pascal.

Getting back to Basic, there's Don Rowe's anticompile—a program that reverses the compiling process for USR users, producing Basic code from machine language. Karl Townsend offers a tutorial on random access for tape-based systems, and Edward Johnson's utility lets you take time out for mathematical calculations while writing a program. ■

Smallware™

Our software is making a name for itself.

Smallware. That's what we've named our unique software designed for microcomputers. Smallware offers much more than ordinary software: high quality, customer support and a complete product line. You can buy software anywhere. But for the special features of Smallware, The Small Computer Company is your one and only source.

The Small Computer Company is known to many as the company who developed the filing system software Profile® II, Profile Plus and Profile III Plus for Radio Shack; and filePro™, our CP/M® version.

Now, whether you're a microcomputer end-user, dealer or manufacturer, you can order our Smallware directly from us.

Here are just some of the enhancements we offer to Model III users:

PROSORT: If you need to select records for a report by more than two criteria (income, zip code, purchases, etc.) Prosort lets you use up to sixteen. Once selected, the records can be sorted by up to five criteria (zip code, within state, by last name). Prosort also offers substantially greater sorting capacity. . . \$150

FORMS: If you prepare forms that require several lines of data, from invoices to shipping instructions, Forms is invaluable. It allows you to print individual forms (up to 13" x 11") with graphics, trademarks, logos, underlining, subscript and superscript functions. \$125

ARCHIVE: Lets you maintain up-to-the-minute, clean files by removing inactive records and transferring them to a pre-determined list or file; split an existing data base into any number of specialized files; free substantial disk storage space. \$150

PROPACK™: A tool that lets BASIC programmers more easily customize Profile systems. The resulting programs are shorter, easier to write and faster running. Propack also gives the BASIC program indexed access to Profile data \$75

For Model II, 12 and 16 users, there's Quikback™ with Format, Display, Transfer, 8 Line Reports With Math, Math Upgrade for Profile Forms, Math 64, Propack and more.

The Small Computer Company does more than create award-winning Smallware. Our commitment to the customer extends to custom design as well as system consultation.

For further information, call (212) 398-9290. To order, ask for Mr. Burton.

The Small Computer Company, Inc.

230 West 41st Street, Suite 1200, New York, New York 10036

Traveling Games

Soon hundreds of thousands of kids will be loaded into cars and forced to ride hundreds of miles. This is called the summer vacation trip.

During these trips, kids make five standard remarks and their parents make five time-worn replies:

Child: *I'm hungry!*

Parent: *Do you want another cracker?*

Child: *Are we there yet?*

Parent: *No.* (This answer is always no.)

Child: *I'm sick!*

Parent: *Don't look out the window and get dizzy.*

Child: *I have to go to the bathroom!*

Parent: *How long can you wait?*

Child: *I'm bored!*

Parent: *How about a game?*

To this last suggestion, the child might well reply: *Oh no, not license-plate bingo again!*

Indeed not. This month in the Fun House we're passing

Color Computer
16K RAM, Cassette Basic
32K RAM, Disk Basic

out game packets for emergency highway use.

Yes, I know you don't have a computer in the back seat of

your car. The idea is to learn games on a computer so you can play them on the highway. Also, one person can play the games with the computer acting as referee, scorekeeper, and sometimes opponent.

All four of this month's pro-

grams run in either Level II or on the Color Computer. Only Wordstep needs a bit of modification.

Fizzbuzz

This is the shortest and trickiest program of the month. You've probably played the game called Buzz. In it, you and one or more other players start counting, but, you must say

FROM THE ARCADES OF TOMORROW . . .

STRATOS

ATARI VERSION BY
NEIL LARIMER
TRS-80 VERSION BY
JOHN COMINIO

A MICROCOMPUTER EXPERIENCE FOR TODAY

Arcaders who've seen and played the ATARI and TRS-80 versions of STRATOS came to the same conclusions — these state-of-the-art games were ahead of their time. After all, any program that boasts crisp graphics, punchy sounds, joystick compatibility and a full complement of extras, like high score saving and multi-player option has a definite touch of tomorrow.

THE GAME'S SCENARIO IS A REAL KNOCKOUT

The object is to successfully defend a futuristic city from waves of attacking alien ships.

ATARI SCREEN SHOT

The battle begins! Atari version features colors and sounds that YOU can change!

And these crafty alien critters are just part of a rapid-fire graphics bonanza that includes meteor swarms, multiple attack waves, and even a free-moving saucer that will repair your city's damaged force field on the ATARI version.

GOOD NEWS

You don't have to wait years for the spectacular — STRATOS is available now for the ATARI and TRS-80 systems.

STRATOS. Entertainment of the future — today.

TRS-80 SCREEN SHOT

The TRS-80 version blows you away with its Arcade Action Graphics(tm)!

buzz if the number has a 7 in it or is evenly divisible by seven.

Fizzbuzz is like that, only more so. You also have to say fizz if the number ends in a 5 or is evenly divisible by five.

There are more rules, so put on your thinking cap. Let's start by counting to 10 according to the rules: 1, 2, 3, 4, FIZZ, 6, BUZZ, 8, 9, FIZZ. The number 5 has a 5 in it, and the number 10 is evenly divisible by five, so they are fizzes. The number 7 has a 7 in it, so it's a buzz.

Above 10, it gets trickier. The number 14 would be 1BUZZ; you say the first number and buzz because 14 is divisible by seven. In the same way, 15 is 1FIZZ.

The number 35 has a 5 in it and is also divisible by seven, so it's 3BUZZFIZZ.

Oh, did I say that numbers beginning with 5 start with FIZZY, as in FIZZY1 for 51? And did I mention that numbers starting with 7 begin with BUZZY, as in BUZZY8 for 78?

I could tell you more, but I'll let you find BUZZYBUZZ-FIZZ, FIZZYBUZZ, and BUZZYBUZZ on your own.

You don't have to know how to play to start. The computer plays against you—perfectly, of course—and the object is to see how close to the number 99 you can get.

To start, the computer asks who will play first. Enter Y if the computer plays first or M if you want first turn. Then the count begins. Whenever you make a mistake, the computer tells you the answer and invites you to play again.

Fizzbuzz could use up quite a few miles, couldn't it? Also,

YOUR TRS-80* NEEDS

*TRS-80 is a trademark of Radio Shack division of Tandy Corp.

**Read this ad and give us a call.
TOLL-FREE, 800-258-5473.

It needs software before it can do anything. And good software is as valuable as any piece of hardware you can buy.

The Encyclopedia for the TRS-80 is a ten-volume reference series with over 200 programs for the Model I, Model III, and Color Computer. In each volume, you'll find:

- BUSINESS
- GAMES
- HARDWARE
- TUTORIALS
- EDUCATION
- GRAPHICS
- INTERFACING
- UTILITIES

Photographs, schematics, and program listings provide the essential detail you need for programming and tinkering.

**TOLL-FREE
1-800-258-5473**

SAVE TIME.

**TOLL-FREE
1-800-258-5473**

With running the programs once you have them. **Encyclopedia Loader** provides direct loading of programs and saves you the time of typing and debugging. These ten 30-minute cassettes have selected listings from each volume, ready for you to load and use.

Loaders and softcover Encyclopedias are available separately or in sets.

Don't Put Up The White Flag.

Get some help for yourself and your TRS-80 with the **Encyclopedia for the TRS-80** and **Encyclopedia Loader**.

BEST DEAL!

Shipping and handling: \$1.50 per volume for single volumes of books and cassettes, \$10.00 per item for foreign air mail. All Encyclopedias shipped UPS with complete street address; all Loaders shipped 1st class mail.

Photocopy of coupon is acceptable for ordering.

**FOR TRS-80 MODEL I OR III
IBM PERSONAL COMPUTER**

The MMSFORTH System. Compare.

- The speed, compactness and extensibility of the MMSFORTH total software environment, optimized for the popular IBM PC and TRS-80 Models 1 and 3.
- An integrated system of sophisticated application programs: word processing, database management, communications, general ledger and more, all with powerful capabilities, surprising speed and ease of use.
- With source code, for custom modifications by you or MMS.
- The famous MMS support, including detailed manuals and examples, telephone tips, additional programs and inexpensive program updates, User Groups worldwide, the MMSFORTH Newsletter, Forth-related books, workshops and professional consulting.

mmsFORTH

A World of Difference!

- Personal licensing for TRS-80: \$129.95 for MMSFORTH, or "3/4TH" User System with FORTHWRITE, DATAHANDLER and FORTHCOM for \$399.95.
- Personal licensing for IBM PC: \$249.95 for MMSFORTH, or enhanced "3/4TH" User System with FORTHWRITE, DATAHANDLER-PLUS and FORTHCOM for \$549.95.
- Corporate Site License Extensions from \$1,000.

If you recognize the difference and want to profit from it, ask us or your dealer about the world of MMSFORTH.

learning the game on a computer will make you a Fizzbuzz expert.

Taffy

This word game isn't about candy. It's called Taffy because of the way you pull words apart and put them together as you play.

The computer has a list of 50 words from which it chooses a secret five-letter word that you must guess within 30 tries. That list is in data lines 140-180. It is best that all the letters of your guess word be different.

The computer gives you one point for each letter in your guess word that matches the secret word. You might have two points in one turn and none in the next. The computer gives you clues about letters in its word.

A good way to play is to write out the alphabet. Using logic, cross out letters that do not seem to be in the secret word. In time, if you're good at this, you'll guess the five letters. Then you must guess the letters in the right order—the secret word—to win.

Notice that all the secret words have no repeated letters, so it's to your advantage to guess with words that don't repeat letters either.

Wordstep

This is an easily played but tough-to-beat game. If your computer runs in Level II, type the program to line 620 END and stop.

If you have a Color Computer, do the same thing, then re-type lines 270, 460, 500, and 520 as they are given at the bottom

of the program where it says, "To adapt for Color Computer, enter following lines:".

In Wordstep, the computer shows you a starting letter. First, you type a two-letter word starting with that letter, then a three-letter word, then a... you get the idea.

You have until the timer reaches 100 to create a wordstep ending in a 14-letter word. All words must start with the letter you're given at the beginning.

The program plays referee. It refuses words that are the wrong lengths or don't start with the correct letter. To erase a try that's no good, type /, the slash mark on the same key with the question mark. To register a word, tap enter.

If you reach a 14-letter word, you have my sincere congratulations.

Essay

I know summer vacation is just beginning, so maybe this isn't the time to talk about going back to (yuck) school in September.

Even so, now is the time to gather material for the first task your teacher will give you when you return: the What-I-Did-This-Summer essay.

To show you how much fun an essay can be, I've written an essay generator. There are no rules, thank goodness. You just run it and read it. Every time it should be different.

This morning a very large crate was delivered to the Fun House. On it was a sign that said *Materials for July Fun House Visit*. I wonder what's inside. Be here to open it next month. ■

Load 80 has a new disk-transfer system! This means that Load 80 disks boot on both the Model I and III and let single-drive users transfer Load 80 files without begging or borrowing a second drive.

To use the new disks, transfer their files to your TRSDOS system or data disk as follows:

- Back up a TRSDOS disk and purge it of any old visible files.
- Insert the Load 80 disk in drive zero of your Model I or III.
- Press the reset button. After your computer boots the Load 80 disk, it displays the Load 80 logo for a moment, and then a list of programs on the disk appears.
- Two-drive users: Insert your TRSDOS disk in drive 1. This is the destination disk and drive.

Single-drive users: When the com-

Load 80's new transfer system

puter prompts for the destination drive, press the zero key. The computer then tells you to mount the destination disk.

- If there is not enough space on the disk to transfer all files, the computer offers to transfer only the files you specify. The computer won't transfer a file if there isn't enough room on the destination disk.

- Two-drive users: The computer

transfers the files, reports on each file as it does, and tells you when it's finished.

Single-drive users: Swap the source and destination disks one time for each file transferred, and one more time to transfer the directory. The computer prompts you through the procedure, but be careful not to confuse your source and destination disks.

One final point: Because the new Load 80 disks contain both single- and double-density tracks, you can't back up this disk. However, once you've transferred the files, you can (and should) back up the disk you've created.

Old Business

Last month, Art Huston began discussing the differences between TRSDOS and DOSPLUS. Let's continue with the Build and Do commands.

These commands let you build a list of DOS commands and then process them in order. A sample application would be to take a directory, turn on the clock and enter Basic every time you boot-up.

The syntax for building a file is:

BUILD filename

If you don't specify an extension, the file is given an extension of /BLD. Then type as many DOS commands as you want, pressing enter after each. To end the build session and return to DOSPLUS, press break. To extend a file, type "BUILD filename" again. You cannot edit a Build file; you must kill and then reconstruct it.

To execute a Build file, type:

DO filename

The default extension is /BLD. Each DOS command is executed in order.

You may want to use the Auto command to do a file each time you press reset.

The Pause command is included to halt the operation of a Build file until the operator presses enter. The syntax is:

PAUSE message

The Basic included on DOSPLUS is compatible with TRSDOS in all but one respect: The proper command to go from Basic to the operating system is CMD, not CMD"S". ■

TRUNKS FOR THE MEMORIES.

Introducing the most logical place to store Elephant Memory Systems® (or lesser brands of disks): The Trunk.

With its alphabetized library index, you can file or retrieve up to 60 disks, instantly.

The Trunk is made of durable molded plastic with a hinged, one-piece lid, to keep disks safe from dust, dirt, and other detriments which disks despise.

And, it's portable. Because the lid doubles as a carrying handle so your Elephant Memory Systems® disks can go anywhere you do.

There's a model for 5¼" and 8" floppies, as well as a cassette-and-game file and a special Atari® version.

So if you're looking for the best disk storage system on the market...

The Trunk is an open-and-shut case.

THE TRUNK. ENDORSED BY ELEPHANTS.

Elephant Memory Systems® Disks

A full line of top-quality floppies, in virtually every 5¼" and 8" model, for compatibility with virtually every computer on the market. Guaranteed to meet or exceed every industry standard, certified 100% error-free and problem-free, and to maintain its quality for at least 12 million passes (for over a life-time of heavy-duty use).

*Marketed exclusively by Leading Edge Products, Inc., 225 Turnpike Street, Canton, Massachusetts 02021.

READER SERVICE

This card valid until July 31, 1983.

Please help us to bring you a better magazine—by answering these questions.

My vote for the best advertisement in this issue goes to _____ (company) whose Reader Service number is _____.

A. How much have you invested in computer software during the last 12 months?
☐1. Nothing ☐3. \$100-\$250 ☐5. \$500-\$1,000
☐2. Less than \$100 ☐4. \$250-\$500 ☐6. Over \$1,000

B. How do you acquire most of your software?
☐1. From software houses ☐4. Program it myself
☐2. From magazines ☐5. Copy it
☐3. From friends and other programmers

C. Where do you buy most of your computer hardware?
☐1. Radio Shack store ☐4. Mail order
☐2. Other computer/electronics store ☐5. Used equipment dealer
☐3. Department store ☐6. Private individual

D. What type of TRS-80[s] do you own?
☐1. Model I Level I ☐4. Model III Level I ☐7. Model 12
☐2. Model I Level II ☐5. Model III Level II ☐8. Color
☐3. Model II ☐6. Model 16 ☐9. Pocket

E. How much have you invested in computer hardware (including peripherals) during the last 12 months?
☐1. Nothing ☐4. \$2,000-\$3,000 ☐8. \$4,000-\$5,000
☐2. Under \$1,000 ☐5. \$3,000-\$4,000 ☐7. Over \$5,000
☐3. \$1,000-\$2,000

F. How much do you plan to spend on computer hardware (including peripherals) during the next 12 months?
☐1. Nothing ☐4. \$2,000-\$3,000 ☐8. \$4,000-\$5,000
☐2. Under \$1,000 ☐5. \$3,000-\$4,000 ☐7. Over \$5,000
☐3. \$1,000-\$2,000

G. Which of the following peripherals do you plan to buy during the next 12 months?
☐1. Printer ☐6. Voice Synthesizer
☐2. Modem ☐7. Disk System
☐3. Plotter ☐8. Expansion Interface
☐4. Joystick/Game Paddles ☐9. Monitor
☐5. Light Pen

H. Do you ever write Assembly-language programs?
☐1. Yes
☐2. No

I. Do you invest in the stock market?
☐1. Yes
☐2. No

J. The articles in 80 Micro are:
☐1. Too simple ☐2. Too complex ☐3. Just right

K. Which of the following columns do you read? Please rate them on a scale of 1 (seldom read) to 5 (always read).
☐1. Remarks ☐5. Copernicus Mathematics ☐9. The Color Key
☐2. Commander 80 ☐6. MONEY DOS ☐10. The Next Step
☐3. The Gamer's Cafe ☐7. Fun House ☐11. Suite 16
☐4. News ☐8. Feedback Loop ☐12. Medical Opinion

M. If you are not a subscriber please circle 500.

Reader Service: To receive more information from any of the advertisers in this issue of 80 Micro circle the number on the Reader Service Card that corresponds with the Reader Service number on the ad in which you are interested. You will find numbers, preceded by a ✓, near the logo of each advertiser. Complete the entire card, drop into a mailbox and in 4-6 weeks you will hear from the advertiser directly.

The GAMER'S CAFE

by Rodney Gambicus

Sandusky, OH, Spring 1983. A battered yet beaten old van sits on the beach at Cedar Point beneath an azure morning sky. Across the bay lies the amusement park, its pinnacles of pleasure pasted to the horizon. An occasional burst of gaiety from the ferris wheel wafts across the sand, tickling the nose of the van before drifting out to sea.

The van's door slides open. A man, known to his comrades only as Mad Max, steps out, dressed in shorts and reflecting sunglasses. He stretches, inhales deeply the pungent breeze.

"Ah... I love the smell of Erie in the morning!" he says.

"I'm hungry. What do we have to eat around here?" Mercedes asks as she emerges from the van.

"You're always hungry," I reply. "For heaven's sake, we ate just last week."

"Let's go into town and get some food," she continues.

I smile. The witty repartee amuses me. But why are hundreds of little hamburgers emerging from the sand?

I hear strains of Wagner music. From the causeway? The hunger! The hunger!

I am driving. Mercedes sits next to me. Max is in the back playing Cosmic Fighter. We are cruising down Columbus Avenue.

"I'm worried about Max," Mercedes says. "I mean, ever since that Ken Jackway blew him off the board in Cosmic Fighter, he's been acting very weird."

Max screams.

"He seems OK to me," I say.

Strictly from hunger

"It's impossible! 581,280 can't be done!" he cries.

"There's a store," I hear Mercedes say. "Let's stop and get some peanut butter and crackers."

Suddenly, a giant banana runs across the road. Six guys with a bathtub full of ice cream are chasing it. The banana is whimpering, and I am profoundly disturbed.

We are sitting on a park bench, munching our crackers. We didn't have enough money for peanut butter. In front of us is a statue of a boy holding a boot from which water pours. He is laughing at us.

Mercedes reads the mail. "Take a look at this one," she says. "This guy Rich Fiore has figured out how to cheat at Poltergeist and Microbes."

"On Level I of Poltergeist, if you hold down either joystick button, few or no cars will appear. On Level II, I've noticed that it is possible to walk through the obstacles and even the Poltergeist! In Microbes you can cheat by pressing the shift and @ buttons at the same time when the prompt 'What's your name?' is displayed. Your ship rotates faster and shoots more often."

"He also wants some tips on how to get out of Pyramid."

Max is indignant. "Cheat on your taxes, cheat on your exams," he spits through his crackers. "But cheat on a game? My God! Has he no honor? I hope he never finds his way out of Pyramid!"

Max is a harsh man, I think, as I watch him trample a cluster of M&Ms scurrying across the pavement.

Eliminator patch by Greg Hanssen (Honolulu, HI). Runs on Model I under NEWDOS80.

Expensive Expansion

EXPENSIVE – The LNW *System Expansion II* and built-in comes with a full 32K of 200ns RAM; RS232c 20 MA current loop serial interface. That's for starters. Next, consider our heavy gauge steel case, power indicator lamp, gold-plated connectors, FR-2 glass epoxy circuit board with solder mask and silk screen legends. Then there is the parallel printer port, screen printer port, real time clock, and extra heavy duty onboard power supply with over current protection, over voltage protection and thermal shutdown. If that's not enough then there is the floppy disk controller, guaranteed operation at a 4MHz CPU speed and our 6 month warranty. Every one of these features is *STANDARD*. This is true system expansion. You get every 'expensive' feature without spending more.

CHEAP – Our price is \$399.95. Any way you compare, features or price, LNW's *System Expansion II* is the clear winner. The LNW System has been field tested for over two years with thousands of users. It works with any DOS, is 100% TRS-80 Model I compatible and it works 'right out of the box'. If there is any doubt in your mind as to whether you should buy ours or the 'other guys', just ask an LNW owner!

WE ARE #1 – Number one in price, features, reliability, performance and delivery. LNW is committed to 'expensive' features and quality at reasonable prices. LNW is committed to support, thorough documentation, and reliability.

LNW Research Corp.

2620 WALNUT Tustin, CA. 92680
(714) 641-8850 (714) 544-5744

This has made us the number one manufacturer of system expansion units and accessories for the Model I computer. **EXPANSION OPTION** – 8-inch drive capability is as easy as plugging in the *LNDDoubler 5/8* option*. Now you can have any combination of single- or double-density, single- or double-sided, 8" and/or 5" disks on-line! 8-inch disk storage increased to 591,360 bytes – 77-track single-sided, double-density or 1,182,720 bytes – 77-track double-density, double-sided.

The *LNDDoubler's* unique 5/8 switch allows you to boot from 5- or 8-inch system disks and it's accessible from outside the interface. The \$219.95 *LNDDoubler 5/8* comes with a double-density disk operating system (DOS+ 3.3.9), complete with BASIC and utility programs... ready to run your software.

Each of your present 40-track, single-sided 5-inch drives will store up to 184,320 bytes (formatted storage) – that's an 80% increase in storage capacity for only half the cost of just one disk drive. With three 8-inch double-density, double-sided drives your Model I will have 3.75 Megabytes of online storage – that's more storage than a Model II or Model III!

*8" drive operation requires special cable, 8" double-density requires 3.55MHz CPU speed-up modification or LNW-80 4MHz computer.

I have finally topped Dean Mitchell's high score of 271,300 in Eliminator.

"Anybody can get 500,000 with 99 ships and 99 bombs," says Mercedes scornfully.

We are in the parking lot at the Cedar Lanes bowling center. The lot is empty except for the van, our computers on

card tables, and 500 square-dancing eggplants.

"You aren't actually going to publish this program, are you?" Max asks.

"Sure," I say. "It's just another tomato in the chef's salad of computing."

"This is disgraceful!" he bellows. "First we let cheaters give tips in the column. Now we tell everybody how to get

as many ships and bombs as they want in Eliminator! It's anarchy! It's a sham! It's the end of civilized gaming as we know it!"

Max starts quoting long passages from Toynbee and Emerson, and I turn my attention to the weather. It is raining lentil soup.

"Hey, let's at least finish off the scoreboard," grumbles Mercedes.

"What about my high scores in Bable Terror and Time Runner?" says Max.

"You're just upset because John Hope deep-sixed your Sea Dragon score," Mercedes replies.

"Ah, that's a wimpy game anyway," Max mutters.

"This Richard Uglum got 74,800 in Donkey King," Mercedes reads from the pile of letters.

I am distracted by an English muffin crawling out of the PMC's disk drive.

"He says there's an error in the second barrel screen," Mercedes continues. "You can go under the first barrel by jumping out from under it. Problem is, you sometimes get points."

I grab the muffin and start eating it.

"Rodney," says Mercedes. "How come you're chewing on Armored Patrol?"

Midnight. We are roaring down the Ohio Turnpike. The hum of dark thoughts is in our ears. We are headed east, but sunrise is still hours away. The roadside reflectors dance like moths in the corner of my eye. Mercedes sleeps, her head on the armrest of the door. Max is in the back, quiet for once; the only spaceships he battles are the headlights in the westbound lane.

We are on the road again. How we managed isn't important; suffice it to say that we reached the end of a fantasy, and there found food and fuel.

Still, the night is unsettled. It flickers like a failing screen, inhabited by video ghosts of uncertainty, inhibited only by the will of its guests. The aliens that surround us, that linger on the fringes of our glow, are patient. Only occasionally do we hear them, their laughter echoing across the bay of darkness from a causeway we cannot see.

I shudder, take another sip of coffee, and step on the gas. The van hesitates and then leaps forward, and we continue our journey on the crest of the phosphorescent wave. ■

LOAD 80 CASSETTES AND DISKS

**BACK
ISSUES**

If you have not yet ordered any Load 80
tapes or disks and wish you had, don't
worry. We are now offering a "BACK
ISSUE" inventory clearance. You can
order nearly any Load 80 starting from
September of 1982 to date. We do have
limited quantities, so order early to
avoid disappointment! Back issues of
80 Micro are also available. With com-
plete documentation found in the com-
panion magazine, you should have no
difficulty loading any of the programs
listed on Load 80.

Please send the following:

LOAD 80 attn: Debbie Walsh • Pine Street • Peterborough, NH 03458

Send any questions or problems dealing with any area of TRS-80 microcomputing to Feedback Loop, 80 Micro, 80 Pine St., Peterborough, NH 03458.

I own a Model I and I would like to speed up the Z80 clock. Many articles in 80 Micro offer speed-up kits boasting increases of up to 150 percent. The circuits shown have a bunch of flip-flops and logic gates. My question is: If the Z80 operates at 4 MHz, why hasn't anyone come up with the idea to exchange the crystal in the clock circuit for a 4 MHz crystal? Also, why did Tandy decide to have the TRS-80 operate at 1.77 MHz instead of the top speed of 4 MHz?

J.L.
Lowell, MA

The reason RS doesn't replace the present crystal with a 4 MHz crystal is because the present crystal has a 10.6445 MHz frequency. The logic gates and flip-flops are used to divide this 10 MHz frequency down to the desired frequency. The chips in the TRS-80 can't be used without extensive modifications to the circuit board, so most speed-up kits use their own divider networks to do this.

Tandy didn't design the TRS-80 for 4 MHz operation because it's expensive. Consider that you'd have to use 200-nanosecond RAM chips to operate at that frequency, which are more expensive than the 300-nanosecond chips originally used. Also consider that the other chips in the computer would have to be upgraded to higher quality, and higher priced, chips before the full speed could be achieved. In fact, several of the speed-up kits warn you that in order to reach the higher speeds it may require replacing several key chips with ones of higher quality (such as replacing the Z80A chip with a Z80B).

Designing the TRS-80 to operate at 4 MHz would have increased the production cost as much as 20-50 percent. Since the designers were interested in making it as inexpensive as possible, they decided to use the cheaper chips and a slower clock rate. The machine was originally designed for the home hobbyist and not the business or scientific community, so the slower speed doesn't matter. After all, in most cases the TRS-80 is waiting for people, printers, modems, and other slower devices

Problems and solutions

to do their stuff before it can proceed with its job.

At present I own 10 of Scott Adams' 12 adventures, loaded from tape to disk. I did this by using Jake Commander's Macro Monitor and copying the programs from 8000H-BCFFH and adding a loader at BCFFH to BD0F to load it over the overlay region after being put in memory by the DOS.

I've tried many times, unsuccessfully, to replace the cassette save and load routines with disk save and load routines and relocating the programs to 7000H-ACFF so that the DOS isn't destroyed. Do you know of a patch that can do this?

C.J.
Monaca, PA

I remember trying to do that myself several years ago. Unfortunately, I couldn't get it to work for me either. I suggest that you contact Adventure International and ask about trading in your cassette programs for disk programs.

I own a Model III and would like to use the Superzap utility to change some files and to transfer Model I programs. Would you please suggest some books that define in detail the Model III disk structure? Books such as TRS-80 Disk and Other Mysteries appear to be written for the Model I.

L.S.
Maple Glen, PA

The IJG book (IJG Inc., 1953 West 11th St., Upland, CA 91786) was written before there was a Model III on the market. Fortunately, most of the information about the directory in *TRS-80 Disk and Other Mysteries* also applies to the Model III, although there are differences. *The Alternate Source* had an article in issue 12 (Vol. II, No. 6) entitled "Reconstructing Model III TRSDOS Directory Entries" that details the differences between the Model I and Model III directories. The single issue is no longer available, but you can buy it bound with issues 7 to 12 in TAS Volume II for \$19.95.

Additional information on the general structure of Model III files can be found in an article entitled "Supercop" in issue 11 which is also included in the TAS Volume II.

I have two TRS-80 systems: System A is a 48K Model I with a single-density, single-sided 40-track drive, and system B is a 32K Model I with a single-density, single-sided 35-track disk drive.

For some reason, system B won't go to Basic. When I type Basic in at the DOS Ready prompt, Basic appears for a few seconds, and then either reboots or locks up. I've tried two 40-track DOSes and one 35-track DOS. Basic is stored on tracks below track 35, so the lack of the upper five tracks shouldn't cause any problems. What makes this confusing is that all my machine-language programs load properly.

I don't suspect the keyboard and interface because when I switch disk drives to the 40-track drive from the other system, Basic loads just fine. The Radio Shack repairman insists that nothing is wrong with the 35-track drive. What could be the problem?

R.G.
North Hollywood, CA

The first thing that occurs to me is: What stepping speed are you using with your DOSes? The 35-track drives sold by Radio Shack can't step as rapidly from track to track as most of the 40-track drives on the market.

I once had a similar problem with a friend's computer. My disk wouldn't go into Basic on his system, but worked fine with mine. I finally realized that my

FEEDBACK LOOP

DOS was using a track-to-track stepping time of 3 milliseconds, but his drives were slower and required a stepping speed of 12 ms. When my DOS was on his computer, it kept expecting data back from the drive before the drive could get it to the DOS. The result: Data Lost, Track not Found, and similar error messages. When I increased my DOS's stepping rate to 12 ms, the problem disappeared completely. Try this and let me know if it works.

I own an early TRS-80 Model I, Level II computer which won't execute the USR command. I've been told that this isn't an isolated incident. Does anyone have a way around this problem?

T.M.
Rural Hall, NC

I checked with my technical friends and none of them have ever heard of any problems with the USR function not working. The FC error means that the address you've given for the location of the machine-language routines location isn't where the machine-language routine is really located. You've either miscalculated the routine location (hexadecimal to decimal conversion error) or you haven't given the right Memory Size to protect the routine from Basic.

First, make sure that you're not using the Disk Basic command DEFUSR to tell Basic the location of your routine. It won't work in Level II Basic.

Second, make sure that you haven't reversed the numbers in the USR address. 16526 must contain the least significant byte (LSB) of the machine-language routine's address, and 16527

must contain the most significant byte (MSB) of the address. They must be POKEd into memory in that order.

And last, make sure your math conversion routines are giving you the correct addresses. If you have the decimal address, divide it by 256 to get the decimal value of the MSB. Throw away the portion that's to the right of the decimal place, and then convert that number to hexadecimal using the table in your Level II manual. Subtract the decimal MSB (multiplied by 256, of course) from the decimal address of the routine to get the decimal value of the LSB, and then look up the hexadecimal value. Now that you have the values in hexadecimal, work them backwards to get the decimal address you started with. Any difference means you've made an error and need to double check your math.

If you're interested, type in Program Listing 1. It's a simple, quick, and dirty program for converting from decimal to hexadecimal and back again. Not very structured or elegant, but it'll do the job.

I have a Model I, 48K, three-disk drive system with double-density, lowercase modifications, and a Line Printer VII. I have a few problems that I can't seem to get anyone to answer.

First, when I run the RS MEMTEST, ROM A should return AE5D or AE60. Mine returns B078. ROM B should be either DA84 or DA45; mine is DA45. And ROM C should return 4002, 40BA, 3E3E, or 40ED. Mine returns 4006. Everything seems to be OK, but are these numbers correct?

Second, I can't get the 48K versions of Basic Programming Assistant by Instant Software and Packer by Cottage Software to load and run with TRSDOS 2.77D. When it loads, it checks to see if the lowercase modification is installed. If it is, it loads the lowercase driver, which apparently clobbers these programs. I don't know how to relocate, so do you know of a utility program that will help?

O.L.
North Little Rock, AR

Your first problem is that you're using an old version of the RS MEMTEST program. The values you

THE SELECTRIC™ INTERFACE

Daisy wheel quality without daisy wheel expense.

You need the quality print that a daisy wheel printer provides but the thought of buying one makes your wallet wilt. *The Selectric™ Interface*, a step-by-step guide to interfacing an IBM Selectric I/O Writer to your microcomputer, will give you that quality at a fraction of the price. George Young, co-author of *Microcomputing* magazine's popular "Kilobaud Klassroom" series, offers a low-cost alternative to buying a daisy wheel printer.

The Selectric™ Interface includes:

- step-by-step instructions
- tips on purchasing a used Selectric™
- information on various Selectric™ models, including the 2740, 2980, and Dura 1041
- driver software for Z80, 8080, and 6502 chips
- tips on interfacing techniques

With *The Selectric Interface* and some background in electronics, you can have a high-quality, low-cost, letter-quality printer. Petals not included.

\$100 VALUE

A new low cost internal disk kit is available to expand your storage capability. With this kit, you may expand your 16K TRS-80® Mod III computer. Includes: 1-MTI 40 track, double density disk drive, power supply, controller, cables and DOS PLUS operating system.

ADD-ON WINCHESTERS

Add 5, or 11, megabyte hard disk drive to any Model III. The complete self contained unit includes a Winchester drive, controller, power supply cooling system and cables in an attractive enclosure.

From \$1799

Special-Includes DOS + 4.0

CP/M 64K

The Mod III Plus CX 140 system is an exciting new personal end small business computer that is both CPM & TRS-DOS compatible.

- 80 x 24 Display for CP/M
- 64K Bytes RAM Memory
- Microsoft BASIC language in ROM
- Internal Z80 ROM Diagnostic
- Z80 processor, 2MHz
- 4MHz speed up option
- 64 x 16 screen
- Parallel printer interface included
- 2 Internal 40tk Disk Drives

**Priced From
\$2395 —**

MOD III PLUS 140H/240H

Computer consists of 48K bytes memory and a double density, dual disk drive system. The system is fully compatible with the Radio Shack® DOS and peripherals. Get 178,000 bytes of memory storage per disk. Includes DOS PLUS 3.3. The 240H has double headed 40 track drives.

**PRICES FROM
\$1595**

**OFFERED AT THIS PRICE
FOR A LIMITED TIME**

MTI DOES IT. Our CP/M 64K turns your TRS-80 Model III into two computer systems, with memory upgrade to 64K and an 80" x 24" column video card, you will convert your computer to a CP/M base machine.

LIKE THE BIG BODYS. That means you can access the single largest body of microcomputer software used by companies like Xerox, Osborne, Eagle, etc. What is better, is that you can switch back and forth between TRS-DOS and CP/M modes, and our own Z-80 monitor.

EASY INSTALLATION. The CP/M 64K system plugs directly into the TRS-80 CPU board.

HUNDREDS OF APPLICATIONS. You have available literally hundreds of programs written for many mini and micro computers under CP/M.

Continued from p. 346

get are the correct ones for the revision A ROM, which powers up with Mem Size? instead of Memory Size?.

Your other problem is much more difficult. There isn't an easy way to relocate machine-language programs from one place to another, unless they've specifically been written to be relocatable. Some machine-language programs, when you load them, check to see what the highest available memory position is, taking care to respect `HIGH$` (the DOS equivalent of a Memory Size). Usually these programs are loaded last. Unfortunately, neither of your two programs falls into this category.

Is there anyone who has a modified version of these programs that'll work with TRSDOS 2.77's lowercase driver installed?

I have an unmodified Model I with two disk drives and an Epson MX-80 printer. Before buying Electric Pencil, I called IJG and asked if it supports lowercase on an unmodified Model I. They said that it would, except that lowercase wouldn't be displayed on the screen. If I hit shift zero, a different set of characters is displayed on the screen. Lowercase prints on the printer, but how can you write in this manner? I wrote to IJG, but haven't received an answer.

The Pencil manual states on page one that I must make the lowercase modification to take full advantage of Pencil (direct contradiction of what I was told). The manual also states that there's a coupon at the back of the book for a Teknopak kit I can install. No coupon at the back of the book. Strike two!

I looked up some back issues of 80 Micro, and installed the lowercase modification written by Dennis Kitz in the December 1981 issue on p. 46. I made the modification as per his instructions, but it doesn't work: no lowercase displayed, strange symbols on the video, and lowercase to the printer. In addition, I now find that some graphics displays are messed up. Should the modification I made print lowercase on the screen when driven by Pencil? And if not, is there one that will? Also, how can I reach Teknopak?

D.N.
Valparaiso, IN

Teknopak no longer sells the kit, but Progressive Electronics (537 E. Main St., Lancaster, OH 43130, 614-687-1019) is selling two versions of their kit. For those of you who've already made the modification but don't like the printed characters, you can buy the character generator chip alone for \$18.95. It displays true upper/lowercase characters with proper descenders and no displaced letters.

For those who want the entire kit, it's available for \$21.95 and contains the 2102 RAM chip, character generator chip, wire, and instructions for making the modification. The method Progressive uses is similar to the one used by Radio Shack: they jumper two wires, add the 2102 RAM to the video memory, and make one trace cut on the circuit board.

I talked with Dennis about the December issue modification. He has that modification in his own system, and uses Electric Pencil 2.0 as his word processor. He suggests that you carefully compare your work with the article instructions and check for solder bridges or cold solder joints that might not be connecting the wires properly.

I'd like to add a hex keypad, but the keyboard PCB already has the additional 12 key sockets wired in place which limits me to those 12 keys only. Do you have the part numbers for the switch set, caps set, and possibly the bezel?

My keyboard came from the factory with the following VCG chip installed in socket Z29: #SCM 37530 (AXX3027 or #8046673). From what I've read, this is the necessary character chip for the upper/lowercase modification. Is this right?

I'm also looking for a business program that's written specifically for an over-the-road trucker's accounting end of the business.

L.B.C.
Toledo, OH

Yes, you can buy the parts from National Parts (900 East Northside Drive, Fort Worth, TX 76102, 817-870-5662). The keyswitches (AS0992) cost \$1.04 each, as do the keycaps. When ordering, tell the operator if the keyswitch is for the ALPS or Hitex keyboard (Hitex

was the original keyboard, ALPS is the newer bounceless keyboard). There is no generic part number for the keycaps, you'll have to tell the operator the character you want. Installing all 12 switches costs you about \$24 plus your time and labor.

What might be easier and cheaper in the long run would be to buy a 19-key Hex keypad (#K-19) from Jameco Electronics (1355 Shoreway Road, Belmont, CA 94002, 415-592-8097, \$14.95), and install the keypad in parallel with your keyboard (see 80 Micro, 80 Applications, September 1980, or *The Custom TRS-80* from IJG for details on this).

As far as my sources indicate, you have the correct chip. All you need to do is install the upper/lowercase modification and you'll be in business. See the previous letter for details.

Can anyone help L.B.C. with his business program need?

I have a cassette-based, 16K Model I Level II with RS lowercase modification, 16K Expansion Interface with buffered cable and a Line Printer VII.

When I turn the system on and start keying in a program, I sometimes notice that the text starts swaying back and forth, starting at the bottom and working its way to the top. At times it's mild, but other times the letters move over an entire position.

Is the problem with the video display or the video divider chain? I've also noticed that the video plug socket is loose, not the solder joints but the part that holds the pins from the DIN plug.

S.M.
Port Richey, FL

Your problem is caused by RFI from another source, not your computer. There's no real cure, unless you build a faraday cage around your computer (see the May 1983 column for more information). RFI is most commonly caused by light dimmers, fluorescent lights, neon lights, fading LEDs, and even motors (furnace, refrigerator, etc.) that are slightly out of specification.

The easiest way to track the RFI source down is to wait for it to manifest itself, then start turning off everything in the house. If you live in an apartment building, the trouble could be from someone else's faulty equipment. One

last word: your LPVII and keyboard both use an LED, but in these cases the trouble is almost always evident.

I've been doing a lot of work with the directory program of the TRS-80. I've found out how the password for a program is generated, but I would like to have a routine to decode the passwords. Can you help?

C.D.
Towson, MD

You don't say which computer system you're using. If it's a Model I, you're in luck: Instant Software (Peterborough, NH 03458, 603-924-9471) has a package called Disk Scope (#139) for the Model I disk-based computer containing a program that decodes the directory password for any program. It retails for \$24.95.

I don't know of any package that operates like that for the Model III. Can anyone help with a Model III directory password decoder?

I'm using my double-disk-drive Model III with a Daisy Wheel II printer for word processing, using Scripsit with Acorn's Superscript patch. To earn additional income, I'd like to get into electronic typesetting. Is there software that inserts Compugraphic typesetting codes into my files? Do you know of any printers in New York City willing to accept ASCII files via modem, and then insert their own printing codes?

I'd also like to know if there's software available that will permit Model III users to communicate with the Westlaw data base. Westlaw tells me that they'll serve only Model II users. I understand there are compactors that'll give me 80 characters on my screen. If so, will this permit me to use Westlaw?

L.K.
New York, NY

Yes, you can use the Model III to send ASCII files to typesetting services. There're two ways that this can be done. The first works with almost any word processor, but depends on the typesetting service's computer for success. When you contact the service, they'll supply you with a chart of control codes

that are simple character combinations (i.e., *B means boldface, *L means underline, etc.). You create your file just as you always do, using these codes in place of your word processor's print formatting codes. When the file is completed, save it in ASCII form and load a communications program. Then send the ASCII file to the typesetting service over the modem. As the file arrives at their computer, the computer uses a substitution table to replace the ASCII letter codes in your file with their corresponding typesetting control codes.

The other method requires a word processor, such as SuperScript, NewScript or LazyWriter, that can control codes in your file. When you contact the typesetting service, they'll give you a chart of typesetting codes used with their equipment. As you write your file, you put these codes directly into your file. When you're finished, save the file in ASCII format, load a communication program, and send the file to the service. When they receive it, they store it in their machines and print it out. Their equipment doesn't alter your file in any way.

Right off, I don't know of any companies in New York that offer this service, but more and more companies are joining this bandwagon so check the telephone book and make a few phone calls.

Finally, the "compactors," as you call them, are actually hardware boards that allow the video to display 80 characters by 24 lines. To use this capability, you must have the appropriate software to drive the hardware. TRSDOS and Basic can't do it. Most of these hardware boards are supplied with CP/M, which uses an 80 by 24 display and 64K of RAM. If you were to convert your Model III to CP/M capability, you should be able to use the Westlaw data base without difficulty since it won't recognize whether you're using a Model III or a Model II.

I purchased a 16K cassette-based Model III in August. Due to a lack of funds, I can't afford to upgrade to a disk system but I would like to go to 48K of memory. I don't want to send the machine out for a week, so please tell me how to do it myself.

K.V.
Mahopac, NY

It's no problem at all. You want to use 4116 RAM chips: the 200 nanosecond is fine, the 150 ns even better, and the 100 ns is best. Prices range from \$12.95 for a set of eight from mail order firms to almost \$32 if you buy them from Radio Shack (Radio Shack uses 250 ns memory). No other parts are needed.

Installing the chips is simple: unplug your computer and carefully remove the cover of your Model III (unscrew all the screws and lift the top off to the side). Locate the two rows of eight empty sockets on the circuit board. If you examine the board beneath the 16 empty sockets, you'll see that there are silk-screened outlines of the DIP packages. One end of each outline is marked with a notch. When you plug the memory chips in place, make sure that the notched end of each RAM chip lines up with the notch silk-screened on the circuit board. Be careful that you don't bend or fold any chip legs between the chip and the socket when you push each chip in place. The legs should position directly over the socket holes. If they're too far apart, gently roll the chip on a table top and bend the legs closer together. If they're too close together, gently pry them apart with a popsicle stick (avoid metal contact). If you're unsure of your abilities, get the Radio Shack inserter/extractor tool set (#276-1574, \$6.95).

After installing the chips, inspect the chips and sockets closely. Check for bent chip legs and chips that are reversed in direction from the other chips. As a general rule, all chips on a circuit board are oriented the same way (notches all facing the same direction). Notes of caution: Opening your computer case voids your 90-day warranty. DO NOT touch the legs of the RAM chips with your fingers. Handle them by their ends only!

Put the case back together (don't put the screws in yet), plug in your computer and turn it on. In response to the message PRINT MEM, you should get something on the order of 48K. If you don't, check the memory chips. It's possible, but unlikely, that a chip is bad the first time you use it. When you get the 48K installed, run an all-night memory test program on the machine. If you're going to have memory problems, 90 percent of them will show up in the first 48 hours.

WAYNE GREEN BOOKS

KILOBAUD CLASSROOM

by George Young and Peter Stark

Makes learning electronics fun and easy. First published as a series in *Kilobaud Microcomputing*, the book combines the learning of essential theory with practical, hands-on experience. The course begins with basic electronic projects and culminates in the construction of your own programmable microcomputer. The direct instructional methods of authors Young & Stark make KILBAUD CLASSROOM a simple way for you to acquire a solid background in digital electronics.

BK7386 (419 pages).....\$14.95

THE SELECTRIC INTERFACE by George Young

You need the quality print that a daisy wheel printer provides but the thought of buying one makes your wallet wilt. The SELECTRIC™ INTERFACE, a step-by-step guide to interfacing an IBM Selectric I/O Writer to your microcomputer, will give you that quality at a fraction of the price. George Young, co-author of *Kilobaud Microcomputing* magazine's popular "Kilobaud Classroom" series, offers a low-cost alternative to buying a daisy wheel printer. The SELECTRIC INTERFACE includes: step-by-step instructions, tips on purchasing a used Selectric, information on various Selectric models, including the 2740, 2980, and Dmra 1041, driver software for Z80, 8080, and 6502 chips, tips on interfacing techniques. With The SELECTRIC INTERFACE and some background in electronics, you can have a high-quality, low-cost, letter-quality printer. Petals not included.

TEXTEDIT

A Complete Word Processing System in Kit Form

by Irwin Rappaport

TEXTEDIT is an inexpensive word processor that can be adapted to suit your differing needs—from form letters to lengthy texts. Written in TRS-80 Disk BASIC, the system consists of several modules, permitting the loading and use of only those portions needed. A disk is also available which provides the direct loading of the modules, however, the book is required for documentation. For Model I and III with TRSDOS CONVERT, one disk drive (2 disk drives or copy utility needed to transfer to system disk). Runs under TRSDOS 2.2/2.3. May not function under other systems.

My Model I works only at one's own risk. It's subject to disk reboots and syntax errors (which aren't there when the line is listed). The cable connectors have been cleaned.

I also have the same problem as D.S. of Austin, TX (February 1983, p. 406): My cassette tapes won't load. What do you suggest?

W.C.
Cary, NC

You don't mention the age of your computer or its Expansion Interface, so it's possible that your Expansion Interface is an earlier model that needs the buffered cable fixed or the MUX modification, or both. Both the reboot problem and the spurious syntax error result from the keyboard-to-Expansion Interface interface problem. Cleaning the contacts is the first step. If that fails, try lightly sanding the contacts with emery paper (unplug your computer, sand it, and then carefully and thoroughly clean the contacts after sanding). Check for a

tight fit on the cable when you're finished. If the connector is loose, you might have to add solder to the circuit board edge connectors by lightly resoldering them.

Now test the computer. Set a disk program in memory and, while it's running, wriggle the keyboard/Expansion Interface connector several times. If you still get reboots or syntax errors, get Gold-Plug 80 connectors to replace the tin-lead edge connectors you now have (EAP Company, Box 14, Keller, TX 76248, 817-498-4242, \$18.95 for the CPU/EI set of gold connectors).

If you have a tight fit on the connector, and the contacts have been thoroughly cleaned (and sanded if needed), the next choice is to check your RAM for defective bits. Several memory tests have been published in this magazine and many more are available on the market.

If you are still unsuccessful, take the computer to the RS computer center for a check. Explain the problem, tell the technician all that you have done to the

computer and have him run his diagnostic programs.

I just purchased an LNW system expansion interface. When connected to my TRS-80 it shorts out the CPU power supply. On my friend's newer TRS-80 I found pin 37 and pin 39 to be ground on the keyboard expansion port. On my computer, pin 37 is ground and pin 39 is +5V. I tried cutting the trace on pin 39 and putting a jumper in to make it ground, but now I get @ on the screen and no boot.

A.C.
Eulless, TX

Your problem is the jumper. The trace to pin 39 has to be cut. Remove at least 1/8 inch of the trace to prevent problems. Remove the jumper, too, as it's not needed. Next, carefully check the CPU board-to-keyboard cable. It's possible, if you took apart your computer to cut the trace, that you also

**Computer
Case

pulled loose a connector to the key-board. When this cable fouls up, all kinds of strange problems result, including no disk drive response, spurious resets, memory changes, and other equally weird behavior.

If you intend to modify your computer more than once or twice, do what the RS technicians do: buy an extra CPU to EI cable (non-buffered), cut slots in the sides of the connectors deep enough to allow the connectors to fit over the edge of the CPU circuit board, remove the keyboard/CPU cable, and use your modified CPU/EI cable to connect the keyboard to the CPU. The circuit pin spacing is just right to match the cable. The next time you take apart your computer, unplug the keyboard from the CPU. It takes most of the worry out of working on the CPU board.

It seems EPSET won't work with LDOS, although it does work with TRSDOS, MULTIDOS, NEWDOS, and DOSPLUS. I'm a confirmed

LDOS user and therefore EPSET turned out to be a waste of money. Win some, lose some.

80 Micro reviewed the Doughflo program (February 1983, p. 64), and according to the article, Alphabetic is going to make the program available without backup protection. I'm going to see if I can return my original disk for "unlocking." I still think the Doughflo program is great, I just can't chance using it without being able to back it up.

E.S.
York, ME

As you said, win some, lose some.

I enjoy your column very much and I want to thank you for your kind words about my program Floppy Doctor. There are, however, a couple of things regarding the program you should be aware of.

There're two distinct versions, one for the Model I (\$24.95) and one for the Model III (\$29.95). The Model III ver-

sion is more expensive because it has enhanced capabilities including hard copy error reports and a formatting test, among other things. The Model I version won't work on Radio Shack's double-density adapter, but it is compatible with Percom-like doublers. There are two separate programs supplied on each disk: the disk-test program and the RAM test program. Neither version works on any other computer, nor will either work on anything other than 5¼-inch drives. However, I believe they're the most inexpensive and comprehensive diagnostics available for the Model I and III computers.

One last thing: I no longer handle direct sales of the programs. Please contact either Apparat (4401 S. Tamarac Parkway, Denver, CO 80237, 303-741-1778) or Meta Technologies (26111 Brush Ave., Euclid, OH 44132, 800-321-3552, 216-289-7500).

Anyone who needs a comprehensive disk/RAM diagnostic package for their Model I or Model III computer, I suggest that you get The Floppy Doctor. You won't regret it.

I'm writing in response to N.K.'s letter in the December 1982 Feedback Loop (p. 440). She was interested in audio output from a Model I for word processing for a blind person. A unit that'll get her started is the Microvox, available as a kit from MicroMint (917 Midway, Woodmere, NY 11598, \$215 plus \$4 shipping). The unit is available ready-to-go for \$295 (plus \$4) as the Intex-talker from Intex Micro Systems (Suite 1717, 755 West Big Beaver Road, Troy, MI 48084). The unit is described in detail in the September and October 1982 issues of Byte.

The unit has both serial and parallel outputs. I haven't used the serial output, but the parallel output works fine. Just unplug the printer from its cable to the TRS-80 and attach the Microvox in-

stead. Anything sent to the printer port is now either spoken or spelled. This includes word processor outputs, LPRINTS, LLISTS, and so forth. N.K. must be prepared for some difficulty with the accent. It takes about an hour to get the hang of it (it's as rough as a strong West Indian accent). Nevertheless, it does read your material back to you, and has a good go at telling you what errors have been made, if you can get them to print. I use NEWDOS80, so a quick JKL will make the screen contents audible at any time.

For sighted users, Microvox isn't fast enough to be used for proofreading and the incomplete intonation control is tiring, but at \$295 it's a bargain and should certainly help N.K.

Incidentally, if N.K. can get hold of a speech recognizer, such as the Cognivox from Voicetek (\$149), she could arrange it so that certain commands from her would cause the computer to reply. This might be handy to find out whether the system is working or not. On my sys-

tem, calling Fred gets the response Yes?, and Help starts an emergency phone dialing procedure, with a spoken commentary on what's happening for reassurance. The Microvox output is good enough to read prerecorded messages into a telephone.

Finally, N.K. should be aware of the information put out by the Trace Center for the Severely Handicapped at the University of Wisconsin, Madison. They have all kinds of information on computer programs and hardware for the handicapped. They are intended for home construction and use, and are fairly priced. Communication Outlook is another excellent source and is published by the Artificial Language Laboratory, Computer Science Dept., Michigan State University, East Lansing, MI 48824.

M.B.
Pierrefonds, Quebec

Thanks for the good advice and information.

If you own Super Utility Plus² you need Super Duper!

- Enter SU+ with the top 8K of memory unaltered! Pass data back and forth between SU+ and other programs. Load a high memory monitor and jump to it after SU+ loads!
- Keep a SU+ backup on your system disk—always ready when you need it!
- Load or Run machine language programs, exit to DOS READY without re-boot, or save a SU+ backup copy! All from inside SU+!
- NO machine language knowledge required! Super Duper does all the work!

Duplicate SU+² in STANDARD/CMD format. No need for expensive backup disks!

- Super Duper works with the Model I or III, any TRSDOS³ compatible DOS and requires Super Utility Plus V2.2z or V2.2P... \$29.95.

Dealer Inquiries Welcome

✓417

I upgraded my Model I to include the RS double-density board and TRSDOS. I'm pleased with the increased disk storage capacity and the additional commands available, but there are three irritants in TRSDOS with which I'd like your help.

● How can I modify the boot program to go directly to the TRSDOS Ready prompt instead of having to answer the Date and Time prompts first?

● How can I modify Debug to allow it to display memory below 5400H?

● How can I modify the Copy command so that it copies single-density to double-density with a one-drive system?

D.C.V.
Scott AFB, IL

I'm sorry, but I don't know the patches that do what you want, especially the modification to the Copy command. I fear that that patch is very difficult.

What you should do, if you can af-

ford it, is to buy another DOS that has the capabilities you want. I know that MULTIDOS, NEWDOS80 and DOSPLUS will let you use the Radio Shack doubler, and they don't have the drawbacks you complained about. But this is a rather radical solution to your problem.

Does anyone have the patches to double-density TRSDOS that D.C.V. wants?

The advent of the TRS-80 Model 16 and other 16-bit computers makes number-crunching (i.e., the execution of large-scale engineering programs and partial differential equation formulations) on microcomputers cost-competitive with minicomputers; but only if floating-point hardware co-processors are readily available and integrated into existing 16-bit microcomputer designs.

Inquiries to Tandy relative to this application haven't produced any useful response. I'm curious to know if a floating-point hardware option is likely for

the Model 16 and if it's already available on other 68000-based microcomputers. Number-crunching micros will revolutionize heavy scientific computing to the extent that mainframe computer manufacturers should be worried.

C.A.J.F.
New South Wales, Sydney, Australia

As far as I know, there isn't a floating-point co-processor board for the Model 16, although I've heard rumors that the boards are being developed for the 68000. Mainframe manufacturers are worried about microcomputers. Why else do you think IBM introduced a personal computer and DEC is opening retail stores all over the place? ■

Terry Kepner is a freelance writer and programmer, and the vice president of Interpro. He's been writing about microcomputers since 1979.

Surface Plot

The Grafyx Solution® with Depth

Outstanding Grafyx. SURFACE PLOT lets you broaden your imagination by creating amazing three-dimensional views with Grafyx Solution. Micro-Labs' Grafyx Solution is a plug-in, clip-on board which gives you 98,304 points in a 512 x 192 matrix. That's sixteen times as many points as a standard Model III! Another unique feature is the ability to display the hi-res screen along with the normal text and low-res screen.

Flexible Grafyx. SURFACE PLOT allows you to enter an equation of the form $Z=F(X,Y)$ where Z is the height above the surface for a given X, Y coordinate. For example, entering the equation $Z=10-X^2$ draws a hill. The final picture can be viewed from any position in space so you can see an image from underneath, above, or even inside a hill or valley on the plot surface. You can also specify the size of the resulting image.

Complete Grafyx. The program automatically removes hidden lines for

best results. The documentation contains complete instructions and sample equations so that you will have your computer hard at work without delay. The finished plot can be saved on disk or printed on any of 20 popular printers.

The Grafyx Solution package is shipped from stock and includes the board, 44 programs including an 80-Column display driver and Extended Graphics Basic, and a 54 page manual all for \$299.95. The SURFACE PLOT program, twelve hi-res pictures, and manual is \$39.95. Shipping is FREE on pre-paid or COD orders. (Tx. residents add 5% sales tax.)

Newbasic

Newbasic 2.0 is an enhancement that adds up to 40 commands to Model I/III Disk Basic.

Over 10 graphics commands combine the speed of Assembly language with the ease of Basic, even for animation. Additional commands handle sound generation, RS-232 initialization and input/output, definable keys, line labeling, string execution, using a Do/Until loop, and more.

The Newbasic disk is \$39.95 from Modular Software Associates, 209 18th St., Huntington Beach, CA 92648, 714-960-6668.

Upgraded Dot-Matrix

An enhanced version of Okidata's Microline 84 dot-matrix printer is now available. The Step 2 printer offers 200-cps bidirectional printing and a 50-cps correspondence mode with proportional spacing.

In addition, the unit is fully compatible with VisiCalc, WordStar, and other popular software packages, accepting them in correspondence mode with no modifications. Other improvements include select/deselect control, a Spanish character set, and

forward-feed super- and sub-script printing.

A Super Speed RS-232C interface provides switch-selectable transmission speeds of up to 19.2K baud and supports normal, correspondence, and graphics print data. Monitor and self-test modes provide diagnostic capabilities.

The Step 2 Microline 84 sells for \$1,495 (serial interface) or \$1,395 (parallel) from Okidata Corp., 111 Gaither Drive, Mt. Laurel, NJ 08054, 609-235-2600.

Reader Service ✓571

Screen Expander

The Screen Expander gives the 64K Color Computer a 51-by-24-character upper- and lowercase display for word processing, Extended Basic, and Assembly programs that use text displays. It includes an easy-to-use character editor and a PRINT@ command enhancement.

The program transfers ROMs to RAM and modifies them to use its high-resolution display. It does not affect any software, and is maintained even after resetting.

Price is \$24.95 (cassette) or \$29.95 (disk), plus \$2 shipping and handling, from Computerware, Box 668,

4403 Manchester Ave., Encinitas, CA 92024, 619-436-3512.

L-Monitor

The L-Monitor is a tape-loading aid for the Model I that assures first-time program loads and precisely monitors program saves. It is attached between your micro and cassette recorder using standard 1/8-inch connectors (included), and is adjustable for individual computers.

An output for earphone, amplifier, or tape duplication is provided; instructions cover normal use of the L-Monitor as well as tips on tape head alignment and tonal balance.

An assembled and tested unit is \$23.50, and a kit \$17.50, from L-Monitor, 819 Kenyon Lane, Newark, DE 19711.

Reader Service ✓569

II/16 Telex Software

The SmarTelex package lets 64K Models II and 16 communicate with any telex terminal in the world. Its menu includes international (50 baud) and domestic telex, as well as the Easylink mailbox service and Autosafe store-and-forward.

Transtector SL

SmarTelex uses your word-processing program to create, delete, and edit messages. Telex utilities list all messages sent, to be sent, or received (with date and time). Other programs, such as a spreadsheet or accounting system, can be added to the main menu for no-reboot convenience.

The price is \$449.95 from Cappcomm Software Inc., 1 World Trade Center, Suite 1453, New York, NY 10048, 212-938-5702.

Employee Scheduling Software

Sched:Planner is a Model III program that automates the process of creating and assigning weekly work schedules for large organizations. It also provides "what-if" analysis and forecasts alternate schedules, and can be used without computer experience.

The program handles up to 1,800 employees and up to nine separate schedules. Updating a weekly schedule for a worker takes less than a minute, with arrow keys and arcade-style graphics eliminating most typing. A composite schedule, automatically printed for each day of the week, displays a time line for each employee, showing when and at what assignment he or she will work.

Sched:Planner costs \$750;

The Australian Crawl

The Tasman Turtle, a programmable robot beneath a clear plastic shell, has crossed to America after wheeling around Australia since 1980.

Directed by any micro-computer with a parallel or RS-232 interface, the Turtle moves and turns, toots its horn, blinks its eyes, draws with a pen, and "feels" through touch sensors. A talking Turtle, with a vocabulary of 150 words (expandable to over 600) and a Yankee accent, is available at extra cost.

Prices start at \$999.95 from Harvard Associates Inc., 260 Beacon St., Somerville, MA 02143, 617-492-0660.

Help for LDOS

Users new to the LDOS operating system find that it lacks one important feature—

DOES STRING COMPRESSION HAVE YOU TIED UP IN KNOTS?

LET TRASHMAN CLEAN UP THE MESS!

TRASHMAN is a machine language utility for the TRS-80 Models I and III. It was written by Glenn Tesler, the author of FASTER, and can reduce BASIC's string compression time by 95% (see table below).

WHAT'S STRING COMPRESSION?

When a BASIC program changes a string (words, names, descriptions), it moves it to a new place in memory, and leaves a hole in the old place. Eventually, all available memory gets used up and BASIC has to push the strings together to free up some space. This takes time. Lots of time. The computer stops running for seconds or minutes, and you may even think it's "crashed". The keyboard won't work, and until all the strings have been collected, you just have to sit and wait. Then things run for a while, until string compression is needed again. And again.

If you're using your computer for business, that wastes your money. If you're using it personally, it wastes your time.

WHAT'S THE SOLUTION?

As soon as you start using TRASHMAN, those delays almost disappear. It uses less than 600 bytes of memory, plus 2 bytes for each active string. It works with other machine language programs and with all major operating systems. It's easy to use, comes with complete instructions, and can be copied to your own disks.

WHAT'S THE CATCH?

If a BASIC program uses only a few strings, very little time is wasted in string compression, and TRASHMAN won't be helpful. But, if hundreds of strings, including large string arrays, are used, TRASHMAN is just what you need.

**TRASHMAN is available on disk
for just \$39.95.**

ATTENTION SOFTWARE PUBLISHERS:

Trashman may be licensed for use with your packages. Call for details.

# STRINGS	SECONDS NORMAL	DELAY TRASHMAN	PERCENT IMPROVEMENT
250	11.8	0.7	94
500	45.8	1.6	96.5
1000	179.6	3.5	98
2000	713.2	7.8	98.9

(All timings done on TRS-80 Model I. Model III 15% faster, but pct. improvements identical. Listing of timing program available on request.)

SAVE TIME WITH FASTER

"FASTER" speeds up most TRS-80 BASIC programs by 20-30%. It's helped hundreds of satisfied people and it can help you. Detailed instructions make it easy to use. FASTER analyses your BASIC programs while they run, then displays a simple change, usually one line, that sequences program variables so the ROM will find them faster.

You can use FASTER to speed up programs you've bought, as well as programs of your own. Since it isn't a compiler, your BASIC programs can be read and changed afterwards. FASTER works on business programs, models, and games. The more complex your program, the better the results.

Does FASTER really work? Yes! Just check the reviews in *Personal Computing*, May, 1981, p. 116: "FASTER is effective and easy to use"; *80 U.S. Journal*, April, 1982, p. 106: "I recommend FASTER to everyone"; and *80 MICRO* (April, 1982, p. 40): "If you...would like a significant increase in the run-time speed, then buy FASTER."

FASTER runs on the TRS-80 Models I and III, 16-48K tape or disk, and all major operating systems.

\$29.95

"QUICK COMPRESS" takes only 276 bytes of memory, and removes the blanks and remarks from even the largest BASIC program in less than 3 seconds. It produces smaller, faster programs without altering their logic.

\$19.95

SPECIAL: FASTER and QUICK COMPRESS: \$39.95

TERMS: We accept VISA, MasterCard, checks, or even cash. Please add \$2.00 shipping/handling within U.S.A. or Canada, and \$5.00 overseas. C.O.D. charge is \$2.00 in U.S. only. We ship within one day of receiving orders.

ERRATIC DISK DRIVES?

You can avoid unnecessary disk errors and repair bills by using **RPM**. This easy-to-use program measures the rotational speed and fluctuations of your disk drives, and warns you if they are running too fast, too slow, or unevenly.

Incorrect or erratic speed is a common cause of unexplained disk errors and loss of data. RPM's documentation explains how to detect and correct these problems quickly and easily. As *80 MICRO* (April, 1982, page 41) said: "If your drives have problems I recommend RPM before paying to get it repaired."

RPM is supplied on diskette for the TRS-80 Models I and III. We suggest you order a copy before you need it.

TYPITALL

The **SCRIPSIT**™ Compatible Word Processor

TYPITALL is a new word processing program which is upward compatible with **SCRIPSIT**™ for the Model 1 and Model 3 TRS-80. If you already know how to use **SCRIPSIT**, you will be able to start using TYPITALL immediately. TYPITALL is the most advanced word processor available for the TRS-80 Model 1 and 3, and certainly the best bargain in word processors.

- Assign any sequence of key-strokes to a single control key.
- See the formatted text on the screen before printing.
- Send the formatted text to a disk file for later printing.
- Merge data from a disk file during printing.
- Send ANY control or graphic character to the printer.
- Call up HELP screens at any time.
- Move cursor by character, word, line, section or page.
- Get audible feedback from the keyboard through the cassette recorder.
- Use the same version on the Model 1 or Model 3.
- Reenter the program with all text intact if you accidentally exit without saving the text.
- Enter hard spaces to make a sequence of words indivisible.
- Change words from upper to lower case, or vice versa, without retyping.
- Change key repeat speed.
- Display cursor position, line length, document length, and free space constantly on bottom line of screen.
- Optionally ignore case of letters in string search.

Disk version only — Specify Model 1 or 3 \$129.95
Manual only (100 pages) \$25.00

SYSTEM DIAGNOSTIC

Complete diagnostic tests for every component of your TRS-80 Model 1 or 3, PMC-80 or LNW-80.

- **ROM:** checksum test.
- **RAM:** three separate tests.
- **Video Display:** character generator, video RAM, and video signal.
- **Keyboard:** every key contact tested.
- **Line printer:** character test.
- **Cassette Recorder:** read, write, verify data.
- **RS-232-C Interface:** connector fault, data transmission, framing, data loop, baud rate generator.
- **Disk Drives:** disk controller, read data, formatting, read/write/verify all sectors with or without erasing, disk drive timer, disk head cleaner.

System Diagnostic — Specify Model 1 or 3 \$99.95

TRS-80 MOD III ASSEMBLY LANGUAGE

A complete course in assembly language.

This book is written for the beginner who has some knowledge of BASIC programming and wants to understand just how the Model III works. The book explains basic concepts of the computer, the Z-80 instruction set, complete Model III ROM and RAM information, and numerous practical programming examples, complete with programs you can type in and use for different purposes. Details of the Model III's disk controller, the TRSOOS 1.3 disk operating system, and RS-232-C interface are explained in detail.

The book contains a complete listing of Monitor #5, a comprehensive machine language monitor program including a disassembler, memory displays, memory search, compare and modify commands, disk and cassette input and output commands, RS-232-C commands, and a complete debugging package including the setting and displaying of registers, setting breakpoints, and single stepping through program instructions. MON-5 is also available in a Model 1 version.

Book only \$16.95
Book and MON-5 on disk \$29.95

SMART TERMINAL

The intelligent communications program.

- **Automatic transmission** of data from memory.
- **Automatic storage** of incoming data in memory.
- True **BREAK** key.
- Character mapping, lower case on Model 1.
- Cassette and disk files compatible with **SCRIPSIT**™ and **Electric Pencil**™.
- Same program supports both cassette and disk systems.

Smart Terminal — Specify Model 1 or 3 \$74.95
Model 2 (CP/M) Version \$79.95

Add \$3.00 postage & handling. NY residents add sales tax.

Diplomat Switch Box

a Help command. The LDOS Help utility, written in machine language, provides assistance. It displays the command format, a list of parameters, and the relevant page number in the manual.

The utility can be called from LDOS Ready or from LBasic using CMD"HELP (command)". If no command is specified, a list of all the commands and utilities is displayed.

Help is available for \$19.95 plus \$1.50 shipping and handling from Vinzant and Associates, P.O. Box 174, Hobart, IN 46342 (Indiana residents add 5 percent sales tax).

Reader Service ✓567

The Diplomat

The Diplomat, an intelligent interface switch box, lets you connect four devices to your TRS-80. Possible combinations include several microcomputers accessing one printer, or one micro and a variety of peripherals, regardless of whether serial or parallel. Any input device can be connected to one or more output devices through either software or hardware switching.

Besides handling RS-232 and parallel interfaces, the Diplomat can drive a Qume or Diablo-style printer directly, as well as translate printer protocols. An intelligent 16K

RAM buffer (64K optional) divides its space among transmitting devices. Sixteen communication speeds, eight of which are switch-selectable, range from 50 to 19.2K baud.

The Diplomat measures 8.1 by 2.5 by 6.25 inches, and sells for \$595 or more (depending on memory and options). It is available from Intek Manufacturing Co., 780 Charcot Ave., San Jose, CA 95131, 408-946-9041.

Reader Service ✓558

Color Talk to Me

Color Talk to Me is a voice-recognition program that uses your cassette recorder's condenser microphone as an input port for the Color Computer. Over 200 words can be stored in a 16K machine, and the manufacturer claims recognition accuracy of 80 to 90 percent.

The two-cassette software package includes the machine-language Color Talk to Me subroutine, a Basic subroutine to merge voice input with your existing programs, and two application programs: Screen Painter, which paints the screen in one of the CoCo's nine colors when the color is spoken; and Voice Calc, which listens to spoken arithmetic problems and displays the solution.

The price is \$49.95 plus \$2 shipping and handling from

Android Attack

Android Attack is a machine-language action game for a joystick-equipped Color Computer. The player runs through an infinite number of room patterns, earning extra points for getting the crown in each room and leaving before time runs out, while firing at and dodging fire from angry androids. Further complications include ghost androids, mines, and suit protection; the game's graphics allow you to jump or duck and to fire at angles.

I/III Statistical Package

SPM (Statistical Package for Microcomputers) 2.2 is a versatile and flexible series of disk programs for the 48K Models I and III. According to the manufacturer, it supports features found in no other microcomputer statistical package, including non-linear regression, unequally sized groups for analysis of variance, and variables addition to multiple linear regression, complete with subcorrelation statistics.

The programs include descriptive statistics, one-way

frequency analysis, and XY plots, pie charts, and histograms for the printer. Two file utility programs, Edit and Filetran, provide sophisticated editing and data manipulation, such as adding, changing, or deleting variables or scores, application of up to 17 mathematical transformations nested up to 30 deep, and transferring files from one structure to another.

The SPM package is \$119.95, and individual programs are \$39.95, from A-Priori Software, 1005 W. Main St., Vermillion, SD 57069, 605-624-4214. Add \$5 for shipping and handling.

Reader Service ✓552

Clean Your Drives

Head Computer Products' disk drive cleaning kit includes two non-abrasive cleaning disks and a four-ounce bottle of cleaning solution. Running a cleaning disk in a drive for 30 seconds removes oxide deposits, smoke particles, and oil from the

drive head.

The \$7.50 kit lasts for 30 cleanings. It can be ordered from Head Computer Products Inc., 18533 Burbank Blvd., Tarzana, CA 91356, 213-342-9600.

Reader Service ✓553

Ready-Made Subroutines

Comsub is a collection of common subroutines for the 16K Model I/III Level II programmer. It serves as a skeleton of a program, to which you add applications-dependent routines, accessing the needed subroutines via GOSUB and a line number of over 1000. A five-second pause, for example, is called by setting a time variable (TM=5) and coding GOSUB 1050, which accesses Comsub's pause routine.

The package's several dozen routines include tape I/O initialization and error handling, automatic lower-case shift, printer-ready check, printer column justification, full error message printout, Break and List enable/disable, and more.

The tape version (\$10) includes two 500-baud copies of Comsub; the disk version (\$15) is in Model 1 35-track single-density format on a nonsystem disk. For more information, contact Practical Programs, 1104 Aspen Drive, Toms River, NJ 08753, 201-349-6070.

Reader Service ✓555

Cores-64

Cer-Comp (5566 Ricochet Ave., Las Vegas, NV 89110, 702-452-0632) has upgraded its Cores-9 editor/assembler package to fit 16K, 32K, or 64K Color Computers. The package leaves 3K, 19K, and over 52K of workspace on the machines respectively, and does not require a disk system.

The editor has over 25 commands, including string

search and replace, line or block move or copy, and automatic line editing. The assembler supports the full complement of the 6809 instruction set with all addressing modes, as well as standard assembler directives.

The standard Cores-9 tape is \$29.95; a Cores-64 upgrade for Cores-9 owners is \$14.95; and the enhanced Cores-64 tape is \$34.95. Add \$2.50 for shipping and handling.

Reader Service ✓556

II/16 Disk Status

The Stat utility for the Models II and 16 displays disk name, type, and free space and directory status information for disks in all four drives, with each drive shown in a separate column.

The program also checks to see that the system still uses the primary directory. This is the only way to determine whether the system has switched to the alternate directory.

The price is \$50 from Custom Software Services, P.O. Box 150, Porterville, CA 93258, 209-784-7966.

Reader Service ✓576

Two CoCo Keyboards

Two firms have introduced standard keyboards to replace what some consider the Color Computer's most serious deficiency.

Mark Data Products (24001 Alicia Parkway #226, Mission Viejo, CA 92691, 714-768-1551) offers the Super-Pro, a full-travel keyboard that retains the same layout and nomenclature as the original. The board costs \$69.95; a \$4.95 plug adapter is required for computers made after October 1982.

The WP keyboard from Spectrum Projects (93-15 86th Drive, Woodhaven, NY 11421, 212-441-2807) adds four user-definable function keys to the standard 53 keys

EXPAND

Utilities for your TRS-80* from Instant Software

SUPER>>TERMINAL

Turn your ordinary TRS-80 into a Superterminal! Integrate all your microcomputer components with this super software. **SPEED:** simplify procedures for signing-on, transmitting files, and communicating with any remote computer system. **POWER:** integrate and orchestrate all communication pathways between your terminal and all peripherals. **SIMPLICITY:** comprehensive Menus permit you to select from many options at-a-glance. **VERSATILITY:** make Special Command tables for arranging your various commands, make Control key tables for adding previously inaccessible characters, and—it is compatible with any DOS! Plus many other super features. Get speed, power, simplicity and versatility—all in one super package! Requires RS232C Interface. TRS-80 Disk Mod I & Mod III 32K 5700RD **\$95.00**

ZSIM

Debug larger, more complicated programs with this simulating, labeling debugger! Any debugger will enhance the usefulness of your assembler, but only ZSIM can make your programming tasks easier! ZSIM:
 • **RUNS** machine code instructions one-at-a-time at your bidding;
 • **EMULATES** the instruction using simulated registers;
 • **INTERRUPTS** the simulations whenever any one of a large number of user-specified conditions are met;
 • **DISPLAYS** mnemonics for each instruction, using convenient labels;
 • **LISTS** register contents and corresponding memory locations.
 ZSIM works on ROM as well as RAM since you don't need breakpoints to retain execution control (although breakpoint operation is also available). This is the best tool available to examine your code in DETAIL!
 TRS-80 Tape Mod I 16K 0376R **\$29.95**

ASSEM/ZSIM

Assembly language programmers: solve all your programming problems from Assem to ZSIM! ASSEM, the 3-pass editor/assembler, uses little RAM; provides a powerful line editor, is compatible with any parallel-port printer; and executes w/out modification on 16, 32, or 48K systems, w/1, 2, 3, or 4 disk drives! And ZSIM, the machine code simulator/debugger, emulates instructions using simulated registers; displays mnemonics for each instruction using ASSEM's symbol table; works as well in ROM as in RAM! Assemble directly to disk, tape or

memory—directly from disk, tape or memory! Trace program execution through ROM to debug larger, more complicated programs with speed and accuracy!

TRS-80 Disk Mod I 32K 0365RD **\$119.97**

DLDIS

The disk-based disassembler that automatically assigns labels to machine language program routines. Send the disassembly to your printer or save it on tape for editing and reassembly using Apparat's extension of EDTASM.

*TRS-80 is a trademark of the Radio Shack division of Tandy Corp.

For everyone who's tried
to top the MX-80, bad news.
We just did.

Epson.

The Epson MX-80 is the best-selling dot matrix impact printer in the world. It has been since its introduction. And despite the host of imitators it spawned, no one has been able to top it. Until now.

FX-80: Son of a legend.

The new Epson FX-80 is far more than just doo-dads added on to last year's model. It's the most astonishing collection of features ever assembled in a personal printer.

For starters, it's fast: 160 CPS. And clean. All the print quality Epson is famous for in a tack-sharp 9x9 matrix.

But that hardly scratches the surface.

Create your own alphabet.

With the new FX-80, you aren't limited to ASCII characters. You can create your own. Any character or symbol that can be defined in a 9x11 matrix can be added to the FX-80's already impressive library of type styles and stored in its integral 2K RAM.

So you can create "Sally's Gothic" or "Tom's Roman" just by downloading and modifying standard characters. Or you can create a custom set from scratch. Either way, you can store up to 256 new characters. And if you don't need a new alphabet, the RAM functions as a 2K data input buffer.

Who knows graphics better than Epson?

Nobody, that's who. And if you don't believe it, witness the FX-80.

With a 12K ROM capacity, the FX-80 gives you a few things the others don't. For example, not one, not two, but *seven* different dot addressable graphic modes are program

selectable. And can be mixed in the same print line. Everything from 72 DPI (dots-per-inch) Plotter Graphics to the 640 dots per line resolution designed to match the remarkable monitor clarity of the Epson QX-10 personal computer.

And *that* is in addition to an astonishing array of 136 different user-selectable type styles including Proportional, Elite and Italic as well as the more conventional faces you get on other printers.

Hard-to-beat hardware.

The FX-80 has all the hardware features you've come to know and love on the MX Series: logic seeking, bidirectional printing, the by-now-famous disposable printhead, and more.

The FX-80 features an adjustable pin platen or optional friction/tractor feed, so you can use fanfold, roll or sheet paper ... backwards or forwards. The FX-80 even gives you reverse paper feed.

And if you're printing forms, the FX-80 has a feature you're gonna love: a function that allows you to tear off the paper within one inch of the last print position.

Be the first on your block.

We'd be willing to bet that the FX-80 — like the MX-80 — will have its share of imitators. Don't be fooled. To make sure you get the genuine article, rush down to your local computer store right now and let them show you everything the FX-80 can do.

And while you're there ... ask them to show you how it works with our computers.

Which TRS-80* Accounting Software Do I Buy...

That's a tough question. I know, I asked it myself not very long ago. I'm Mike Motta. As president of Shawmut Systems, specialists in TRS-80* custom software, my customers were asking me for Model II and 16 Accounting Software — GL, AR, AP and Payroll. But I said "Why write the software. There must be a good package already available." So I searched for the best I could find. And I found it!

Now, when I tell you that these are the best Accounting programs I've seen on a microcomputer, you probably think that you are just listening to another sales pitch. But you're not. You're listening to a businessman with over twenty years combined experience in sales, management, and programming. So when I say that these programs will work for you, it really means something.

Each program, designed for the Model II or 16, will work with one or more floppy or hard disks. With each program, I'll include a 200 page manual written with the first time user in mind, and a set of sample data files so you can start using the program right away.

But I won't stop there. If you have a question, or a problem, call me. You won't get an operator, or order taker. You'll get me. And if I can't talk to you on the spot, I'll call you back. And I'll fix your problem. FAST.

Now I could say a lot more about these programs, but you really won't know how good they are until you try them. So, order the programs you need, and try them for 14 days. If you're not convinced that these are the programs for you, send them back, and I'll refund your money.

My price for these programs is only \$289.00 each, postpaid. I could charge hundreds more, but I want you to have the best programs at the best possible price. So mail or call your order in today. I'll make sure you'll be satisfied.

English Aid

Teachers' Friend, a series of educational programs for the Models I/III, teaches English as a second language to students who can read English at a second-grade level.

The 80 programs serve as a freestanding independent curriculum, but need not be followed sequentially. Each lesson teaches an English skill such as spelling, punctuation, parts of speech, syntax, or verb tenses. A lesson takes 10 to 15 minutes to complete, and each is geared to the student's rate of progress.

The lessons use six question formats, in personal and natural language. Students do not need microcomputer proficiency or typing skills.

Each Model I disk contains two lessons; each Model III disk, four. The price is \$15 per lesson from The Soft Spot Ltd., 800 E. Arapaho, Suite 110, Richardson, TX 75081, 214-669-1779.

Color Market Analysis

Fundgraf is an investment analysis program for the 16K Extended Basic Color Computer. It allows graphics and/or numerical comparisons for any stock or fund for any period, and gives buy and sell signals based on the calculated moving average.

In addition, the program displays graphs of prices and annual growth rates, tabulates the change in price (adjusted for dividends) for any time period, and lets you compare funds by superimposing one graph on top of another.

The tape version (\$49.95) supports files for seven funds or stocks and plots data for up to 70 weeks. For a greater number of stocks, simply

make another file tape.

The disk version (\$69.95) supports up to 52 funds and 200-week plots. A weekly file update requires about 10 and 15 minutes respectively.

Both are supplied with sample data for the Dow Jones Industrial Average and several mutual funds, and are available from Parsons Software, 118 Woodshire Drive, Parkersburg, WV 26101, 304-424-5191. Add \$2 for postage and handling.

Faster Cassette I/O

Leader Lopper, a utility for the Model I, reduces cassette input/output time by up to 80 percent, with average savings of approximately 55 percent, according to the manufacturer. It requires just 17 bytes of run-time memory, is totally invisible to your programs, and requires no hardware or software modifications.

The program sells for \$10.95 from Kensoft, 2102-50th St., Kenosha, WI 53140, 414-654-2722.

Reader Service ✓ 568

Economical Modem

The Comstar Research modem operates at up to 300 baud half-duplex (send and receive). It communicates in the originate mode, so you can talk to host systems.

The modem uses the Model I cassette port, needing no expansion interface or RS-232. Model III and Color Computer versions are forthcoming.

With software included, it sells for \$99.95 from Comstar Research, P.O. Box 771, Madison Heights, MI 48071, 313-541-4840.

Pocket Spreadsheet

Super SST is the first spreadsheet program for the Pocket Computer that uses machine-language routines

for fast operation. A typical 10- by 14-cell matrix can be analyzed in as little as 10 seconds; dozens of "what-if" projections can be made within five minutes.

The program is available on tape for the PC-2 Pocket Computer with 8K memory expansion module. A CE-150 or equivalent printer/cassette interface is required.

The price is \$49.95 (\$59.95 U.S. in Canada and Mexico, \$69.95 U.S. elsewhere) from *The Pocket Computer Newsletter*, P.O. Box 232, Seymour, CT 06483, 203-888-1946.

Pictures from VisiCalc

Datagraph transforms VisiCalc data into high-resolution scatter, line, or bar graphs. It accepts 1,000 data points and plots multiple data sets per graph, using custom symbols and line shapes.

The program plots data stored by VisiCalc or the user's own program using the DIF format. It features auto scaling, grid selection, text label entries, and selectable graph sizes from one square inch to 7 by 24 inches.

Datagraph (\$79.95) is available for the 48K Models I and III with Epson, NEC, C. Itoh, IDS, Okidata, or Radio Shack VIII/DMP-200 printers. A Colorplot version for the IDS Prism is \$89.95.

For more information, contact Micro Software Systems, 1815 Smokewood Ave., Fullerton, CA 92631, 714-526-8435.

Armdroid I

The Armdroid I, a robot arm for educational and hobby use, is available from Colne Robotics. The arm has five axes of rotation (base, shoulder, elbow, wrist up, wrist down, and wrist rotate) and a three-finger gripper; it lifts up to 10 ounces, has a gripping force of five

pounds, a 17-inch reach, and a resolution of 0.15 inches.

The firm plans to introduce accessories such as vision and tactile sensors for improved control. The Armdroid interfaces to a latched 8-bit parallel port. It sells for \$745 in kit form and \$895 complete. Software for the Models I and III (and other micros) is available at extra cost.

For more information, contact Colne Robotics Inc., P.O. Box 23416, Fort Lauderdale, FL 33307, 305-566-3101.

I/III Communications System

Ultra Term is a versatile, easy-to-use communications program for the Model I or III with any TRSDOS-compatible operating system. It features an intelligent terminal program, a self-relocating host program, and hex conversion utilities for bulletin-board downloading. The package supports any manual or auto-dial modem that accepts commands through the RS-232 port or by pulses on the RTS line or cassette relay.

A direct-to-disk file transfer allows full control from the transmitting computer, and unattended operation at the receiving end. The terminal mode's split-screen feature lets you type outgoing messages on the bottom half of the screen while incoming messages appear on the top.

The system supports both half and full duplex, lets you use printers on systems that don't send nulls after carriage returns, and allows up to a 33K input/output buffer for universal-format ASCII file transmission.

It sells for \$59.95 from United Software Associates, 734 Flamingo Way, North Palm Beach, FL 33408, 305-965-3496.

TouchMat

Flat Anti-Stat Mat

Even when you don't see or feel a spark, you may be carrying static electricity that can damage your computer. TouchMat, a three-layer static dissipative mat, lies beneath the computer, safely draining electricity via a grounding cord. Any time your hands or wrists rest on the mat, discharge is automatic.

Besides deterring static, TouchMat's cushioning material dampens noise and vibration and keeps the computer from sliding on the desktop. It is available in beige or medium brown, in 18-by-26-inch or 24-by-26-inch sizes.

Price is \$89 from Comput-erware Inc., 315 S. Third St., Stillwater, MN 55082, 800-328-0223 or 612-430-2060.

EPROM Programmer

Boulder Logical Testing Inc. (P.O. Box 902, Boulder, CO 80306) has an EPROM programmer available for under \$200 less cabling and connectors.

The programmer handles the 2716, 2732, 2732A, and 2532 EPROMs, and runs at any of four baud rates through the RS-232 port (110, 300, 1,200 and 9,600 baud). Its instruction set converts ASCII hexadecimal numbers to binary values internally; instructions include list, program, change byte,

verify, and dup.

The unit comes assembled and tested, with its own power supply. Specifications for cabling and software interface are included.

New Cassette Software

A new line of software for non-disk Models I, III, and Color Computers is available from Futureview Inc.

Their business programs, such as Check Systems (\$24.95), Electric Book-keeper (\$49.95), and Sales/Inventory (\$49.95), feature a machine-language speed sort routine. They handle data in RAM, storing information to cassette only at the end of the work period.

Other programs range from a computer typing course (\$19.95) to arcade-style games like Giant Space Slug and Wormhole (\$19.95 each). For a catalog, send a stamped, self-addressed envelope to Futureview Inc., P.O. Box 101, Joplin, MO 64802; phone orders can be placed at 417-781-6999.

CoCo Voice Hardware

Unlike software speech programs that use the computer as a makeshift synthesizer, the Color Computer Voice is built around a large-scale integrated circuit, the Votrax SC-01. It reproduces any of 64 phonemes in four inflections.

Speech is channeled through the user's TV speaker or an external speaker connected to the built-in audio amplifier. A phono connector and volume control are provided.

The Voice is completely memory-decoded, so it does not conflict with the Radio Shack disk controller. Disk owners with an expansion in-

terface produce speech with the Voice in one slot and the controller in another.

Assembled, tested, and supplied with software and manual, the Voice costs \$179.95 from Speech Systems, 38 W. 255 Deerpath Road, Batavia, IL 60510, 312-879-6880.

DIFFERENT TRACK

Allied Micro-Pak

SCM Allied Paper, a division of SCM Corp. (the Smith-Corona people), wins this month's New Products spotlight with a bold debut in "the consumables segment of the micro aftermarket"—in other words, printer paper.

Current projections put this market at \$36 billion in eight years, says SCM, a large part of that involving the home or small-business user. Until now, such users had to purchase and store continuous forms in huge quantities. SCM's innovation is the Micro-Pak—an easy-to-handle, plastic-wrapped ream, compared to the less convenient and affordable carton.

Forms available in Micro-Paks include two- and four-part carbonless blank forms; bar forms in bond, two- and four-part carbonless sets; and letterhead-quality white bond with clean perforations for a smooth edge. They are available at office supply and stationery stores, or from SCM Allied Paper, Business Forms Division, P.O. Box 125, W. Carrollton Branch, Dayton, OH 45449, 513-866-7421.

New Products listings are based on information supplied in manufacturers' press releases. 80 Micro has not tested or reviewed these products and cannot guarantee any claims.

YOU WILL NEVER AGAIN HAVE TO WASTE TIME WAITING FOR YOUR PRINTER.

MICROBUFFER* ALLOWS YOU TO PRINT AND PROCESS SIMULTANEOUSLY.

Microbuffer will instantly increase your efficiency — and eliminate the frustration of waiting for your slowpoke printer.

Now you can simply dump your printing data directly to Microbuffer and *continue processing*. Microbuffer accepts the data as fast as your computer can send. It stores the data in its own memory buffer, then takes control of your printer.

THERE IS A MICROBUFFER FOR ANY COMPUTER/PRINTER COMBINATION.

Whatever your system, there is a specific Microbuffer designed to accommodate it.

FOR APPLE II COMPUTERS, Microbuffer II features on-board firmware for text formatting and advanced graphics dump routines. Both serial and parallel versions

have a power-efficient low-consumption design. Special functions include Basic listing formatter, self-test, buffer zap, and transparent and maintain modes. The 16K model is priced at \$259 and the 32K, at \$299.

FOR EPSON PRINTERS, Microbuffer/E comes in two serial versions — 8K or 16K (upgradable to 32K) — and two parallel versions — 16K or 32K (upgradable to 64K). The serial buffer supports both hardware handshaking and XON-XOFF software handshaking at baud rates up to 19,200. Both interfaces are compatible with standard Epson commands, including GRAFTRAX-80 and GRAFTRAX-80+. Prices range from \$159 to \$279.

ALL OTHER COMPUTER/PRINTER COMBINATIONS are served by the stand-alone Microbuffer In-line.

The serial stand-alone will support different input and output baud rates and different handshake protocol. Both serial and parallel versions are available in a 32K model at \$299 or 64K for \$349. Either can be user-upgraded to a total of 256K with 64K add-ons — just \$179 each.

SIMPLE TO INSTALL.

Microbuffer II is slot-independent. It slips directly inside the Apple II in any slot except zero.

Microbuffer/E mounts easily inside the existing auxiliary slot directly inside the Epson printer.

The stand-alone Microbuffer is installed in-line between virtually any computer and any printer.

MICROBUFFER FROM PRACTICAL PERIPHERALS.

So what are you waiting for? Write to us for more information or ask your dealer for a demonstration.

When you see how much freedom Microbuffer will allow, you'll understand why it's so silly to be without one.

TRSDOS*

CP/M**

Open your doors to a world of SOFTWARE with LNW computers. You'll get **MORE PERFORMANCE*** than with the IBM PC², the Apple II³, TRS80 MODEL II or TRS80 MODEL III⁴ along with software support of TRSDOS or CP/M, the TWO MOST WIDELY USED OPERATING SYSTEMS. This means you, the user, can select from the largest base of business or personal software.

Standard Features: A serial RS232 communication port, parallel printer port, Hi-Resolution (480x192) B/W and COLOR graphics, an 80 character-per-line screen display along with Quad-density interface for 5" or 8" floppy disk storage offering immediate access to 3.5 million characters, or optional Hard disk

interface to 5 or 10 million characters.

Standard Software: LNW BASIC and DOS PLUS operating system packages, commanding all the above features, are included.

The LNW computer will be the key to your success with the starting price at **\$1695.00**, along with a full 6 month warranty.

Dealers: You too can open the door to a successful product. Call for our special dealer programs: (714) 544-5745.
